A. C. Woolner, M.A., C.I.E., D. Litt. Siddheshwar Varma, M. A., D. Litt. Gauri Shankar, M. A., B. Litt., (Oxon)—Convener.

Printed by Ralia Ram Saini, at the Mercantile Press, Lahore and published by Gauri Shankar M. A., B Litt. (Oxon)

Nehru Street, Krishna Nagar, Lahore, for the Linguistic Society of India.

FOREWORD.

It was in 1928 that the Grierson Commemoration volume was undertaken by the Linguistic Society of India. So many years have naturally involved considerable inconvenience for the writers of the various papers and disappointment to the Society. But the conditions under which the work was undertaken were far from encouraging. The phonetic types had to be originally cast in India by the Mercantile Press, Lahore, a process which required considerable time. The proofs were to be generally read by the Secretary unaided. These circumstances delayed the printing.

The Punjab University generously contributed Rs. 1000 to the publication of this work. Our thanks are particularly due to Dr. A. C. Woolner, the Vice-Chancellor.

As regards the merits of the work, we leave it to the critical public to judge them. But we cannot help expressing our supreme satisfaction at the consummation of a work embodying such a vast range of subjects.

SIDDHESWAR VARMA,

1. 1. 1936. • Prince of Wales College, Jammu.

A Biographical Note on Sir George A. Grierson.

Sir George Abraham Grierson, O. M., K. C. S. I., C. I. E., I. C. S. (Retired), son of late George Abraham Grierson, LL. D., Barrister at Law, of Rathfarnham House, Co. Dublin, was born on 7th January, 1857.

Education.

He was educated at Shrewsbury School and at the age of 17 he entered Trinity College, Dublin. There he obtained Mathematics Honours and he studied Sanskrit under Professor Robert Atkinson. There he gained Sanskrit exhibition twise and won a Hindustani exhibition—the highest rewards given by the University in those days for profesioncy in the languages. To Professor Atkinson he owes that enthusiasm for Oriental, and especially for Indian languages, with which his name is principally associated by Oriental Scholars.

Career:-

He passed the open competition for the Civil Service of India in 1871 and arrived in India in 1873. While he served in Bengal in the districts of Howrah, Murshedabad and Rangpur, he succeeded in gaining degrees of high proficiency in Bengali and Sanskrit: joined the Bengal Asiatic Society; and wrote a grammar and published specimens of the peculiar Bengali dialect spoken in Rangpur. While in Bihar he wrote his seven grammars of the Bihar Dialects and his famous Bihar Peasant Life by which his name was brought prominently before oriental scholars in Europe. In September 1894. Sir George Grierson attended the Congress of Ocientalists held at Geneva as a delegate of the Government of Bengal, of the Bengal Asiatic Society and of the Calcutta University. 1898 he was placed on special duty with the Government of India in charge of Linguistic Survey of India, a monumental work which was completed by him. He retired from the Indian Civil Service in 1903 and since then he has been interested in the study of Philology and of the various vernaculars.

Distinctions:

Sir George Grierson is a Ph. D. (Honoris Causa) 1894 of 'the University of Halle; Litt. D. (Honoris Causa) Dublin University 1902; LL. D. (Hon.) Oxford University 1929; Vagisha (Bihar and Orissa); O. M. 1923; K. C. I. E. 1912 and C. I. E. 1894. of the British Academy; Hon. Fellow of Asiatic Society of Bengal, of the Bombay Branch of the Royal Asiatic Society, and of the Royal Danish Academy of Sciences; Hon. Member of American Oriental Society; Benares, Nāgarī Prachārinī Sabha, Société Finno Ougrienne, International Phonetic Association, Bihar and Orissa Research Society, Modern Language Association, Linguistic Society of India, Deutsche Morgenländische Gesellschaft, Bangyia Sahitya Parishad; Correspondant Etranger de l'Institut de France (Académie des Inscriptions et Belles Lettres): Hon. Foreign Associate Member of the Société Asiatique de Paris: Corresponding member of the Königliche Gesellschaft der Wissenschaften zu Göttingen; late President Gypsy Lore Society: Hon. Vice-President Royal Asiatic Society: Prix Volney (Academie Française) 1905; Gold Medallist Royal Asiatic Society, 1909; Campbell Memorial Medal (R. A. S. Bombay), 1923; Gold Medal, British Academy, 1928; Sir William Jones, Gold Medal (Asiatic Society of Bengal), 1929; Church of Ireland.

Important Publications.

Handbook of the Kaithi Character; Grammar Chrestomathy of the Maithili Language; Seven Grammars of the Bihār Dialects; Bihār Peasant Life; The Modern Vernacular Literature of Hindūstān; The Satsaiyā of Bihāri; Essays on Kāshmīri Grammar; The Languages of India; Linguistic Survey of India; Pisāca Languages of North-Western India; Manual of the Kāshmīri Language; Lall Vākyāni (with L. Barnett); Ishkāshmī, Zēbākī, and Yāzghulāmi; Editor and Translator of Hātim's Tales; the Torwāli Language; Editor and Translator of Kāshmīrī Srī Krishnāvatāra Līlā; Editor of Kāshmīrī Siva P ariņaya and Srī Rāmāvatāra Carita; Editor of Waterfield's Lay of Alhā; Dictionary of the Kāshmīrī Language; translator of Vidyāpati's Purusha Parīkshā, under the title of The Test of a Man; and many papers in the Journals of Oriental Societies.

THE GROUPING OF THE INDO-EUROPEAN DIALECTS By A. Berriedale Keith

Holger Pedersen in a very interesting paper has adduced evidence to show that Italo-Celtic, Tocharian, Phrygian, and Hittite constituted at a remote period a continuous group of dialects of Indo-European, and that later these branches were violently separated, the former to dominate Europe, the latter to disappear ultimately in the sea of the nations of Asia. This thesis, which naturally is only one of the many reconstructions of the history of Indo-European suggested by the discovery of Tocharian and Hittite, deserves careful consideration.

The close connection of Italian and Celtic is proved specifically in the author's opinion by the possession by both of the passive and deponent in -r and the genitive singular of -o- stems in These characteristics may be found also, it has been suggested by Sommer', in the speech of the Veneti, and the genitive in -i is probably to be recognised in the Lepontine inscriptions which may present the speech of a Ligurian tribe. But elsewhere -i is very doubtful; in Albanian forms such as guri may stand for guroi, and be originally dative, not genitive. Nor is the significance of the use of -I destroyed even by the acceptance of the ingenious suggestion of Wackernagels that there is to be found the same -i in the Sanskrit, vasi-karoti, an idiom which is clearly closely akin to the Latin dicionis facere. This parallelism may be explained in either of two ways; it may be assumed that the original Indo-European genitive of -o- stems ended in-i, and that by the influence of the pronominal form it came to be altered, so

⁽¹⁾ Le groupement des dialectes indo-européens (1925).

⁽²⁾ Indogermanische Forschungen, XLII. 90-182.

⁽³⁾ Mélanges, Saussure (1908), pp. 125ff. The idiom is hardly known in the Rgveda, but may be old.

*ekwi. Or it may be held that the i form was originally confined to adverbial uses, which are preserved in Indo-Iranian, but was extended widely in Italo-Celtic. Thus it is possible that from a phrase such as populum regni sui facere, "to reduce a people under his sway", there might arise a populus regni mai, "a people under my sway", whence the genitive force of i might spread. Whether either of these views is correct, the fact remains that the general use of i Italo-Celtic serves to prove a distinctive connection between these speeches, comparable with that between Indian and Iranian or the Baltic and the Slav speeches.

That Tocharian is specially related to Italo-Celtic is suggested by the appearance in it of deponents and passives in -r. But it is clearly necessary to adduce much further evidence than this one point of similarity, and the question is whether it is possible to attach much weight to the proofs so far adduced.

- 1. We find in Tocharian the roots sam-, "be seated", lyam-, "lie down", and stam-, "stand". The last mentioned is clearly an enlarged form of the common root sta- which is actually found in Tocharian. There is also found beside the form sam- the unenlarged form. Probably too we have both unenlarged and enlarged forms of the I. E. root denoting "to live" seen in Greek zen, and Old Slav ži-ti, for we find sayemo, "we live", on the one hand, and sam-tsi, "to live" on the other. The latter form may be compared with the Lithuanian gem-a, Infinitive gim-ti, "enter into life". In Latin, it is pointed out, as in Tocharian the alternation was living, a fact which is significant of a close conpection. The evidence, however, for this view seems wholly
 - (1) It is true that -ī is not found in Britannic or Oscan-Umbrian but there is no real doubt of its Italo-Celtic character; cf. Meillet, Langue latine, pp. 28ff. Hirt holds-ī to be a suffix denoting appurtenance; Indogermanische Grammatik, III. 47.
 - (2) More probable is connection with I. E. gwem-; so Hirt, Indogermanische Grammatic, IV. 324.

inadequate; it consists of a comparison of premo, the Perfect press, and the Slav root per-seen in Russian perf-t, "to press". But we have in Sanskrit' side by side the roots gam-(e.g.agamat), and ga-, and dram- and dra-, and there seems no reason whatever to see any special relation between Tocharian and Italic, while it is not even claimed that Celtic shows this phenomenon.

- 2. It is pointed out that in Celtic the name Vocorii is probably to be understood as containing in its first member the word for "two", as in Tricorii and Petrucorii we have numerals as the first part of the compounds. With this is compared the fact that in Tocharian "two" is represented by wi or we, whereas save in the compound for "twenty" I. E. uses dw- or duw-. But this is inconclusive in the extreme. Admittedly the Tocharian form may merely be a development of the normal dwo- or dwi- of Indo-European, and, apart from this view, the form without d may be seen as suggested by Hirt' in Sanskrit vayam, Gothic weis, and Lithuanian vedu, and not impossibly it is to be traced in the o-u duals, if these stand for -owe.
- (3) In Tocharian we have a word for "woman" in the forms kle or k"le. With this may be compared the Irish caile, on the assumption that the original I. E. form may be put down as something like "k" llos. But in fact not merely is the resemblance insufficient, but apparently the Tocharian forms point to a feminine in -yā or -yē in Iudo-European, as was to be expected from the sense of kle.
- (4) Again Tocharian has a remarkable comitative suffix seed, and it has also sle- as a prefix with a similar sense. Comparison with the Irish cele, "companion" is suggested. The suggestion, however, is clearly implausible, for it fails in any way to explain the double ss in the suffix. That the prefix has but one is much more easily explained by the theory of the dropping of an initial letter than is the presence of a double letter in the suffix.

⁽¹⁾ Greek has tremo and etressa, didrásko and dramein. (2) Indogermanische Grammatik, III. 22.

Moreover it is not at all clear that the suffix was originally state, or not rather assole. In any case, however, it is impossible to ignore the fact that in Mitanni we have the form Mitrassil. No doubt there is a long interval in space between Tocharian and Mitanni, and thus the comparison would be invalid if we could prove that the Tocharian comitative was an innovation in Tocharian A of a late date. But unfortunately we cannot establish anything of the kind, and the similarity of form and use strongly supports the view that in this comitative suffix we have a borrowing from some non Indo-European language. In any case the parallel with only is far too remote.

(5) The Tocharian walo, who "king" doubtless has a parallel in the Old Irish flaith, "Kingdom", and kindred terms, but admittedly the root exists also elsewhere, and it is impossible to attach weight to the suggestion that krente, "good", is really a participle in -nt- transferred to the -o- declension, and comparable with the Irish care, "friend", which has a participle form. The case of the -n- suffix form kektsene, "body", illustrates well how little exclusive coincidence we find between Tocharian and Italo-Celtic. Accepting the view that -tsen-, goes back to a suffix -type, and that we are to compare Irish cucht, "external appearance", we are faced by the fact that the Irish word presupposes a quite different suffix -tu-, and that it accords exactly with the Norse hatter, "appearance, manner", where the suffix again is tu. The -tyen- suffix is doubtless, if it is admitted to exist in Tocharian, on the theory that in kektséne and in khauso the -ts' represents -ty-, parallel to the suffix seen in Latin' mentio. Irish tointiu, "opinion", etc.; but the occurrence of the same suffix in Armenian deprives the fact of importance. A further suggestion of a remarkable correspondence of suffix is based on the form waisano, "companion", this is held to be from a stem in as, as also is ailamo, "learned man". The suffix in these cases, it is suggested, must have begun with a palatal letter to explain

⁽¹⁾ E. Lewy, KZ. XLV. 365.

the s and the s respectively, and is probably to be compared with the seaffix -ivamon- of the Irish brithem, "judge". It must, however, be remembered that it would be equally satisfactory to take the first part of the suffix as -e- and to compare the Greek kedemon, and so on, thus destroying the parallel entirely. Moreover it is significant that of the two words neither has a parallel formation in Italo-Celtic, and only wasamo from was-, "dwell", has cognates in Celtic alone, not Italic. Contrast the fact that Sanskrit has the root 15-, "rule", Gothic aih, to set beside aisamo, and also the root vas-. What is wanted for purposes of proving close connection is not mere possession of the same roots, but of the roots used in the same formations and these of a rare character, a phenomenon absolutely lacking in the cases adduced. It must be added that it cannot be taken as absolutely certain that in klautso or wasamo we are really dealing with -n- stems.

- (6) This point becomes of importance when we consider the suggestion that Tocharian witsako, "root", ought to be regarded as having the suffix which is seen in the Latin plantage, ferulage etc. The fact is that the word witsako is not declined like a stem in -n-, for it gives witsakai, and there is no reason whatever to assume that there is a confusion of -n- stems and feminines in -ā-. It is, therefore, unimportant that Gaulish knew the same suffix as Latin, nor, it may be added, does it seem possible to hold that there is connection with the Greek word for "root". Still less is it acceptable to treat palsko, "thought", as an -ago- stem. It is worth noting that here again there is no adduction of any Italo-Celtic parallel for the root, which instead is compared with Sanskrit nibhālayati, "he observes", and Old High German bilidi, "image".
- (7) The greatest stress is laid on the identity in Tocharian, and Italo-Celtic of the word for silver, Tocharian ārkyante Italian argentum, Old Irish argat. But after all we must assign to the same root "areg the Sanskrit rajata and the Greek arguros"

as well as the Armenian arcath, and the Avestan eresats, and it is impossible to lay any stress on the argument; we may as well look to Avestan and Armenian as to Italo-Celtic for the parallel. Similarly nothing can be made out of the possession by Tocharian of a parallel for Latin aurum, which is not shared by Celtic, for Lithuanian and Old Prussian have auksas and ausis. What is clear is that Tocharian shows constantly points of contact with one or another Indo-European speech, but without any clearly marked affinity to one special group. Thus, if we accept Pedersen's own views, we have an amazing parallel to Greek ethélo in yselme "desire", the y corresponding on this theory with the Greek e2, and again in aitsi "to give", we have a parallel of the Greek aisa,3 which has an Oscan cognate in aiteis. genetive, meaning "part", the semantic development being comparable to that between the Greek eporon, "I gave" and he pepromene, "fate". There are many other parallels which have been adduced by other writers to support Italo-Celtic affinities for Tocharian: but it is needless to go into them, for they are neither more nor less cogent than the instances already discussed. Quite as remarkable as anything else is the fact that in Tocharian soye we have a parallel to the distinctive Greek word for son, and there are other points in which we can find a remarkable similarity between Tocharian and Greek. So again it has been suggested by Hermann' that there is a certain affinity between Tocharian and Phrygian which he regards as a centum speech. It is not necessary to accept the latter suggestion, which runs counter to the view, based on the testimony of Herodotos and Eudoxos, which holds that the Armenians were an offshoot of the Phrygians. Armenian is unquestionably a satem speech, and

(2) For this prefix see Hirt, Indogermanische Grammatik, IL 166.

(4) KZ. L. 302ff.

⁽¹⁾ Walde, Vergleichendes Wörterbuch der indogermanischen Sprachen, I. 82.

⁽³⁾ Cf. Hirt, op. cit. II. 182.

though there is a lack of absolutely conclusive evidence, there is a good deal to suggest that Phrygian was really a satem speech. Pokorny again has suggested that there is much in Tocharian akin to Armenian, and the evidence for his thesis is quite as good as that for affinity with Italo-Celtic. The truth is that in no case have we such a number of striking identities in formation and vocabulary that it is possible to postulate any close affinity.

There remains, therefore, as the ground for asserting a special connection of Italo-Celtic, Tocharian and Phrygian nothing more substantial than the middle and passive forms in -r. Armenian forms in -r might also be adduced to extend the number of connected speeches, but Pedersen, despite Meillet's arguments, does not himself believe that the Armenian forms bera-r. "you have been carried", and bere-r. "he carried", or "he was carried" have anything historically to do with the -r forms of the other languages. The matter is further complicated by the evidence of Hittite². That strange speech seems to add -er or -ir to form preterite third plurals; thus kuenzi, "he kills". kuenta, "he killed", and kuennir, "they killed", dai, "he takes", das, "he took", and dair, "they took". On the other hand -ri is added to terminations of medio-passive forms, without alteration of the meaning and only facultatively, so far as can be judged: thus we have the third persons present kis-a or kis-ari, iya-tta or iva-ttari: third plural iva-nta or iva-ntari. In the Imperative we have corresponding forms in -ru, kis-aru, iya-ttaru, and iya-ntaru. Hittite thus provides parallels for the Latin forms; -tari being akin to -tur, -ntari to ntur, while the -ari forms remind us of Old Irish berir, "he is carried", and Oscan sacrafir, "let one sacrifice" (if this is the meaning; the verb may really be passive). The Phrygian evidence is confined to addaketor, which stands beside the simple addaket, corresponding to Latin afficit.

⁽¹⁾ Berichte des Forschungsinstituts für Osten und Orient in Wien III.

⁽²⁾ E. H. Sturtevant, Language, IV. 165 ff.

Pedersen's view is that the -r forms are an innovation which never belonged to more than a part of the indi-European family, in which he inclines definitely to include Hittite. But, even if Hittite is not to be treated as Indo-European in the usual sense, but to be held to be a sister speech of Indo-European, he helds that in the period before the separation of the two families of speeches, Indo-European and Hittite, there must have sprung up in the area separate dialects, one of which possessed the -r conjugation. The alternative, of course, is to hold that the -r formations have Indo-European status.

The evidence of Sanskrit on the whole favours the view that Indo-European knew -r formations, but that the several branches of the family have gone their own way in developing their use. The same remark applies to Hittite, whether it is regarded as a member of the family or a mere cousin speech. The use of the forms as given above is clearly specialised, and the same remark appears to apply to Sanskrit. We have the common -ur as the termination of the third plural Perfect, e.g. vidu'r; the Optative syn'r, the Aprist adur; it is added to the second dual and third Perfect as in bubudhathur, bubudhatur, or again -r is followed by other endings as in the regular Perfect Middle bubudhire and even bubhujrire; in the third plural Aorist Middle we have -ran or -ram, as in adrsran or adrsram, abudhran, or sbudhram, while more sporadically we have forms such as duhré, duhráte, duhrám, duhratām, and aduhra. It will be seen that both Active and Middle forms are found, but, save in so far as outside the Present system Middle forms afford the Passive in Sanskrit, there is no special connection between -r forms and the Passive. When we remember the existence of Latin stetere, Tocharian stare and the Hittite forms, it seems legitimate to suppose that, whatever the source of the -r formations, there was nothing essentially Passive connected with them at the earliest stage.

⁽¹⁾ Ibid. II. 25-34; IV. 169f. cf. Kretschmer, Glotta, XIV. 300-19.

Zimmer', as is well known, traced the origin of deponents: and passives alike to the Indo-European use of a third plural-Active in -r: thus a hypothetical *widr, "they see", passes over. to "one sees", and thence to the impersonal Passive "it is seen". This is supported to some extent by such cases as the Umbrian, pone esonom-e ferar, "when there is carrying to the sacrifice;" Latin vitam vivitur; Old Irish doberr or doberar, "they give," "one gives"; Breton gweler, "they see", "one sees". On the other hand it is pointed out that Tocharian does not show signs of an impersonal use of -r forms2, and that the same is true of Hittite, so far as we at present know it. Stress instead has been laid on the view that the Passive is a natural development from the Middle which, unlike the Passive on one view, is Indo-European, and it has been suggested that -r formations are naturally connected with deponents. In that case Indo-Iranian in its use of -r formations has often employed them in an Active sense, as has also Latin in the fectre type, and it may be doubted whether the connection can be sustained for Indo-European; Again the impersonal use in the third singular is deemed by Ernout among others to be the original; he points out that it is common to Italian and Celtic. The deponents of Italic and Celtic seem to have taken over this -r. It is true that Walde held that it was in Gaelo-Latin as a unity that the deponent developed, to the exclusion of Britannic on the one hand, and Oscan-Umbrian on the other; but though the evidence of Britannic deponents is not strong, it is improbable that they were unknown, and Umbrian

(2) Vendryes, Revue Celtique, XXXIV. 113.

⁽⁴⁾ Morphologie historique du latin (1927), pp. 181, 195 ff. (5) ither älteste sprachliche Beziehungen zwischen Kelten und Italikern (1917). Contrast Vendryes, Revue Celtique, XLII. 387 ff.

is credited with herter, "he desires" and Oscan with karenter, possibly, "they feed themselves". Nor generally is it possible to accept Walde's ingenious suggestion.

It is clearly impossible to arrive at any certain results as to the mode in which the -r suffixes developed, but the important point for the purpose of dialect grouping is that Tocharian shows nothing of the impersonal use of -r which is clearly Italo-Celtic, and thus cannot on that ground be grouped closely with Phrygian and Hittite are in like case with Italo-Celtic. Tocharian in not showing evidence of this impersonal use, which we may, therefore, regard as specifically Italo-Celtic, either in the sense that it developed in Italo-Celtic or that it was preserved in Italo-Celtic from Indo-European, while it died out in other Indo-European dialects. The theory, therefore, that Italo-Celtic, Phrygian and Tocharian once formed a continuous series of dialects marked by the innovation of the -r conjugation cannot be held to be plausibly proved by the grounds so far adduced. There is, of course, no objection a priori to any theory of dialectic grouping, but the question is of the extent to which such a group can be established as more probable than another. That Hittite and Tocharian have certain remarkable similarities is perfectly true, but the same remark applies equally to Hittite and most of the other dialects, and we certainly cannot prove the continuity of Hittite and Tocharian from the material available. Indeed, in view of the great difference in date between our records of the two speeches, it would be extremely difficult to expect to find sufficient proof of early contiguity.

As regards the -r suffix it may be added that it is unreasonable to treat as impossible the suggestion that it orginally was the characteristic of the impersonal verb, as taken by Morris Janes among others. The idea that such an impersonal could

Claffin, Language, V. 233, 241.
 Welsh Grammar (1913).

pages over to the service of the third person plural as in Sanskrit -ur and -re or -ire is certainly not more difficult than Zimmer's view that the third plural Active in -ur could pass over to a Passive sense. It may really be the case that the Indo-European possessed this impersonal in -r, and that the variant uses developed separately in each of the dialects or groups Indo-Iraniau, and Italo-Celtic. The Hittite evidence, so far as it goes, shows the most regular uses of -er or -ir as the suffix of a preterite, just as in Sanskrit the third plural perfect Active and Middle is the special form of which -r forms a part. That an impersonal verb expression should be used to denote past time is certainly not surprising.

The origin of -r has often been seen in a locative suffix used predicatively as in the case of the suffix i seen in the Infinitive, e.g. Latin agere or Sanskrit drsi. We have -r in such a use often in Germanic, e.g. Gothic her, but also in other languages, as in Latin quor, and apparently in Greek gar, and in -per, Latin paulisper. Hirt, on the other hand believes that we have in -r a particle of the type seen in that use in Greek ar, ra, and he compares Greck ? ra "he spoke" with Sanskrit āh-ur, "they say", stê ra with asthur, and so on. It is impossible to arrive at any conclusion in the absence of decisive arguments, but either hypothesis is at present preferable to any attempt to revive the once prevalent idea, still maintained by Pedersen, that in the -r we should find a trace of the reflexive se, a view which is untenable in the absence of any proof that outside Latin s became r. An alternative suggestion, that r at an early period itself had a sense similar to se, is not specially attractive; we have no satisfactory proof that the force of -r was primarily reflexive, which is certain-

ly not borne out by Sanskrit or Hittite. It is noteworthy that Redersen himself in his later discussion of the grouping of the dialects does not pronounce definitely in favour of any theory. He refers to the suggestions in Ode's work, but insists that it is to Celfic that we must look if at all for the possibility of tracing the development of the use of r, in view of the linguistic particularism which has, on the one hand, produced so many bizarre forms in the later development of the language, but on the other has preserved many irregularities removed in other speeches. It is. however, difficult in view of the late date at which Celtic is recorded to distinguish between what is novel, and what is old material preserved. Thus there is a complete divergence of view between those who, like Pedersen, claim that the Celtic passive is ancient by reason of peculiarities of form and syntax, and those who contend that it is a secondary development and that originally deponent and Passive coincided as in Latin. Nor is it possible to accept as cogent Pedersen's view that there was no Passive in Indo-European, a doctrine which influences his view that -r Passives were a dialectical innovation.

SYANDANIKĀ.

By Sylvain Lévi.

Le Karmavibhāga sūtra est un texte encore inédit dont j'ai trouvé au Népal, en 1922, deux manuscrits, entièrement indépendants l'un de l'autre, coupés l'un et l'autre de lacunes qui fort heureusement ne coincident presque jamais. un ouvrage qui a dû connaître une popularité extraordinaire puisque je l'ai retrouvé en tibétain, en chinois, en koutchéen, et qu'il a servi de texte aux illustrations de la galerie inférieure au Boro-Budur de Java. Ecrit dans un sanscrit fort classique, il foisonne de citations curieuses. Je compte en donner au cours des années prochaines une édition et une traduction complètes avec les textes parallèles. moment, je me contente de signaler un mot qui peut être intéressant pour le linguiste, et spécialement pour ceux qui, comme l'illustre auteur du Bihar Peasant Life, ne séparent pas l'étude des mots de l'étude des choses.

Le Karmavibhāga s'ouvre par l'histoire de Śuka Māṇavaka, fils de Taudeyya. Le Bouddha en tournée de quête à Śrāvastī se présente au seuil de la maison, en l'absence du Maître. Le chien favori de Śuka aboie méchamment. Le Bouddha qui a reconnu dans l'animal le père même de Śuka, à qui son avarice a valu cette fâcheuse renaissance, lui rappelle son passé par une allusion que seul le chien peut comprendre. Le chien, humilié, saute de la couchette matelassée où il se prélassait, et va se tapir dans la syandanikā de bois (evam ukte śankhakuñjare 'tiśayitaroṣaś caṇḍībhūto 'nāttamanā goṇikāstṛtāt paryaṅkād avatīr-yādhastāt paryaṅkasya dārusyandanikāyām niṣaṇṇaḥ).

Le mot syandanikā paraît avoir embarrassé les interprètes. Un texte chinois traduit par Guṇabhadra dit "Il descendit du matelas de son lit et alla en bas du seuil de la porte" (S 門 殿 下) Un autre texte chinois, traduit par

T'ien Si tsai dit: "Il quitta la place où il était et s'en alle sous lecture candanikāyām. La traduction du Śukasūtra dans le Madhyama Agama Tok. XII, 7, 16, a: "Il descendit de sa litière et s'en alla prés du tas de bois" 木 聚. Pourtant le mot syandanikā est connu par ailleurs: Le Pet. Wört. l'enregistre avec une référence au Rāmāyana III, 53, 56 de l'éd. Gorresio-47, 45 de l'éd. Bombay. Sita menace son ravisseur de la vengeance que Rāma saura tirer et compare dédaigneusement Ravana avec son époux: "Il y a entre toi et lui autant de différence qu'entre un ruisseau et l'Océan" (yad antaram syandanikāsamudrayoh). Syandanikā doit donc désigner un tout petit cours d'eau. La trad. donnée par T'ien Si tsai "un siége de santal" atteste que certains Mss. avaient substitué à ce mot la forme candanikā que l'interprète n'a pas su comment traduire. Mais ce mot candanikā, ignoré en sanscrit, est bien connu en pali. Le Dict. pali de la P.T.S. le rend par: "a pool at the entrance of the village (usually, but not necessarily, dirty)" et donne une longue serie de références qui sont insuffisantes pour préciser le sens. Le mot est en général accolé à un autre mot, oligalla, qui est également obscur. Pourtant un passage du Visuddhimagga, p. 343 est nettement en contradiction avec la trad. du Dict. pali; le texte énumère toutes les saletés et les ordures qui encombrent la porte de la maison: tam tam gehadvāram patvā macchadhovanamamsadhovana-tanduladhovana-khalasimghānika-sunakha-sūkaravaccādīhi sammissāni kimikulāni nīlamakkikaparikinnäni oligalläni ceva candanikatthänăni ca dațthabbāni honti: "En arrivant à la porte d'une maison ou d'une autre, la vue tombe fatalement sur les oligalia et les emplacements de candanika où les vers et les mouches se mêlent aux eaux de lavage du poisson, de la viande, du riz, avec les crachats et les morves, avec les crottes des chiens, des porcs etc.

On peut serrer davantage le sens. Et cependant, par une étrange fatalité, la plupart des textes palis donnés en référence n'ont pas de correspondants connus en chinois, et dans le cas bien rare où le texte correspondant existe en chinois, les interprètes embarrassés semblent avoir laissé de côté le mot. Dans le sûtra du Madhyama Agama Tok, XII, 7, 46a col. 16 qui correspond au Latukikopama sutta du Majjhima Nikāya I, 448, et où reparait une énumération analogue (à celle du Visuddhimagga ci-dessus, il semble bien que les caractères keou tou 溝 濱 correspondent à candanikā; keou 溝; signifie "fosse, rigole"; la Mhvy. 奮 et 勧 l'emploie pour traduire parikhā d'enceinte"; tou désigne un canal destiné à l'arrosage des champs. Dans le sūtra du Samyukta Āgama XIII, 3, 76a qui répond au Brāhmana-sutta de Samyutta V, 361, au cours d'une énumération assez analogue ("Va droit devant toi; n'évite ni humeurs, ni précipice, ni troncs d'arbre, ni épines, ni candanikā, ni oligalla") le chinois kien 湄 en regard de candanikā; kien désigne un cours d'eau resserré, un ruisseau. Dans le Vacchagottasutta de l'Anguttara I, 161, candanikā et oligalla sont les endroits où on déverse les eaux de vaisselle et où grouille la vermine; le sūtra correspondant se trouve dans deux versions du Samyukta Tok. XIII, 2, 21a et 5, 84b, mais les deux traducteurs se contentent de dire; "là où l'on jette les eaux de lavage de la vaisselle et les résidus de nourriture".

Il ressort de tous ces exemples que candanikă est exactement ce que nous appelons "le ruisseau", la rigole plus ou moins prosonde par où s'écoulent les eaux ménagères au devant de la maison. Le mot est donc une simple déformation du sanscrit syandanikă, déformation voulue, consciente, d'intention ironique: les puanteurs du ruisseau évoquaient par antiphrase le parfum du santal.

Quant à l'expression composée dāru-syandanikā "le ruisseau (la rigole) en bois", on en a le parallèle cant le Vineya

pali, Cullavagga V, 17 où sont réunies les prescriptions relatives au bain des moines: "Les Mendiants se baignaient partout dans le jardin et le jardin était tout fangeux. On en fit rapport au Très Saint. "Je vous permets, Mendiants, la candanikā ", dit-il. La candanikā était à ciel ouvert; les Mendiants étaient gênés pour se baigner. "Je vous permets, Mendiants, dit-il, trois sortes de murs à l'entour: mur en briques, mur en pierre, mur en bois (dāru)". Suit une prescription relative au pavage du fond (santhāra), qui peut être fait également en briques, en pierre ou en bois. La syandanikā (pali candanikā) était donc l° la rigole d'évacuation des eaux ménagères qui partait de la cuisine pour rejoindre le ruisseau, 2° le ruisseau lui-même, c'est à dire la tranchée creusée dans la rue au long des maisons. La rigole domestique pouvait être tout entière en bois, creusée dans du bois plein ou formée de lattes assemblées, ou être revêtue de boisage pour empêcher les terres d'être entraînées par l'eau; le Japon contemporain montre encore partout, dans les grandes cités comme dans les villages, ces tranchées boisées, tantôt à ciel ouvert, tantôt couvertes avec des dalles de pierre. Leur existence dans l'Inde ancienne est attestée par la Śukraniti I. 352:

mārgān pārśvakhātān nirgamārtham Kurvān jalasya ca "Il faut faire, pour l'écoulement des eaux, des conduites creusées sur les côtés (de la rue)". M. Binode Behari Dutt, à qui j'emprunte cette citation, rapporte en outre dans son livre vraiment remarquable; Town Planning 1925—un Ancient India. Calcutta \mathbf{des} travaux publiés au cours de ces dernières années-un passage d'un livre récent que je n'ai pu consulter directement, Town Planning in Ancient Deccan, par M. Venkataram Ayyar, passage qui semble écrit à dessein pour éclairer la question de la syandanikā-candanikā: "As in other cities, so also in Vanji the ditch encircled the walls of The water from the palace, public halls, and private residences fell into this ditch by means of a conduit

١

sluice known as Tumbu. The conduit-pipe discharged the water of the city into the ditch near the entrance gate where it was covered over with a stone culvert. By such a drainage system, the water used in private homes for domestic and bathing purposes, was conducted by pipes into the main conduit which poured its contents into the ditch. Those who could afford the expense had separate baths specially constructed for them in such a manner that water might be filled in or let out of such baths at their pleasure. When they had finished bathing they opened the outlet of the baths which emptied water into the drain which led to the ditch outside."

Observons encore que dans le récit correspondant en pali, Sumangala Vilāsinī, éd. siamoise I, 437 (récit très étroitement apparenté à notre texte) le chien mécontent va se coucher dans les cendres à l'intérieur du fourneau (uddhanantare chārikāya nipanno); ici encore l'obscurité du terme candanikā paraît avoir décidé le narrateur à lui substituer un autre mot et une autre chose, plus facilement intelligibles.

J'ai fait usage, chemin faisant, des récits parallèles que j'ai rencontrés en pali. Notre Karmavibhāga sūtra est le développement du sutta pali intitulé Cūļa Kammavibhanga qui forme le 135e sutta du Majjhimanikāya Le personnage à qui ce sutta sur la classification des actes est adressé y est appelé Subha Māṇava Todeyyaputta; le commentaire sur ce texte, dans la Papañcasúdani (éd. Siam. III, 648) raconte en guise d'introduction l'histoire du Bouddha et du chien qui est rené le père de Suka. L'identité est donc incontestable. Le même Subha Māṇava Todeyyaputta reparaît dans un certain nombre d'autres textes que nous laisserons ici de En face du pali Subha, la forme sanskrite Śuka est attestée non seulement par le Karmavibhaga, mais aussi par les textes chinois correspondants ou apparentés qui rendent. ce nom soit par une transcription: Chou kia, soit par une traduction "Perroquet". Le tibétain, contrairement à sa

pratique générale, ne traduit pas le nom et se contente de le transcrire. Nous avons donc d'une part Suka, de l'autre Subha (sk. Śubha). On ne peut passer directement d'une de ces formes à l'autre; ni Suka n'a pu aboutir à Subha ni Subha à Suka. Il devient donc nécessaire de supposer à la base une forme antérieure d'où auraient pu diverger deux restaurations différentes. Le mot Suka est dans les pracrits, et notamment dans le pracrit jaina où il se rencontre fréquemment comme nom de personne, Sua susceptible de se développer en Suva (= sruta, suta, etc.). De l'alternance bh pali en face de v par ailleurs, nous avons tout au moins un exemple dans un des termes les plus importants de la théorie du saint bouddhique; le pali a patisambhida tandis que le sanscrit a pratisamvid. Nous sommes ainsi ramenés par un nouvel exemple à la théorie que j'ai eu l'occasion de présenter, il y a déjà longtemps, sur l'emploi dans le bouddhisme ancien, antérieurement au pali et au sanscrit, d'un dialecte disparu, cousin germain de l'ardhamagadhi jaina, et qui avait atteint déjà un stage avancé d'usure phonétique (Cf. Journ. Asiat., 1912, II, 495-514).

Le mot syandanikā avait déjà attiré l'attention du Rev. Richard Morris, dans la série des Notes and Queries où se rencontrent tant d'indications importantes. du mot ekodibhāva (Jour. Pali Text Soc., 1885, p. 35), dont il propose d'ailleurs une interprétation fausse, il est amoné à eiter le mot oligalla, et oligalla attire candanikā dont il est presque inséparable. Il signale l'usage, du mot syandanikā dans un passage du Saddharma Pundarika (Chap. VI. éd. Kern-Nanjio, p. 144, l. 10) que d'ailleurs il connaît seulement par la traduction de Kern (Sac. Books, Vol. XXI). et il écrit: "A very good instance of this sanskritizing process [la marotte des Palisants de cette époque!] in the Saddharma Pundarika (pp. 142, 146, 395) which has escaped the keen eye of Prof. Kern, is seen in syandanika [corr. kā, que donne bien le texte sanscrit imprimé]-gūthodilla (var. lect -odigilla, -odigalla) translated by 'gutters and dirty

pools. Prof. Kern acknowledges that his rendering of guthodilla is conjectural. Here we may call in Pali to throw some light upon the whole compound syandanika°. Not seldom we find the Pali terms candanikā and oligalla occurring together (see Anguttara Nikaya, III, VI. 8: Milinda Panha, p. 220; Sabbāsava Sutta) the former meaning, according to the Abhidhanappadipika, 'a dirty pool at the entrance of a village'. The Pali candanikā is probably to be referred to a more original candanikā, from the root cand, and signifies a turbid pool, or one liable to become so on account of not being inclosed (see Thera Gatha, 1, 567; Cullavagga, V. 17, 1). Buddhaghosa defines it as asucikalalakūpo. The Sanskrit syandanikā, according to the lexicographers, does not mean a tank, well, or pool, but 'a drop of saliva', and the meaning 'gutter' given to it by Prof. Kern, is deduced by him from the root syand (syandana, oozing water). It is one of those words that may be restored to its primitive form since it is in fact a clever sanskritizing of Pali candanikā."

Morris discute ensuite le terme gūthodilla associé à syandanikā dans le texte du Saddharmapuṇḍarīka. Uḍilla serait une sanscritisation (une de plus) faite sur le pali oligalla, qui pourrait être une altération de allagalla, "from alla wet" (ulla, olla well-known Prakrit forms, Sanskrit ārdra) "swampy, marshy" and galla, Sanskrit garta, Prakrit gaḍḍa "well, pit". Et il ajoute sagement: "But all this is by way of conjecture".

Pour ajouter une conjecture de plus, je signale que, d'après un informateur hindou venu de Madras (M. Venkatachalpati), le télougou a ōḍagalavādu pour désigner "le nettoyeur, le boueux" (où vādu est un simple suffixe d'emploi analogue à wāla de l'hindoustani). Le tamoul possède aussi le mot ōḍugāl pour désigner une "conduite d'eau", comme me l'indique mon collègue M. Bloch.

Enfin la substitution de chārikā "les cendres" "dans le récit pali à syandanikā de la rédaction sanscrite peut

remonter à une confusion entre kṣāra'' caustique "et kṣara'' coulant.

Burnouf qui n'avait pas rencontré le mot dans le premier des Mss. sur lequel il traduisait et où ce mot est omis, n'a rien naturellement qui puisse y correspondre dans sa traduction; mais dans ses notes sur le chapitre VI (p. 385), il observe que les deux Mss. de Hodgson, qu'il a pu consulter depuis, lisent syandanikā devant gūthodillam ce qui ajoute (dit-il) à la précision de l'idée, car syandanikā peut répondre au sanscrit syandinī et signifier "salive".

Aucune des trois traductions chinoises du Saddharma Puṇḍarīka n'apporte d'éclaircissement sur ce passage; elles se contentent toutes trois d'écrire: "sans ordures".

M. Grierson, à qui cette note a été commniquée en manuscrit, me signale que syandanikā survit encore en hindi comme mot tatsama, et qu'il est enregistré dans le Dictionnaire de le Nāgarī Prachāriņī Sabhā, le Hindī Sabda Sāgara, pp. 37–36, avec le sens de "salive", "petit ruisseau", et "conduite d'ean, rigole (nahar)".

REMARQUES SUR LES VERBES DE MOUVEMENT E INDO-EUROPEEN

By J. Vendryes

Dans un article des Mémoires de la Société de Linguistique (t. XXIII, p. 264 et ss.), M. Meillet a attiré l'attention des linguistes sur la distinction du déterminé et de l'indéterminé dans les verbes de mouvement en grec. Un examen sommaire permet de reconnaître la même distinction en celtique (cf. 'Rev. Celtique, t. XLVI, p. 215 et ss.). Il s'agit d'un fait général, qui devait en indo-européen tenir une place importante et dont il est possible de marquer des maintenant certains caractères.

Un verbe indo-européen pouvait etre employé avec ou sans régime, c'est à dire que le proces pouvait etre considéré comme portant ou non sur un objet. En latin, amo signifie "j'aime", amo patrem "j'aime mon pere". Dans un cas, le proces est considéré en lui-meme, avec toutes les modalités qu'il comporte; dans l'autre, il s'étend à un objet qui peut meme devenir l'élément prépondérant, en exprimant la raison d'etre du proces. Considéré en lui-meme à l'exclusion de tout objet, le proces, confiné dans l'activité du sujet, prend aisément une valeur neutre ou meme réfléchie: pipo ti veut dire en grec "je porte quelque chose", comme en latin uerto id "je tourne cela"; mais pipo et uerto, tout court, veulent dire "je me porte" ou "je me tourne".

Cette distinction vaut pour la plupart des notions verbales. Elle est toujours possible en indo européen, grace à l'autonomie des mots, qui résulte des conditions me nos de la morphologie (cf. Meillet-Vendryes, Traite, p. 519). Mais pour certaines notions la distinction est tellement importante qu'elle se traduit dans le vocabulaire par l'emploi de mots différents. Elle n'est pas seulement syntaxique, mais aussi lexicographique: à côte d'un verbe ayant la valeur déterminée, il existe alors un verbe tout différent qui est indéterminé. Ainsi en français pour la notion de "parler". Le verbe dire est déterminé: il ne se conçoit pas aujourd'hui sans l'addition d'un régime indiquant ce que "dit" le sujet. Au contraire le verbe parler, qui est indéterminé, ne

comporte dentre régime que ceux qui portent sur les modalités variées de la parole. Le fait est ancien. En latin le verbe dicere est déterminé, comme le grec deservous et le gotique teihan; cela explique le sens particulier qu'ent pris ces verbes en grec et en germanique, celui de "dénoncer, accuser".

Les verbes déterminés sont relativement stables: le verbe latin dicere survit encore aujourd'hui dans toutes les langues romanes. Au contraire les verbes indéterminés sont éminemment instables: ils s'usent vite et se renouvellent fréquemment. Les diverses langues indo-européennes présentent pour l'idée de "parler" les verbes les plus variés, souvent d'origine inconnue: à ce point de vue même, les langues romanes ne s'accordent pas, et en en français populaire on remplace aujourd'hui le verbe parler par un bon nombre de synonymes (causer, bavarder, jaspiner, etc.....) C'est que le verbe indéterminé comporte des nuances affectives dont le déterminé est dépourvu. Par l'emploi du déterminé, le procès se présente sous sa forme brute, dépouillé de circonstances accessoires. En employant l'indéterminé, le sujet parlant s'exprime hi-même, manifeste l'action de sa personnalité sur le proces que marque le verbe. Amsi s'ajoutent à l'idée du procès des modalités variées qui entrainent un renouvellement fréquent de l'expression.

Un procédé dont usait l'indo-européen pour renouveler l'expression d'une notion - en dehors de l'emploi d'une racine différente - était l'élargissement de la racine. L'addition d'un élément phonétique à une racine donnée permettait de souligner certains caractères particuliers de la notion verbale. Peu importe l'origine de cet élément phonétique; il est permis de penser qu'il n'était parlois qu'un débris morphologique de dérivation ou de composition. Il ajoutait en tout cas a la racine une nuance de sens souvent compatible avec l'emploi indéterminé. Ainsi dans le cas de la racine marquant le "tremblement" d'où l' "effroi": "tre-m-, "tre-p- à côté de "ter- (skr. tarala-). On peut dire que la présence d'un élargissement est un indice que la racine était employée avec une valeur indéterminée.

Un autre indice de même ordre est dans 'existence d' une formation de causatif. Lorsqu'on impose un acte à quelqu'un, l'essentiel n'est pas que cet acte porte sur tel ou tel objet, mais bien que l'acte lui-meme se produise. C'est bien pour que quelqu'un dise quelque chose qu'on le fait parler; mais l'important est qu'il parle, c'est à dire qu'on le décide à parler. Un aphrodisiaque fait aimer, comme l'opium fait dormir; la personnalité de l'être qu'on aime est secondaire.

Les observations qui precédent éclairent l'histoire et la formation de certains verbes de mouvement. C' est dans les yerbes de mouvement qu'apparaît le plus nettement l'opposition du déterminé et de l'indeterminé, suivant qu'on considère le mouvement comme comportant un certain objet ou un certain but quilui serve de terme (agit boues, peto urbem), soit qu'on se borne à la considération du mouvement en lui-même avec ses diverses medalités (bene ou male agit, ambulat in horte.

La présence d'un élargissement implique indétermination: a côté de la racine * ei- (cf. skr. v.d. sabham eti, lat. eo Romam), il existe une racine * eit-, qui est nettement indéterminée (cf., Bull. Soc. Lingu., XXV, p. 45), comme suffiraient à le prouver en latin iter, en osque eituns, en grec iranés "hardi, impudent" et peut-être en germanique et en celtique le nom du "serment", got. ai ès, irl. oeth.

Lorsqu'une racine de verbe de mouvement comprend un élargissement et sert en plus à former un causatif, on est doublement assuré que la valeur de ce verbe était indéterminée. C'est le cas des racines * leudh-, * leit-, * sent-.

La racine *leudh- sort d'une racine *leu-, attestée en grec dans ελήλυμεν et dans προσ-ήλυτος; un autre élargissement apparait d'ailleurs dans la racine *leugh- des formes sanskrites aruhat, arukṣat, rokṣyati, rūdhaḥ "grandi, accru" et dans la racine *leup- du skr. ropṣyati "il fait grandir, il sonlève". C'est de *leudh- que sortent à la fois les formes gr. ελώσομας πλύθρης

got: Mudam, skr. rodhsti; la formation nominale anterpos en montre bien le caractère indéterminé. Et l'on a le causatif correspondant dans l'irlandais luadim "je mets en mouvement, je lance", particulièrement employé au figuré luadim molad "je développe, je fais grandir la louange".

Dans les racines *leit- et *sent- l'élargissement est moins apparent, mais elles ont toutes deux fourni des causatifs: le germanique a v. h. a. leiten v. isl. leida en face de got. lei ban v. h. a. lidan, comme got. sandjan en face de sin ban. Le sens figuré de v. h. a. lidan "éprouver, souffrir" s'explique par la valeur indéterminée du verbe. On observe aussi un sens figuré dans le dérivé latin de la racine *sent-, à savoir sentio.

Deux autres racines marquant un mouvement se présentent avec des élargissements qui en précisent la valeur: c'est d'une part *ser. d'autre part *drā. La première, bien attestée par le sanskrit sisarti et sarati a fourni sous la forme * serp- le sanskrit sarpati "il rampe" (lat. serpo) mais aussi le grec ἔρπω qui signifie seulement "je vais". La spécialisation au sens de "ramper" s'accorde bien avec la présence d'un élargissement. Sous la forme * serg-la même racine a donné au sanskrit le verbe sariati, sristi. La seconde, attestée dans le grec soay et le sanskrit drati est pourvue d'élargissements vari-és dans skr. dramati, gr. ξρόμος ou dans le skr. drávati. Un aufre élargissement apparaît dans le causatif sanskrit drapayati, qui suppose une racine de forme * drap., dont l'antiquité est attestée par le grec spanions "déserteur". Ce fait pourrait suggérer une explication du suffixe de causatif sanskrit -payeti, dont l'origine est énigmatique (cf. Sutterlin, I. F. XIX, 536; Thumb Handb. d. altind., I, 403; Brugmann, Grdr., 2° ed., II, 3, p. 256; et P. Persson Beitr. z. idg. Wortfschg., II, 592). On sait que le sumxe de causatif se présente régulièrement sous la forme -payati dans les racines qui se terminent par une voyelle: dadhāti "il pose", dhāpāyati "il fait poser "; snātī "il se baigne", snāpāyatī all fait baigner, il plonge quelqu'un dans l'eau" etc., et dans un

verbe de mouvement, yati "il va" (déterminé; cf. yad ajím yati "quand il va au combat", R. V. VIII, 45, 7), yapáyati "il fait aller".

Il est évident que le **p** joue ici un rôle de phonème de liaisonp ermettant l'addition d'un suffixe commençant par une voyelle à une racine elle-même de terminaison vocalique. C'est un procédé répandu dans la morphologie de bien des langues; la formation du parfait grec en -xa présente un cas analogue. Il est permis de penser que ce **p** est un ancien élargissement, qui aurait été originellement à sa place dans les verbes de mouvement pour le motif qui vient d'ètre indiqué.

On a peut-être une confirmation de cette hypothèse dans le fait suivant. En plus des racines terminées par une voyelle, le suffixe -payati apparait au causatif dans la racine ar- de iyarti, arpáyati "il met en mouvement". Or, le p de arpáyati peut passer pour un élargissement, car la racine en présente un autre. A côté de rp6ti gr. ¿produ on a en effet rghāyati "il s'élance, il s'agite" (intensif et noncausatif). Ce serais des causatifs de verbes de mouvement comme arpáyati, drāpéyati, yāpáyati, qu'aurait éte tiré le suffixe -payati commodment utilisé ensuite dans les racines a terminaison vocalique.

LE PRESENT DU VERBE "ETRE" EN TSIGANE By Jules Bloch

Le conjugaison normale du présent des verbes tsiganes est claire dans l'ensemble. En voici le paradigme (d'après Sampson, Dial. of the Gypsies of Wales. §385 sq.; Macalister, Language of the Nawar or Zutt, §87):

en Europe:	en Syrie:
kamav "i'aime";	nanam "j'apporte"
kames	nanék, nanay-
kamel	nanar
kamas	nanan
kamen	nanas
kamen	nanand

Au contraire, dans le verbe "être", non seulement les radicaux, mais les désinences diffèrent de l'Asie à l'Europe, et même dans les diverses parties de l'Europe (Miklosich, Ueber die Mundarten____,XI, p. 49; Sampson, §432; Macalister, §116); voici les types principaux:

Syrie:	Roumanie:	Hongrie:
aštōm (i)	som	som
aštūr (i)	san	sal
ašti, ašta	si	si
aštên	sam	sam
aštės	san	san
ašte	si	si:

Au roumain se rattachent le grec (avec i- initial isom etc.), le russe et le gallois; au hongrois, le transylvain, le finnois et l'allemand.

L'explication de ces formes, telle qu'elle a été proposée par Sampson, n'est pas exempte d'obscurité et d'arbitraire. En premier heu, il l'a bien vu, isom ne peut dériver directement de skr. asmi, la conservation de la sifflante s'y oppose (cf. ame "nous"). Faut-il donc poser un verbe du type asāmi? Mais alors on attend les désinences du verbe normal; or som ne rappelle aucunement kamav. De plus les diverses désinences du 2e singulier, en particulier de hongrois sal, all. hal, restent inexpliquées; in-

expliquée enfin l'opposition des voyelles au singulier et au pluriel, opposition nette en nuri, reconnaissable partiellement en européen.

Puisque les désinences des 2es personnes sont les plus compliquées — et Sampson renonce même à expliquer nuri attur— il convient de les examiner d'abord; peut-etre fourniront-elles un résultat susceptible d'extension aux autres désinences.

Comme Sampson l'a reconnu, la forme de l'actionne commune au singulier et au pluriel, roumain san, grec les de par son origine une 3e personne du pluriel: de même dans le verbe normal des dialectes européens, kamen 3e pl. a été étendu à la 2e pl. Il en résulte que la 3e pluriel actuelle si, grec isi est récente, et provient du singulier; il en sera question plus loin.

Le hongrois distingue 2 sg. sal de 2 pl. san; san étant, comme nous venons de voir, une 3e personne ancienne, il est facile de reconnaître dans sal l'ancienne 2e du pluriel passée au singulier, comme san a fait dans le groupe roumain: -l-représente ici la désinence sanskrite - tha, cf. sovel < sapatha; on sait d'autre part que le représentant nuri de - th - est - s -: on a donc le droit de comparer directement, du moins pour la désinence, 2 pl. astês.

Reste à expliquer nuri astûr, — en fait la seule forme qui soit réellement de deuxième personne du singulier, et dont l'isolement permet d'inférer l'ancienneté. Il ne peut être question ici de rappeler skr. asi, puisque dans ce cas le verbe "être' et le verbe normal devraient présenter la meme désinence: or nanêk, obscur du reste, et nanay - ne rappéllent aucunement attûr. Mais la 3e personne du verbe normal en - ar, issue de skr. ati, nous avertit que - r final de attûr peut représenter un -t-intervocalique. Des lors il apparaît que cette désinence doit renfermer une forme du pronom (a)tu "toi", qui n'a pas été reconnue (1), parce que les formes pronominales enclitiques

⁽¹⁾ Au moment où j'écrivais ceci, j' oubliais - et j'avais tort d'oublier - que M. Turner avait deviné 1' origine de la forme (BSOS, V.p. 47). Je me félicite de la rencontré.

annexées aux verbes font normalement fonction de régime, v. Macalister, § 61: or - m - et - r peuvent représenter aussi bien ama et atu que *me et * te.

Ceci emporte une conséquence importante qu'il faut souligner avant d'aller plus loin. Si nuri -r est un pronom enclitique sujet, le mot sur lequel il s'appuie doit être, comme M. Macalister l'avait entrevu, un participe. Dès lors un trait caractéristique du matt a explique immediatement: c'est l'opposition entre les voyelles désinentielles au singulier et au pluriel, qui représentent les désinences nominales, sing. -ō, pl. -e.

La troisième personne du pluriel, accommodée à la forme du verbe normal dans le dialecte noté par Pott (steindi comme awendi "ils viennent"), est chez Macalister la forme nominale sans verbe : ceci est conforme à la regle constante en indo-européen et en indo-aryen.

La contradiction entre 3 sg. -a et-ô- de astôm astûr doit s'expliquer par la position: -a est la désinence normale des noms élargis; kajja "non-tsigane' paraît s'opposer à européen gajo, comme hindi ghorā "cheval" à gujarati ghoro; mais lep luriel, qui. est semblable (nuri kajje, eur. gaje) tandis que h. ghore, guj. ghorā different, montre que l'opposition n'est pas de meme sorte Il doit s'agir d'une variation intérieure au nuri: -ō- est saus doute le traitement en position protégée; c'est ainsi qu'au prétérit on a nanda kajjan "il amena les gens", mais nandôs-san "il les amena", et bien entendu nandôm "j'ai amené" (Macalister. §92-93).

Une difficulté plus sérieuse reside dans la forme du thème: asta ne peut etre un participe normal. Le participe normal se termine en nuri par -r-, en Europe par -l-, issus de skr. -(1)ta-; ex. nuri kèra, eur. xalô (khādita-); n. gara, eur. gilo (gata); -t- se rencontre dans les groupes: n. sita, eur. sutô (supta); n. vēst- doublet de vēš, part. eur. bestô (upaviṣṭa-). Or as- n'a

pas de participe ancien (hrômi "j'ai été" semble contenir bhâta, cf. ôcao "je suis, serai"); d'autre part, si pkr. acch., tsig. eur. acc a bien laissé une trace dans l'optatif nuri hôcam (sur ce point voir J. Gypsy Lore Soc., XI. p. 32), il n'y vit pas de façon indépendante, et du reste ce verbe non plus n'a pas de participe ancien; on attendrait une forme secondaire, comparable à europ acilo. Avons-nous dans a-st-a une forme syncopée de sth(i)ta-, comparable (mais à l'inverse) à celle [(da) tta-] contenue dans tômi "j'ai donné"? Dans ce cas a-st-a serait à stir-ar "il se lève" (cf. skr. uttisthati on pkr. citthai?) comme a-tr-a "il fut, parut" où sthita-est conservé, à tir-"mettre", cf. encore ta taw "mettre, placer (sthāp-), tan "lit", eur. than "place, maison".

Du reste la difficulté est exactement la meme pour eur. sô; or il semble qu'on puisse poser so: aštâ=si: ašti. Les termes de la correspondance ne sont pas limpides, mais l'existence meme d'une corrélation est rassurante, et nous pouvons conclure que ašt- et éventuellement s-, quelle qu'en soit la formation, se comportent comme des themes de participe.

Il doit en effet y avoir un participe également à la base du verbe "être" européen. Une indication s'en trouve déjà dans le fait qu'il a conservé dans l'ancienne 2 pl. sal la désinence skr. tha disparue dans les verbes normaux; j'ai déjà indiqué (J. Gypsy Lore Soc., VII, p. 113) que la cause de cette disparition avait dù etre la rencontre de -l- issu de -th- avec -l- issu de -th- donc la double valeur de 3e sg. et de 2e pl. d'une forme commus kamel; si dans le verbe "être" la 3e sg. était une forme nominale pure, l'amphibologie n'existait pas et 2e pl. sal pouvait subsister.

En second lieu, si sal et san sont des formes primitivement plurielles, on retrouve dans l'opposition de 1 sg. som d'une part, et de l'autre pl. 1 sam, 2 sal, 3 san une opposition vocalique comparable à celle du nuri.

Il y a ici une nouvelle difficulté qu'il faut signaler, mais qui ne paraît pas insurmontable: 1 sg. so-m donne la forme attendre,

mais sa n'est pas le pluriel normal de cette forme: le pluriel en 4 des noms élargis en -o n'est pas inconnu de l'indo-aryen, et se trouve p. ex. en sindhi, mais il est exclusif du pluriel en -e (sauf archaisme comme le relatif je, pluriel de jo). En tsigane d'Europe, -a est la désinence plurielle des noms non élargis: phral "frere", pl. phrala. On aurait donc ici, à côté de so, le pluriel d'un singulier s.. Cette forme étonne au premièr abord; mais elle doit sans doute se ranger avec les participes dont j'ai montré ailleurs (Bull. Soc. Ling. XXXIII p. 61 sqq.) 1'abondance dans les parlers du Nord-Ouest de l'Inde, et qui ont été créés par utilisation d'un ancien as provenant de skr. asit De cette forme le taigane d'Europe a par ailleurs tiré une particule indéclinable servant à former le prétérit (ibid p. 59 sq); c'est sans doute la même qu'on retrouve dans le prétérit composé du nuri nandô-scité plus haut, où l'on ne voit pas pourquoi s- serait un pronom oblique.

Qu'en ts'gane d'Europe ce participe ait pris le sens présent, n'est pas pour étonner; cf. ksm. chu, torwali, maiya thu etc. (ibid. 62 sq)

Donc ni la forme ni le sens ne s'opposent à ce qu'on voie dans l'opposition so-: sa-l'opposition de formes nominales du singulier et du pluriel.

Cette interprétation permet d'abord d'écarter une objection possible à l'interprétation ci-dessus proposée de sal: cette forme n'est attestée que comme appartenant au singulier; ne pourrait-on y chercher le pronom tu, reconnu dans la 2e sg. du nurif Cette explication, admissible en ce qui concerne la consonne (cf. 3 sg.-el du skr.-ati,), ne rendrait pas compte de l'identité de la voyelle avec celle des formes plurielles.

A vrai dire si les formes sont claires, leur histoire se devine mal. Pourquoi la 2e sg. ancienne a-t-elle disparu au profit de la 2e pl. sal (ou san, elle-meme ancienne 3e pl.)? A-t-il existé à une époque comparativement récente une forme *so-l (so+tu) éliminée

au profit de sal presque homonyme? ou une forme so-s (so-asi) qui genait comme d'aspect prétérit? La syntaxe en tout cas n'y poussait pas: le tsigane d'Europe distingue encore bien tu "toi" de tume "vous", pluriel réel, comme l'asiatique distingue atu de atme.

Quoiqu'il en soit, il semble qu'à la deuxième personne le partic'ne s'accompagne d'une désinence verbale au pluriel, et, en Asie au moins, pronominale au singulier. Les premières personnes contiennent-elles des pronoms ou des désinences verbales?

Si l'hypothèse indiquée plus haut d'un *sos 2 sg. perdu était admise, on choisirait pour la 1e sg. so+pkr. ahmi; mais c'est un faible appui qu'une hypothèse pour choisir entre deux hypothèses.

Le pluriel européen nous laisse dans le meme embarras: sa-m peut contenir également bien pkr. mha ou amhe; peut-être l'absence de trace de voyelle finale serait-elle une indication contre le pronom. Le nuri n'est d'aucun secours, d'autant que la désinence

du verbe "être" est ici celle du verbe normal: ce qui permet en tout cas d'écarter l'idée qu'on aurait dans asten affaire à skr nah; du reste nah n'est pas un nominatif; et enfin le nuri pas plus que le tsigane dans l'ensemble n'ont gardé de trace de cette forme (M. Morgenstierne croit la reconnaître dans l'unique dialecte pashai de Nilam, Report, p. 91).

Il faut dire un mot de sen coexistant avec san en finnois, et unique en gallois. Faut-il y voir la continuation de santi (cf. eur. ivend < skr. hemanta)? Possible à la rigueur, un tel archaïsme étonne dans ces dialectes. Il paraît plus sûr d'y voir une adaptation de san au verbe normal, du type kamen.

* * * *

Tout n'est donc pas clair dans le verbe "être' du tsigane. Mais il semble que le nuri fournisse la clef des principales difficultés; en laissant apparaître un participe à la base du paradigme. La meme formation est, comme on a vu, fréquente dans l'Indoukouch, où le participe se rencontre même à l'état nu, et avec le sens présent, contrairement à l'usage de l'Inde propre. Ce qui est curieux, c'est le mélange des désinences pronominales et yerbales, sûr aux deuxièmes personnes en Asie, possible ailleurs,

Le schème est celui-ci: Asie Enrope Participe seal asti 1 3 ag. Participe seul (Participe+désinence du 3 pl. verbe normal) Participe+tn (perdue) 2 sg.

Participe+ -tha Participe + -tha 2 pl. Participe +ahmi Participe+ahmi piutot 1 sg. que me! on me Participe+mha plutôt que Participe+ 1 pl. ahme

désinence du

verbe normal

On peut se demander si ce système composite n'est pas issu d'un état comparable à celui du kasmiri qui a à la 1e sg. asmi affixé, et à la 2e pl. -tha: chiwa, f. chewa comme gupiw "vous cachez"; la 2e sing. aussi a été adaptée au verbe normal: chukh comme gupakh). Dans ce cas il est concevable que l'ambiguité de -m à la le personne du singulier ait pu servir de point de depart à l'affixation de formes pronominales à la 1e du pluriel et à la 2e du singulier.

SUR LES NOMS INDÓ-EUROPÉENS DU "LAIT" By A. Meillet

L'existence d'un nom ancien, établi par des concordances entre plusieurs langues distinctes, garantit le fait qu'une notion était connue des hommes qui parlaient l'"indo-européen" commun; en revanche l'absence d'un nom commun à plusieurs langues n'est, bien entendu, pas une raison suffisante de douter qu'une notion ait été nettement dégagée dans le monde indo-européen. Les nome du "lait" illustrent ce principe.

Dans une société où le bétail était la principale richesse, le lait était utilisé, donc nommé (v. l'article Milch du Reallexilkon de Schrader-Nehring). Mais les noms varient d'une langue à l'autre, et, en général, ils n'ont pas cette transparence qui caractérise les noms présentant des innovations dues à des interdictions de vocabulaire. Ils rappellent plutôt ces noms de parties du corps qui diffèrent d'une langue indo-européenne à l'autre meme quand ils présentent entre eux des ressemblances et qu'on n'arrive pas à ramener a une forme originelle commune. Il s'agit du vocabulaire technique et familier qui n'avait pas d'unité en indoeuropéen; seuls étaient communs à l'ensemble du monde indoeuropéen les termes qui désignaient les actes principaux de la vie, les p'incipales institutions sociales comme la parenté, les grands animaux domestiques. On ne connaît, pour l'indo-européen commun, qu'un seul nom d'oiseau, celui de l' "oie"; mais s'agit d'une volaille, c'est à dire d'une chose qui intéressait proprement les femmes; qu'on se reporte au songe de Pénélope dans l'Odyssee I. 535 et suiv. Et le nom se dénonce par sa vocalisation comme un terme populaire: les langues qui révolent le timbre de la voyeste s'accordent à présenter l'a, qui est, on le sait, l'une des caractéristiques du vocabulaire populaire en indo-européen: xaveé en grec, sansar en latin. Si le lait n'a pas de nom indo-européen commun, c'est une c'est un produit qui releve des techniques féminines et n'intéresse pas proprement les chefs.

La forme grecque du nom du lait, gale, galekter est, par elle-même, insolite au point de vue indo-européen. Le caractere

"populaire" du mot est indiqué par ceci qu'on trouve la consenne géminée intérieure, si rarement attestée en grec, au moins dans une forme d'un glossaire: glakkon. galathénon. Hes., dans un dérivé. Et l'on observe des flottements entre k et g; Homère a glágos et periglagéas (acc. plur.) tandis que le crétois a klagos; le vocalisme est aussi flottant: Homére a glaktophágos et on lit chez Hesychius glakkônes mestaì gálaktos (v. Boisacq, Diet etym. de la l. gr., p. 1102, et la biblio-graphie citée).

Le latin lac, lactis ne se laisse rapprocher d'une forme grecque glakt- qu'à la rigueur, à cause de l'absence de la gutturale initiale. Et le mot grec n'a au un correspondant ailleurs.

Le mot grec et le mot latin, qui ont entre eux une grande ressemblance, s'accordent du reste à présenter le vocalisme "populaire" a.

Dans une autre region dialectale de l'indo-européen, on observe une concordance limitee à deux langues: le mot du type archaique ved. dédhi, dadhnéh désigne le "lait aigre"; la langue religieuse en a tiré parti, et on trouve dadh(i) y âsirah somāsah les somas mélangés de lait (aigre'. Or, en vieux prussien, le vocabulaire d'Elbing a le neutre dadan comme nom du "lait", et rustan dadan "sauermilch" (lait aigre.) Les langues baltiques autres que le vieux prussien et les langues slaves ignorent le mot. On a l'impression qu'il y a ici un nom a redoublement; or, dans les noms indo-europeens, le redoublement est une des caractéristiques du type "populaire". Sur le timbre de la voyelle de la syllabe initiale, on ne peut rien dire, puisque l' a baltique comme l' a védique peut reposer sur o aussi bien que sur a; le vocalisme "populaire" a n'est pas exclu.

Un autre groupe de noms du "lait" se trouve à la fois en indo-iranien et en baltique, mais sous des sormes différentes dans les deux familles de langues. Le sanskrit a páyah, payasah, à quoi l' Avesta récent répond par payō; c'est le nom du "lait" en tant que liquide nourricier. Mais l'Avesta a aussi une autre

formation, parma, et c'est au dérivé parmavaiti que répond pour le sens véd. páyasvail. Une chienne qui allaite est dite dans, l'Avesta parmaini. Le letto-lituauien a un mot parent, mais qui ne concorde ni avec l'un ni avec l'autre des deux mots cités: lit. pirnas lette pirns. Le lituanien laisse, comme l'indo-iranien, apercevoir que tous ces mots appartiennent à une raçine verbale: en lituanien papijusi kárve se dit d'une vac e qui ne retient pas son lait, et py'dyti "faire donner du lait" (v. A. Walde-Pokorny, Vergl. Wört d. indog Sprachen, II, p. 73 et suiv.). M. H. Pedersen, dans Grammatical Miscellany Jespersen. p. 65, a écarté avec raison le rapprochement qui a été proposé avec v. angl. fæmne "jeune femme".

Le sanskrit a un autre mot, ksīrám "lait" (khīr dans l' Inde actuelle), qui n'a de correspondants connus qu'en iranien: persan šīr etc.

Le mot skr. mástu, qui distingue la creme montée sur le lait aigre, a des correspondants en iranien, notamment persan māst "lait aigre", à côté du verbe māsīdan "cailler". On rapproche souvent arm. macanim "je me colle" et "je me coagule"; mais c'est v. sl. mazati "enduire" et gr. mágis 'pâte petrie' que la phonétique et aussi le sens de 'se coller' autorisent à rapprocher du mot arménien. Le mot indo-iranien est donc isolé.

Tous les substantifs cités jusqu'ici sont neutres, parce que le lait était en général envisagé comme un produit. Mais on pouvait aussi considérer le fait comme actif, et en effet l'Avesta oppose xèvis (nominatif), designant le "lait" liquide, à āzuitis qui désigne ce qui est solide; les gatha ont l'accusatif xèvidem

On s'explique ainsi la différence entre le nom germanique du "lait', got. miluks, etc., qui est féminin, et le nom v. sl. mlěko (russe molokó etc.), qui est neutre. Les deux mots ne concordent pas dans le détail; car le mot germanique repose sur un radical meleg, et le mot slave sur un radical melek. La différence rappelle celle entre glag- et glak-—en grec. Mais on peut aussi se demander si le mot germanique n'a pas subi

l'influence de la racine signifiant "traire", v. angl. melcan, etc. La forme du mot slave exclut l'hypothèse d'un emprunt au germanique; et elle exclut également tout rapport d'origine avec la racine signifiant "traire" qui, en slave, est de la forme mels-; du reste, même en germanique, v. angl meoluc 'lait', n'est pas conciliable avec melcan 'traire'. Mais une 'étymologie populaire' est toujours possible, surtout dans un mot tel que le nom du 'lait'.

Il n'est pas surprenant que la racine signifiant 'traire'. ait agi sur le nom du "lait". Car le celtique en a tiré le nom même du 'lait,' (rl. mlicht (blicht), gall. blith. Les noms tokhariens, A malke, B malkwer paraissent aussi appartenir à la racine melg-.

Dans l'Atharvaveda, x, 10, 30-31, la traite de la vache', dugdham vasāyāḥ, s'oppose au nom propre du 'lait' rayaḥ; et, par la suite, dugdham 'ce qui a été trait' est devenu un nom courant du 'lait', si bien que dūdh est demeuré dans l'Inde actuelle au sens de 'lait frais'.

Le genre neutre de la plupart des noms qu'on vient de voir n'est pas inhérent à ces substantifs eux-memes, mais provient de la manière dont les choses étaient conçues. Car les mêmes substantifs, s'ils designent des laitances (de poissons), sont du genre animé (féminin): lactés en latin, moléki en russe.

Les mots déjà indiqués n'épuisent pas, tant s'en faut, la terminologie du 'lait'. On s'est abstenu de citer idi les mots isolés comme arm. kat'n (gen. kat'in) ou alb. dhate (nom du lait aigre);

Si les noms du 'lait' sont variés, et parfois dans une même langue: le sanskrit ayant à la fois, dès le début, payah, dâdh et karam, l' Avesta ayant à la fois payō, paēma, xèvis (et de plus, une fois, on lit xèiptavaiti à côté de pamavati, et ce xèipta n'est pas isolé en iranien, voir le Wörterbuch de Bartholomae) c'est que le lait est envisagé d'une manière toute matérielle, comme une chose qu'on considére de manières diverses suivant l'état où il se présente et suivant les usages qu'on en fait.

On apercoit ici quelque chose du vocabulaire technique indoeuropéen, et d'une technique féminine, chose exceptionnelle. Le vocabulaire indo-européen ne se bornait naturellement pas aux mots de la langue des chefs que présente en évidence la comparaison des langues indo-européennes et sur laquelle est fondée la grammaire comparée des langues indo-européennes.

A NOTE ON THE HATHIGUMPHA INSCRIPTION OF KHARAVELA

By L. D. Barnett

In his very able and for the most part convincing paper on "Puşyamitra and the Sunga Empire" in the Indian Historical Quarterly, vol. V. pts. 34, Rai Bahadur Ramaprasad Chanda adds to our many obligations to him by giving the true reading of the crucial passage in the Hathigumpha inscription which is commonly but wrongly supposed to contain a date. The actual letters of 1.16, according to the irrefutable evidence of the cast in the Indian Museum, are as follows: panatariya.....[mfufrf] iyakāle voch in ecacoya thiagas atik amtariyaamupādayati.

With his ingenious interpretation of these letters I regret that I cannot agree, as it would require the change of vochine to vochinam and ignores the patent parallelism of the words panatariya and satikamtariyam, and I therefore venture to put forward with considerable diffidence a new version of the passage.

The Prakrit words of the passage may be naturally converted into Sanskrit and translated thus:—pañcāntarīya......
Mauryakāle (?) yyavacchinne ca catuḥṣaṣtyagram saptikāntarīyam [scil. kālam] utpādayati, "and when the Mauryan (?) time-reckoning..... which consisted of lustres (antara) of five [years] each, had broken down, he founds [a new time-reckoning] consisting of lustres of seven years each and mounting up to the sixty-fourth year". With such a use of antara in the sense of successive periods of time compare e. g. Manvantara.

^{*}The Rai Bahadur with extreme kindness has sent me a photograph of the passage as it is preserved on the cast, which shows no trace of the chisel-mark where Bhagvanlal Indraji read mu, and only an uncertain trace of an r.

It is well known that in early time a lustre or yuga of five solar years of 366 days each, amounting in all to 1830 days, was in use, and that subsequently 12 yugas of five years each were combined to make up the cycle of Brhaspati (Jupiter) or Barhaspatya samvatsara-cakra, which comprises 60 years and thus forms a period combining the five-year solar yugas with the twelve-yearly cycles in which Jupiter completes his sidereal revolution. It is this system of five-year yugas, I believe, to which Khāravela here refers when he speaks of "the Maurvan(?) time-reckoning consisting of lustres of five [years] each". The system apparently had broken down and ceased to work in Kalinga, in other words, astronomical calculations were unable to harmonise the solar with the lunar year; and to reform the calendar, it would seem, Khāravela introduced a new cycle of 64 vears consisting of 9. yugas of 7 years each (viz. 1-7, 8-14, 15-21, 22-28, 29-35, 36-42, 43-49, 50-56, 57-63) with a concluding 64th year. On what astronomical principles this attempt at calendarial reform was based we cannot tell. Apparently it aimed at harmonising somehow the cycle of Brhaspati with the solar year. It is worth nothing that, as according to the Süryasiddhanta a year of the cycle of Brhaspati is about 4.232 days less than a solar year, this deficiency in seven years would amount to 29.624 days, nearly agreeing with the length of the synodic month of 291; days, and this deficiency could then be made good by intercalation of an adhika month.

For the odd 64th year the following explanation may be suggested. If, as is quite possible, the cycle started from a day other than the first of the calendarial year, say the day of Khāravela's coronation, a year reckoned from this starting-point would run over into the next calendar year; hence after the completion of the 63rd year of the cycle there would remain a certain space of time, less than a calendar year, between the end of the 63rd year of the cycle and the termination of the calendar year in which that end fell. For instance, suppose the calendar

began the year with Caitra, and that the cycle of Khāravela started on the first day of Karttika; then the 63rd year would end on the last day of Asvina, after which there would be a period of 5 months (Karttika to Phalguna) which would be reckoned as the 64th year, after which the following 7 months (from the first of Caitra to the end of Asvina) would be counted as constituting the first year of a new cycle. Thus the last year and the following first year would in reality comprise only one true year, and the cycle would consist altogether of not more than 63 real years. Such a practice is not unknown; a parallel may be quoted from the Anka or "Onko" system of Orissa (which, it should be observed, was the home of Khāravela), according to which "when a prince dies in the middle of an Onko year, his successor's 1st Onko which commences on his accession to the throne, does not run its full term of a year, but ends on the 11th day of Bhâdrapada-suddha following: consequently the last regnal year of the one and the first of the other together occupy only one year, and one year is dropped in effect" (Sewell and Dikshit, The Indian Calendar, p. 38).

As the first letter of the word muriya in the inscription is quite uncertain, one is tempted to suggest that after all the reading muriya may be erroneous, and should be corrected to suriya: the system of five-year lustres is a solar one. The Rai Bahadur further tells us that before muriya are traces of four or five letters which are now "totally defaced". These were read by Bhagvanlal Indraji as sathivasasate raja-, and by Mr. Jayaswal as satasahasehi. Very little reliance can be placed upon either of these decipherments: but as the inscription was probably in better condition when first found by Bhagvanlal, his reading of the first four letters, sathivasa, may possibly be right, and if so, it will support my interpretation. For it means that the cycle superseded or amended by Khāravela was the cycle of 60 years, i. e. of 12 lustres of 5 years each, and may we

conjecturally restore the text to panatariya-sathivasage, in Sanskrit pañcantariya-sasti-varsagre

A slight difficulty in the way of accepting the above suggestions arises from the fact that panca in the sense of pancakam or pancikā, a group of five, is somewhat unusual; but pancāntaram in the meaning of 'an interval of five [years]' may be justified by compounds like pancahotā (RV. V. xl. 1). It may also be remarked that saptikā in place of the common saptakam is without authority; but it is fully justified by the analogy of pancikā.

SOME SANSKRIT AND PALI NOTES

By Jarl Charpentier

1. Skt. avadhvamsa.

In AV. V, 22. 3 we read the following words: yah paruṣaḥ pāruṣeyo 'vadhvamṣa ivāruṇaḥ, takmānaṃ visvadhāviryā-dhārāncam para suvā, where apparently takman, the demon of fever', is spoken of as being "red as avadhvaṃsa." To this word is ascribed in the dictionaries the sense of "sprinkling, powdering' (Hc. an. IV, 324; Med. p. H 47); and Bæhthlingk - Roth, quoting the AV.-passage, translate the word with "dust" or "flour".

Professor Lüders some years ago' dealt with this verse in the Atharva-Veda and translated the words in question "rot wie Streupulver", at the same time suggesting that avadhvamsa should really mean the same as as manahs.la, red arsenic, which like the yellow one (haritala) seems to have been frequently used, already at an early time, for paint and powder, for making tilakas etc. Although such a suggestion is altogether justified it seems that we can perhaps, with the aid of a fairly late source, fix beyond doubt the real sense of avadhvamsa. For, we find in Hemacandra's Desinamanala, 1,168 the following words: candanam candanagharsanasila ceti dvyarthah. The word ohamsa- consequently means "sandal" and "a stone for rubbing sandal into powder". In the sense of "sandal" it is undoubtedly a tadbhaya from avadhvamsa- and thus proves that this word in the AV.passage must mean "red sandal". Again in the sense of "rubbing

⁽¹⁾ He is said to make men and all beings "green" or "yellowish green" (harita, AV. V, 22, 2; VI, 20, 3; cf. I, 25, 2, 3). In VI, 20, 3 he is called aruna "red" and babhru "tawny" etc.

⁽²⁾ Cf. Aupsätze. . . Ernst Kuhn gevidmet (1916), p. 321 sq.

silā in the Desināmamālā 1,169 and must be derived from Skt. *avagharṣa.'

Takman, the fever demon, is red in colour like red sandal. For, red is the colour of blood, of death, of fear; it is frequently the colour of evil spirits but also the one with which you scare them off, with which you turn off the evil eye and other malign influences.²

2. P. asimālā.

The Culladhammapālajātaka (358) is one of the most insipid and unattractive of all the texts belonging to the great collection of Jātakas and bears a certain similarity to the often rather unsavoury tales of the various arts of self-sacrifice practised by the Bodhisattva. It tells us how King Mahāpratāpa of Benares got angry with his seven months old son (the Bodhisattva) because his mother paid too much heed to him, and decided to have him killed. He thus called for the chief executioner (coraghātaka) and ordered him to fetch the child and successively to slash off its hands, feet and head. At last even the mangling of the lifeless

⁽¹⁾ The Petersburg Dict. only gives avagharsana in the sense of "rubbing off"; but there is no doubt that "avagharsamust mean the same thing.

⁽²⁾ On red as a magic colour cf. above all the articles of Professor Zachariæ in VOJ. XVII, 135 sq. 211 sq. and Kleine Schriften p. 233 sq.; also my article on pūjā in the Festgabe, H. Jacobi p. 276 sq. (reprinted in the IA, LVI; on pūjā Cf. also M. Przyluski, Revue de 1'Hist. des Religions XCV, 347 sq.).

⁽³⁾ Here as in Jātaka 313 and elsewhere he carries yellow robes (kāsāyavattha) and garlands of red flowers; his chief instrument is an axe (pharasu). In Jātaka 313 he carries a thorny whip (kantakakasā) while in our text he is provided with an upadhānaghat kā (a word, it seems, of uncertain sense but which must mean the same as dhammaganthikā in Jātaka I, 150, 24. 27, viz. "an executioner's block"). On yellow colour in magic etc. cf. Festgable, H. Jacobi p. 296 n. 4 where these passages have, unfortunately, been left out.

⁽⁴⁾ It seems obvious that the verses of this Jātaka are in disorder and do not tally with the prose version. The order should probably be 4-5, 1, 6, 2-3.

corpse is ordered by the unnatural father: "asitundena nampaticchitvă asimālam nāma karohiti". So tassa kalevaram ākāse khipitvā asitundena paticchitvā asimālam nāma katvā mahātale vippakiri (Jātaka III, 180, 23-sq.).

The general trend of the narrative is quite clear: the executioner throws the corpse into the air, catches it on the point of his sword and then in some way, cuts the corpse to pieces and flings them all over the palace-roof. In the following the poor mother is made to collect the scraps of flesh and put them in her lap. However, the word asimālā does not seem to be sufficiently clear; nor does the second passage where it occurs, viz. Dāthāvamsa III, 45², make it clearer as this verse simply sums up the main contents of our Jātaka:

yo Dhammapālo apī sattamāsajāto padutthe janake sakamhī kārāpayante asimālakammam cittam no dūsesi Patāparāje.

However it seems sufficiently obvious that asimālā "sword-garland" must mean some peculiar trick by which a corpse impaled on a sword is at the same time quartered and the pieces made to spread into different directions.³

⁽¹⁾ Viz., the coraghātaka.(2) JPTS. 1884, p. 128.

⁽³⁾ The PTS. Pali Dict. I, 88 gave an absolutely senseless interpretation of the word but this has been corrected in Corrigenda to pt. I (inserted between n and p, the curious pagination not admitting any better way of quoting the passage) and s. v. māla. Inspite of Kern, Toevoegselen, I, 16t there scarcely exists any word māla-, māla- "mud". In Jātaka, VI, 400, 13 "pitch" would be a much more sensible translation; and ibid. II, 416, 12 sq. mālākacavara- probably means "a heap of withered garlands "(under which the corpse of Sundarī was concealed just as in the Mrcchakatīkā the rogue conceals Vasantasenā under a heap of fallen leaves; the meaning of p. kacavara-be comes still clearer by a Prākrit word which must in some way belong here, viz, kayāro kajjavo tathā katavaro trnādyutkarah, Desīnāmamālā, 2, 11). and in Mil. p. 117. there cannot be the slightest doubt that phenamālā means "wreathes of foam"—a not uncommon mode of expression.

1

The word asimālā "sword-garland" seems to me to have an. illustrative parallel in certain expressions that have formed round that most horrid mode of punishment, viz the impaling on a stake. First of all we find the expression uttaseti (generally identified with Skt. uttamsayati) for which some examples from the Jatakabook may be sufficient. In Jataka, I, 326, 2 we read the following order of a king: "āghātane sīsam assa chinditvā sarīram sūle uttāsethā 'ti'': in II, 443, 6 we meet with the expression: tam papa purisam i vasule uttāsesum (where in V. 2 the sula is spoken of as asi and sakti); in III, 34, 6-7 we are told that tasmim pana kāle core gahetvā nimbasūle uttūsenti (in the same text III, 34, 25-26; coram gahetvā rājāno game kibbisakārakam appenti nimbasulasmim)2; in IV, 29, 2-3 the king orders his men concerning the ascetic Mandavya: "gacchatha, nam sule uttasetha 'ti', and ibid. 11. 13-14 the ascetic speaks thus to his executioners: "sace mam sule uttāsetukām' attha kovilārasūlam āharathā 'ti''. On the same page 1.18 there occurs the participle of this same verb in the expression sule uttasito "he is impaled on a stake"; and the identical expression is found in I, 499, 14 while in I, 500, 11-13 we again meet with the words sule uttasetha and sule uttasesum. Finally we also find a substantive uttāsana- "impalement" in II, 444, 1.

Now there is no doubt that p. uttāseti is Skt. uttamsayati, a derivative of uttamsa- "wreath", and means "to adorn with a

(1) Cf. the curious expression in Divyāvadāna, p. 417. 8: jiyantisūlām atha kārayāmi. There are different modes of impaling a dead corpse or a person who is still akve.

⁽²⁾ The Nim tree (L. Melia Azadirachta) which is sacred to various gods seems to have sometimes enjoyed a sinister reputation though it is also useful in several ways, cf. e.g. Witts, Commercial Products, p. 780; Sir George Grierson, Bihar Peasant Life p. 391; Enthoven, Bombay Folklore pp. 137. 139 sq. 224. 246, 262, 264, 342 etc.

⁽³⁾ This verb is found in the Mukundanandabhana 12, 4; 23, 6; cf. also samuttamsita- in Dharmasarmabhyudaya, 4, 39.

The substantive uttasaitts in Ayar. sutsa p. 7, 1 (Schubring) must, I suppose be taken to be "uttrasayitar—and not "uttamsayitar (Pischel, Pkt. Gr, §582 less correctly takes it to be=uttrasayitva)

wreath, a garland". The grim humour has thus described the poor wretch impaled on the stake as a sort of wreath adorning this horrible instrument of torture. No doubt the same sort of grim and expressive humour underlies the word asimālā which, unfortunately, I have only been able to find in the passage quoted above.

In Sanskrit we seem to have at least one passage where the verb ava-tams- is used in the same sense in which we have here found ut-tams- being made use of. Professor R. Schmidt in his supplements to the Petersburg Dictionary quotes from the Dasakumāracarita p. 41, 16 the expression sūlāvatamsita- which must mean exactly the same as sūla uttāsita in Pali, i.e. "placed like a wreath on the stake". Though there would always be a possibility that uttāseti could, by the way of "ottāseti, he derived from ava tamsayati this does not seem at all necessary. We may rest content that both sūle avatamsayati and uttamsayati meant the same thing and that they may both throw some light on the word asimālā dealt with here."

3. Skt. Kalevara-.

To Skt. Kalevara- correspond in Pāli kalebara-, kalebara-, kalevara- and in the "Sanskrit" of the Northern Buddhists kadevara-'; once we find even a form kadepara-'. According to

(2) Though I have looked through all the editions of the Dasakumāracarita available to me I have, unfortunately, not

been able to identify the passage.

(4) E. g. Divyāvadāna p. 39, 11; Avad. sat. II, 26, 1 (the

same phrase in both passages).

(5) Leumann. Zur nordar. Sprache u. Literatur p. 41 n.

⁽¹⁾ There is another expression which is somewhat parallel in sense to uttāseti, viz., sūle āvunīti "to impale" (properly "to string, tie, fix to a stake") e.g. Jātaka, III, 35; āvunāpeti, III, 218; āvuta- "impaled", V, 145; VI, 105 of fishes stuck on a spit, etc.; cf. Morris, JPTS, 1884, p. 91.

⁽³⁾ A parallel expression is found in the term jotimalaka"the garland of fire", denoting some other horrible form of torture,
Mil. P. p 197 etc. The way of procedure is not quite clear (cf.
Spence Hardy, Eastern Monachism p. 32; Kern, Toevoegselen I,
46); I suppose it means wrapping the body in oiled wreaths of
cotton and putting fire to them.

the researches of Professor Lüders Festschrift Wackernagel p. 294 sq. the -d- or -1- shou'd everywhere, when found besides a dental -1-, be the primary sound; and although his conclusions are at times rather uncritical, I should feel inclined to think that this is most'y—though not always—the case. However, it is not my purpose here to try to find for kalevara- any etymological connection which would probably be a quite hopeless task; I only want to add a few remarks concerning the real meaning of the word:

Kalevara- is generally said to mean "the body" and "a dead body, a carcass" which undoubtedly seems to be the case. If that be so, it is, however, extremely difficult to find out what underlies the Pāli expression sopāna-kalevara- which in Majjh. Nik. II, 92 apparently means "(the step in) a flight of stairs" and which is certainly to be preserved in CV. V, 21, 2(=Vin. P t. II, 128) as being the lectio difficilior instead of "kalingara adopted by Oldenberg. This again goes far to explain an otherwise puzzling expression in the Jain Uttarādhyayanasūtra 0, 35 where we read:

kakalevarasen'ın uttiya siddhim Goyama loyam gacohasi |

hemam ca sivam anuttaram samayam Goyama mā pamāyae||

The word akalevaraseni is explained by Devendra in his tīkā in the following way: akalevarasrenih | avidyamānam kadevaram eṣām akadevarāh siddhās teṣām srenir akadevarasrenih etc, which only shows that even a good commentary

⁽¹⁾ This is exemplified by such passages as that dealing with the name of the pomegranate (Skt. dād.ma-etc.,) on p. 305; as Dr. Laufer. Sino-Iranica p 282 sq. had previously shown the word is traceable to some Iranian name of this tree which is decidedly not a native of India. Nor does the paragraph dealing with kāla- and kāla: (p. 300 sq.) inspire entire confidence etc.

(2) And also by Kern, Toevocgselen, I, 141.

⁽³⁾ Cf. my edition of the Uttaradhyayana-sūtra p. 319).

like that of Devendra is apt to produce, in dubious cases, almost unlimited nonsense. For, compared with the Pāli word it is at once obvious that akalevara-śreni can mean nothing but "a ladder without steps or rungs".

As it would be rather out of the way to assume the existence of two different words kalevara- (kadevara- etc.) one is entitled to ask for some sort of connection between the meanings, "body, carcass" and "step of a flight of stairs, rung of a ladder". Such a connection, I venture to believe, is established by the Prakrit word kalero kankālah karālasca (Desināmamālā 2, 53, cf. Trivikrama I, 3, 105) which Pischel has correctly derived from kalevara. This seems to make the whole thing tolerably clear: kalevara- (kadevara-) originally means "the ribs, the thorax", and it thus naturally enough developed the sense of "carcass" and "body". As, on the other hand, the steps in a flight of stairs or the rungs of a ladder were not ineptly compared with the ribs of the thorax this gave rise to the expressions sopāna-kalevara- and akalevara-śreni- dealt with above. Thus sopāna-kalevara- originally means something like "the ribs of staircase".

4. P. itthi.

In the Mahānāradakassapajātaka (544), V. 22° we read in the description of an excursion of the King of Videha:

Tam anuyāyum bahavo iţţhikhaggadharā balī assapiţţhigatā dhirā narā naravarādhipam.

The commentary does not explain the word itthio, and it does not seem to have been understood. For, Kern, Toevoegsclen I, 139 suggests that the true reading should be iddhakhaggadharā "carrying flaming swords "which is accepted without further commentaries by the PTS Pali Dict. I, 119.

⁽¹⁾ Bezz. Beitr. VI, 95; Pkt. Gr. \$149.

⁽²⁾ I do not here touch upon kalera = karāla as I shall hope to deal with that later on.

⁽³⁾ Jātaka ed. Fausbæll VI, 223, 18.

⁽⁴⁾ For which the Ms. $B^d = \text{reads inda}^\circ$.

Susruta and may well be a later formation than the Pali word. This, however, is of no consequence; for, opona- is pavanameaning "an instrument for cleansing, rinsing (the teeth)".3

The -n- in *pona- is out of order from the ordinary point of view and simply belongs to those not uncommon cases where Pali shares with the later Prakrits the cerebralisation of an intervocalic-n-. A word of exactly the same formaton is moni- "a basket for keeping snakes", Hc. au. II, 151; it must be derived from Skt. *mayana-2 which belongs to may- "to bind" (Pan. VI. 4. 20). Another word which seems to be identical in its structure with these both is p. Pkt. lona- "sait" (for which the modern vernaculars, as is well known, have forms beginning with 1- or n-). There, however, already the Sanskrit shows a cerebral in the form lavana. The etymology of this word remains unknown; there is nothing to correspond to it even in the Iranian languages. Nor can the exact meaning be said to be absolutely clear; at any rate the meaning of the derivation lavanya- might easily suggest that the original sense was both that of "salt" and "sweet"—a case which is by no means without parallels. However, this is probably not the case: lavana-

(1) For the sake of the meaning cf. pavani "a broom". Whether ponia sūtrabhrt tarkuh (Desīnāmamālā, 6, 61) could be connected with these words I dare not decide. If so it would correspond to Sanskrit *pavanikā.

(2) In Indog. Forsch, XXIX, 399 n. 3. I less correctly

derived it from "mauna-.

(3) Cf. eg. Bloch, La formation de la langue Marathe, p.400.

(4) The suggestions of professor Reichelt, Streitberg Festgabe, p. 295 sq. are wholly unconvincing.

(5) The Indo-Iranian languages have no common name of the salt; nor do they share in the common European name of this mineral, which was something like *sal-d, *sal-n-es (cf. J. Schmidt, Pluralbildungen, p. 182 sq.). This still forms a weighty argument in favour of the theory that the unbroken Indo-European community did not know the use of salt (cf. Schrader, Reallexikon, 2nd ed., II, 273, and the present writer in BSOS., IV, 156). The European tribes probably learnt to use it, after the separation from the Aryans, on the northern shores of the Black Sea.

originally meant "salt" and especially "sea salt". The word is first met with in Av. VII, 76, 1; and there is, of course, no reason for thinking it impossible that the -n- could already at that time be due to "Prakritic" influences. However in, consideration of the curious interchange between srona -: slona - and sravana -: slavana- "lame, crippled" already in early texts' I should feel inclined to suggest that lavana- has really developed from an older form "ravana- of which there is now no trace."

We find a cerebral n in about the same position in the curious Pāli verb onojeti" to cause to wash off, to cleanse; to give as a present, to dedicate (with the rite of washing one's hands)", onojana- "washing one's hands". According to Kern⁵ this represents Skt. ava-nejayati, ava-nejana-; and although the suggested transposition of -e- into an -o- is extraordinary and unexplained there can be little doubt that this is really the correct explanation. In that case the cerebral -n- is rather out of order. We also find a verb onati "to drag away", Dhp. 13, 12 which, according to an old but still valid explanation is really = Skt. ava(apa)-navati. Even here we find the cerebral -n- in a similar position; the same is the case in onamati, onamana-, onata- (inter-changing with o-nam- cf. Morris JPTS. 1887, 125).

- (1) Compared with saindhava- "salt from the Salt Range" etc.
- (2) No possible influence in the case of the cerebralisation can be ascribed to the neighbourhood of the 1- sound; the form anulepana- mentioned by Wackernagel, Ai. Gramm. I, 194 is purely Prakritic.

(3), Cf. Wackernagel, Ai. Gramm. I. 193.

(4) If this be so *ravana-, lavana- is certainly a word which the Aryans picked up from some aboriginal stem in India. Certain Indo-European connections would perhaps suggest themselves, but they would certainly be far too hazy to be of any value whatsoever.

(5) Cf. Buddhism, p. 92; Toevoegselen II, 5. 138; also Morris, JPTS. 1887, 150; Müller, Pali Grammar p 9. (6) Cf. Pott, Etym. Forsch. I, 169; Wackernagel, Ai. Gramm.

L, 194.

It is rather apparent that in all these cases the cerebral -ncomes immediately after an -o-vowel. The Sanskrit and Prakrit grammar knows of no possible influence of such a vowel in the direction of a cerebralisation of a following n, and it may be well doubted whether such an influence could really be traced. However, a cerebralised n in such a position would be of very high age if the Rigvedic word oni- could also be brought under this The real meaning of this Vedic word seems to be far from clear: according to the Nighantu 3, 30 the dual onyau means "heaven and earth", and Sayana, commenting on RV, X, 96, 12, interprets it as "finger", cf. the proper name dasoni-. Modern interpreters have tried, with no great success, still other possibilities. But whatever may be the original meaning of oni- I am firmly convinced that it is only a very early "Prakrit" form of Of this word there are three traditional meanings; according to Nighantu 1, 1 it is-prthivi, "earth", according to 1, 13-nadi, "stream, river", and according to 2, 5-anguli, "finger". No doubt the first and last one are those ascribed by the native tradition to oni-; and it seems fairly obvious that even the old Indians interpreters may have had a vague idea of the identity of these two words.

⁽¹⁾ Still other such instances present themselves within the Sanskrit dictionary as e.g kona- and kaphoni- (on which cf. Morgenstierne, Report on a Linguistic Mission to Afghanistan p 88; Chatterji, Bengali Language I, 315). But for these words no plausible derivations suggest themselves—at least not to me—and I highly doubt whether they can be considered as real Sanskrit words. For kaphoni- (there also seems to be kaphani- which is, however, doubtful) and the related Benga'i and Iranian words a common original form can scarce'y be found.

⁽²⁾ A certain d'fficulty also seems to beset the Pali word in in in-rakkha-, cf. Morris, JPTS. 1887, 150; Kern, Toevoegselen II, 5.

⁽³⁾ Cf. e.g. Baunack, Zeitschr f. vgl-Sprf. XXXV, 520 sq.; Wackernagel. Ai. Gramm, I 191; O'denberg, RV. Noten I, 61. II, 311; Neisser, Z. Wb. des RV. I, 197 f.

⁽⁴⁾ The TS.-variant uni- seems to be of no importance.

6. P. rajassira-.

The Pāli word rajassira- is known to me only from the following six passages, five of which apply it as an epithet to ascetics or brahmins: Suttanipāta v. 980:

ugghattapādo tasito pańkadanto rajassiro | "foot-sore, thirsty, with dirty teeth, covered with dust" (in the description of a wandering Brahmin); there is no commentary on the word here.

Jātaka IV, 184, 10 sq:
dīghuttaroţţhā jaţilā paṅkadantā rajassirā |
iṇaṃ vodāya¹ gacchanti tadā Kaṇho pamokkhati||

"When ascetics with long moustaches, with braided hair, with dirty teeth, and covered with dust will live by usury then will (the dog) Kṛṣṇa be let loose". No commentary on rajassira.

Jataka IV, 362. 25 sq. parülhakacchanakhalomā pańkadantā rajassirā | okinņā rajareņūhi yācakā vicaranti te||

"with long hair in the armpits and long nails, with dirty teeth and covered with dust, sprinkled with dirt and dust these (false Brahmins) run round like beggars." No commentary on rajassira.

Jātaka IV, 371, 19 sq.

isiñ ca dāni pucchāmi kisam dhamanisanthatam | parūļhakacchanakhalomam paṅkadantam rajassiram||

"Now I ask the lean ascetic with veins showing, the one with long hair in the armpits and long nails, with dirty teeth and covered with dust". No commentary on rajustira.

Jātaka IV, 476, 23:

cirassam vata passāma brāhmaņam devavaņņinam | mahājatam bhāradharam pamkadaūtam rajassiram||

⁽¹⁾ There is a v. l. codāya which wou'd g've a better sense (or rather would alone make the passage intelligible); but I do not see my way for explaining a form like *codāya.

⁽²⁾ Such ought to be the interpretation according to the commentary.

"At last we get sight of the Brahmin of godly hue, with long braid, carrying his load, with dirty teeth, covered with dust". No commentary on rajassira.

Finally we find it in another connection in Jātaka IV, 398, 14:

upaniyati jivitam appamāyu
jārūpanitassa na santi tāṇā |
karohi pancāla mam'eta vākyam
mā kāsi kammāni rajassirāni||

"Life, of short duration, draws towards its end, there is no safeguarding for one who has reached old age. O King of Pañcāla, act now (etc.) according to my word, fulfil no sinful actions". Commentary: rajassiraniti kilesarajena okinnasīsāni.

This commentatorial passage thus seems to derive rajassira- from rajas- "dust" and sira(s)- "head"; and such an opinion seems to have won the applause of modern scholars, cf. Kern, Toevoegselen II, p. 46 and PTS Pāli Dict. s. v.

There is in Sanskrit literature at least one passage known to me which might make us feel uncertain concerning such an explanation. In the Suparnadhyaya 8, 5 we read the following verse:

rajasvalo jatilah pankadanta unnitasikho vadati satyam
eva |
amitramadhye na bibheti mrtyoh sa brāhmanas tam sma

mā han garutman

⁽¹⁾ This eta the commentary explains as—etam. As far as I understand it is rather = etta "here" which is again = etra in Shāhbāzgarhi VI, 15 and is derived from "itra = av. ivra, cf. Lassen, Institutiones, p. 129; Brugmann, Zeitschr. f. vgl. sprf. XXVII, 193 sq; Johansson, Shāhbāzgarhi I, 19 sq. Here also belongs ettha "here, now" (with the same aspiration as in tattha etc.). On other explanations of this word cf. Kaccāyana II, 4, 23; Hemacandra, I. 57; III, 83; Fausbæll, Dhammapada p. 350; Childers s. v.; Kuhn, Beitrage p. 21; S. Goldschmidt, Prâkritica pp. 6. 21 ff.; ZDMG. XXXVII, 457 sq.; Pischel, Ved. Stud. I, p. XXXI n. 2; II, p. 88; Pkt. Gr. p. 89 sq.

"Covered with dust, with braided hair, with dirty teeth, with raised top-knot he speaks the truth only; even in the middle of his foemen he fears not death—he is a Brahmin, kill him not, O Garutmant".

The word rajasvala-, which we meet with here, is found in other passages too in the sense of "covered with dust"; thus in the passages MBh VII, 1454 and 8896 (of warriors vanquished in battle) and IX, 1370 (of elephants fleeing before the onslaught of Bhima). It is further found in the sense of "filled with rajas, with passion, sinful", a sense which tailies completely with that of rajassira- in Jātaka IV, 398, 14(kammāni rajassirāni). As is well-known rajasvala- (in its feminine form) also means "a woman having her menses" with which sense we are not concerned here. The formation of the word is prescribed by Pānini V, 2, 112 where the suffix -vala- (-valac) is applied to the words rajas-, krsi-, asuti- and parisad-; to these examples Patanjali adds some other ones, viz. bhrātrvala-, puttravala- and utsangavala-, In the next statra (V, 2, 113) Panini himself mentions two more -vala- formations, viz. dantāvala- and sikhāvala-, but with the addition that they are only used samiñāyāms; in sūtra VI. 3. 118 he mentions the allongation of the vowel preceding -vala- which takes place (e.g. in dantāvala-) when the syllable is not by nature a long one4.

It cannot escape our attention that the Pāli word rajassirain both its senses tallies very well with those of rajasvala. And according to my humble opinion there can be no doubt that the

⁽¹⁾ On this word cf. my work Die Suparnasage, p. 243 with n. 2.

⁽²⁾ rajas. "dirt, impurity" has the sense of "menses" already in the Nirukta, 4, 19 where it is derived from the root ra(n)j.

⁽³⁾ Still other examples are found in Renou, Grammaire Sanscrite, 1, 261 where I miss nadvala- and sadvala- mentioned by Panin IV, 2, 88.

⁽⁴⁾ This allongation, however, does not seem to be de rigueur with Patanjali (cf. puttravala-.etc.)

two words are in reality identical. That the suffix -vala- is only a variation, and generally a younger one, of -vara- is too well known to need any discussion here. It is therefore perhaps. scarcely needed to derive a formation *rajasvara- from rajasvala-; they could both have existed by side of each other, nay, rajasvalacould even have arisen out of "rajasvara- through dissimilation. It has also been observed -e.g. by J. Schmidt, Vocalismus II, 211 sq.—that before an r the a does sometimes in Sanskrit a tendency show (and Prākrit) of developing into an i': thus rajasvara- could very well at a certain time and within a certain area have developed into "rajasvira. And such a form would of course, within Pali develop into the existing rajassira-2. Thus we should find the following line of development: *rajasvara- (=rajasvala-)> *rajasvira-> rajassira-.

7. Skt. nistrimsa-.

The Sanskrit word nistrimsa-according to Pānini V, 4, 73 and the commentaries must originally mean "more than, exceeding thirty". It further means 'a sword' and also-chiefly according to lexicographers—'cruel, merciless'.

That the word nistriméa-meaning "a sword" does really mean "exceeding thirty (angula's)" is clear from Siddh. Kaumudī on Pāṇini V, 4, 73, from Kṣīrasvāmin on Amarakośa, II, 8, 90, and from the commentary on Kauţilya I, p. 61, 3 ed. Jolly, and should not be doubted as is sometimes done in modern works.

⁽¹⁾ Of this development I have collected several examples with which I hope to deal later on as I cannot, for want of space, do it here. I should only like to point out that in cases like giri- Avest. gari- or siras- Avest. sarah- the Sanskrit vocalism is no doubt a secondary one.

⁽²⁾ Cf. examples like assa-<asva-; parissajati<parisvajate or bhassara-

bhāsvara-.

⁽³⁾ Cf. e.g. PTS Pali Dict. s.v. nettimsa; to the passages quoted there might be added the following from the Jātaka: 111, 338. VI, 153. 449.

What is wanted here is only to point to one or two passages from the Jataka-book which definitely prove that this "etymology" is not any learned construction like so many modern ones. Thus in the well known tale of Prince Pancavudha and the ogre (Jātaka No. 55) we read in I, 273, 28: tettimsamgulāyato Khaggo lomesu yeva alliyi; and in III, 338, 16 f., in the tale of a juggler, we find the following passage eko para puriso tettimsanigulam tikhinidharam asiratanam gilati. These passages seem to prove that there existed a distinct sort of swords or rapiers the length of which exceeded thirty finger breadths.

Why the length of this special sort of sword-no doubt even the nistrimsa-should be given as thirty-three inches is not clear. It may rest on a tangible fact, it may also simply be due to the phonetic similarity between the Pali forms nettimsa and tettimsa.2. In any case it seems established even through popular texts that the grammatical explanation of the word nistrimsa- is the correct one

8. P. Khajjopanaka..

khajjopanaka-² (sometimes khajjūpanaka)' means "a fire-fly" and occurs in several pass-

(1) Whether nistrimsa-"cruel, merciless" (a meaning known also in Pāli, cf. Jātaka IV, 118, 24: nettimso ti nikkarvņo) is really the same word as nistrimsa-"a sword" is beyond my power

of judgment.

⁽²⁾ The origin and development of a form like tettimsa=pkt tettisa is, unfortunately, not clear. That they should be derived from trayastrimsat (cf. Pischel, Pkt. Gr. p. 312.) seems to me possible but not very probable. Anyhow, how would it be possible that the same explanation should hold good also for p. tāvatinisa and AMg. tāvattisā, tāvattisā as seems to be generally suggested! In general the development of the numeral for three in certain compounds seems to be open to doubt and objections (cf. my remarks in JRAS. 1926, p. 139 which I fully uphold in spite of the objections of Professor Turner, BSOS. IV. p. 363 sq.)

(3) The PTS Pali Dict. s. v. wrongly gives khajjopakana; also the quotations from JPTS. 1908, are formally wrong.

⁽⁴⁾ Cf. Trenckner, JPTS: 1908, p. 133 n. 1. with an explanation which, according to my opinion, can scarcely be correct.

Ages of the Pāli canon. Keeping only to some passages in the Jātakas we find in II 415, 14 sq. how the heretic teachers (añnatithiyā) lost their glory by the entrance on the stage of the Buddha like fire-flies by the rise of the sun. In VI, 330, 6 sq. the king of Mithilā has the following dream in connection with the conception of the Bodhisattva:

rājangaņe catūsu kaņņesu cattāro aggikhhandhā mahāpākārappamāņen' utthāya jalanti tesam majjhe khajjopanakappamāņo aggi utthahitvā tamkhaņe yeva cattāro aggikkhandhe atikkamitvā Brahmalokappamāņen' utthāya sakalacakkavālam obhāsetvā thito etc. And in VI, 441, 27 sq. the minister Devinda says of the foolish king: ayam rājā kim karoti, aggimhi sante khajjopanakam dhamati '' what then is this king doing—in the presence of fire he blows at a fire-fly''. Of the meaning of the word there can, consequently, be no doubt.

Nor is there any doubt that we have to start our explanation from a form *khajjopana of which 'ka- is only one of the usual-ka- formations. Now, in Sanskrit the name of the firefly is kha-dyota-; and it was only natural that Trenckner, in his extremely valuable Notes to the Milindapañha p. 59 should have tried to identify the Pāli and the Sanskrit word, ascribing to the neighbourhood of p (or) (u) the transition of t into p. However, such an explanation is scarcely possible as no clear case of a development t>p seems to be known. And I thus venture to think that we must give up the direct identification of khadyota-with *khajjopana-.

(2) JPTS. 1908, p. 109.

(4) *khajjopana-, in such a case, should be = khadyotanawhich is said to mean "sun" in Sanskrit.

⁽¹⁾ With this expression cf. the angarah khadyotamātrah of the Chand. Up. VI, 7,3.

⁽³⁾ It would perhaps be possible to suggest that kha-dyota (na) had developed into kha-dyo(y)a(na) and this further into kha-dyova(na). By a sharpening of the v-this might finally have resulted in khajjopa-(na). But such a development seems to me too improbable to be taken into serious consideration.

It seems to me that *khajjopana- could only be safely derived from a form *kha-dyopana-. Now *dyopana- would, of course, be intimately connected with a causative formation *dyopayati of which Sanskrit, as far as my knowledge goes, does show no trace. It is, however, scarcely doubtful that such a formation might have originated in sheer mechanical imitation of really existing forms such as knopayati, gopayati, ropayati etc. And I should venture to find a real trace of a *dyopayati in the AMg. forms njjovemāna-, njjoventa-, njjoviya- which can scarcely, be explained except from a causative stem *ud-dyopaya-1. Also the modern Indian languages seem to have preserved traces of such a formation *If then traces of a form *dyopayati be found in the AMg. as well as in the modern vernaculars there can be no hesitation about deriving p. *khajjopana from an original from *kha-dyopona.

9. P. dussa.

In the Sasajātaka, in the story of the four wise and pious creatures we read the following verse spoken by the jackal (Jātaka III, 54, 1 sq):

dussa me khettapālassa rattibhattam apābhatam, mamsasūlā ca dve godhā ekan ca dadhivārakam, idam brāhmaņa me atthi etam bhutvā vane vasā 'ti.

"From yonder fieldwatchman I have taken away his supper: two spits of roast meat, a lizard, and a pot of curds. This, o Brahmin, is what I have—eat it, and live in the forest".

(3) Cf. Morris, JPTS. 1834, p. 91 whose translation of the word is, however, not necessary.

⁽¹⁾ The explanation of these forms given by Leumann, Aupapātikasūtra p. 105 is undoubtedly wrong. Pischel on Hc. IV, 332; Pkt. Gr. § 246, although he does not mention any form *ud-dyopayati, must apparently have been thinking of the same explanation that is given above.

⁽²⁾ Such, at any rate, was the opinion of Pischel. I am at a loss to find out to what really amounts the explanation given by M. Bloch, La formation de la langue Marathe p. 337 (s.v. jopāvņem) Could all the forms quoted there possibly be derived from dyotana-?

Here duss is admittedly a crux interpretatorum and has at one time been fully discussed by Professor Andersen. His own idea seems to be that we should read, with the Singhalese manuscripts, not duss but dussam which should again be Skt. düsya-"corruptible, easily to be spoiled". However, of the two alternatives dussa is undoubtedly the lectio difficilior which ought if possible to be explained, not to be simply neglected. Besides it seems curious that he jackal should design the profferred supper as "corrupt b'e"—which, by the way, scarcely applies to roast mest and curds.

The commentary has preserved a tradition according to which dussa does realy mean amussa, and that tradition has been endorsed by such a great authority as Trenckner. Henry even goes to the length of putting amussa into the text which cannot well be right.

Personally I venture to think that dussa, although it seems not to be met with elsewhere, is the correct form. Of the pronoun adah we find in Pāli mainly a stem amu- (besides which asu in nom. sg. (m. f.), besides which there is the nom. acc. sg. n. adum. Now just as besides amum we have amussa it would be well possible that besides adum there once existed a rather fortuitous formation adussa which in Sandhi could, of

⁽¹⁾ Cf. Pāli Reader II, p. 124.

⁽²⁾ The translation "wrongfully" given by Francis and Neil Jātaka III, p. 16 is, as far as I understand, rather out of the question.

⁽³⁾ Unfortunately, I am at a loss to find out where Trenckner has referred to the word—perhaps in his unpublished collections at Copenhagen.

⁽⁴⁾ Precis de grammaire Pāli p. 94.

⁽⁵⁾ Mainly the same conditions obtain in the Prākrits, of. Pischel, Pkt. Gr. §432.

⁽⁶⁾ Whether this form is really indentical with the particle adu I do not venture to decide.

course, easily develop into dussa. This I venture to think is the form of which we find a single trace in the Jataka passage quoted 10. P. reruka-. ahove.

In Jataka II, 230, 15 sq. a lady is represented as addressing her unfaithful husband with the following verse:-

tvam eva danim akara yam kamo vyapagama tayi | se 'yam appatisandhiko kharā chinnam ya rerukan till

Here everything seems clear except the last pada which is thus explained in the commentary: kharo vuccati kakaco rerukam vuccati hatthidanto, yatha kakacehi chinno va hatthidanto appatisandhiko hoti na puna purimanayena allivati etc. translation of the verse would consequently run something like this: "thou hast now so arranged it that my love to thee has vanished; no more can it be patched up, just as little elephant's tusk cut in twain by a saw.'11

The word reruka- = hatthidapta-, "elephant's tusk, ivory" is, as far as my very limited knowledge goes, only met with in this passage and seems to be of an entirely obscure origin. original form *reru-, of which this would be a derivation. is nowhere to be found, and even its formation seems rather obscure.

No doubt words exist, though few and far between, that would seem to betray the same morphological construction as the somewhat problematic *reru-. Of the two Rigvedic forms perúand peru-, the meanings of which are not entirely clear, one is said to belong to par-, the other one to pi-; and to one or the

(2) The suggestion of the PTS. Pali Dictionary "probably

dialectical" does not help us much further.

^{(1).} Some offence might be taken at the use of the ablative khara instead of the instrumental; but such cases, I believe, are not altogether strange to Pāli.

⁽³⁾ On the meaning and etymology of the words peru- and peru- (which are often considered to be identical) one may consult s.q. Pischel, Ved. Stud. I, p. 81. sq.; Ludwig, Ueber Methode etc. p. 24; Hopkins, Amer. J. Phil. XIV, 31. 38; Baunack, Zeitschr f. vgl. Sprf. XXXV, 529 sq. 552, 557; Oldenberg, RV.-Noten I, 44 sq. II, 127.

other may belong the derivation peruka-, the name of a man in RV. VI, 63, 9. In III, 2, 159 Pāṇini mentions a seru-which should mean "binding, fettering" and be a derivation from the root si-. There is further the famous mountain-name Meru-which, as to its origin, is completely obscure. Other derivations in -eru, of which there seem to exist a few, are in the main wholly unclear to me and can throw no light on the history of reru-, reruka-.

There is, however, perhaps a way for shedding at least some light, faint as it may be, on the problematic reru(ka). There exists in Sanskrit the word karenu-, well-known since the time of the Great Epics—but probably not earlier—which means "an elephant" but in the overwhelming number of passages is of feminine gender and means "elephant-cow". This form also exists in Pāli (chiefly in the derivation karenukā) and in the Prākrits where the AMg. and the śaurasenī have preserved a form karenu- while karenuyā exists in the Jaina Mahārāṣṭrī.

⁽¹⁾ I cannot find with Professor Kirfel, Kosmographie der Inder pp. 16*. 182 that the suggestion of S. Goldschmidt Zeitschr. f. vgl. Sprf. XXV, 610 sq. according to which Meru should belong to smi- is very plausible. On the contrary the existence of all the other forms of the name, viz. Sumeru-, Neru-Sineru-, Suneru- etc., seem to me obviously to point in the direction of a foreign origin.

⁽²⁾ Completely obscure are maderu- and saneru- in the puzzling hymn RV. X, 106, 6. 8(cf. Bezzenberger, Beiträge II, 269 sq.; Henry, Mem. Soc. de Linguistique XIV, 172. 174; Oldenberg, RV.-Noten II, 329), also a-tameru- in VS. I, 23. mitreru-, according to Oldenberg. RV.-Noten I, 174, seems to be a compound. For himelu- in Vārtt. 7 on Pān'ni V, 2, 122 one might suggest an original form himaryu- (such is also the idea of Bezzenberger l. c.) if there were sufficient reason for assuming such a formation. Whether seruma (dīpa) which, according to Jātaka III, 187, 20 (cf. 189, 23), was the former name of Nāgadīpa suggests the existence of a seru- is probably wholly irrelevant as the word would in no case be of an Aryan origin.

⁽³⁾ Cf. Pischel, Pkt. Gr. § 354.

Generally, however, the Pāh form is kaneru-, and this form is prescribed by the grammarians as being the one denoting the she-elephant also in the Prākrits. From the passages I have looked up, viz. Jātaka II, 342, 3. 7. 20. 25; 343, 16; IV, 49, 20 (where B^d have karenu); V, 39, 12; 50, 9; 416, 22; VI, 497, 1 it is quite obvious that kaneru- means "elephant-cow" and nothing else. To me it seems fairly clear that the word karenu-, kaneru-originally meant nothing but "elephant-cow", and that its extension into the masculine gender is an innovation which is of no real importance for the original sense of the word.

Would it be too adventurous to suggest the karenu-, kaneruis in reality a compound made up by the deteriorative particle kas+ a word "renu- or "neru- meaning "an elephant's tusk". The compound would thus mean "having bad tusks" and would form a good epithet of a derisive nature applied to the elephant-cow. If so were the case I should venture to go a step further and suggest that this word *renu- or neru- were in reality identical with reruka- "elephant's tusk" of which the Jataka passage quoted above has preserved a scanty remembrance. The assimilation of *repu- or *neru> *reru would present no insurmountable difficulties; and on the whole I shou'd deem it probable that eneru-(perhaps across forms like *leru-, *leru-) would be the preferable form. This also tallies with my opinion that of the two forms kaperu- and karenu- the former is the more original one. For, it is easier to believe that kanera by the influence of karini. should have developed into karenu- than to think of another way of development.

⁽¹⁾ Cf. Pischel ad Hc. II, 116.

⁽²⁾ It baffles me why the PTS Pali Dict. should give it the meaning "a young elephant".

⁽³⁾ On this and related particles cf. Wackernagel, Altind Gramm. II: 1.82 sq.; Charpentier, Monde Oriental XVIII, 12 sq. etc.

If there really existed a word "neru->reru(ka). meaning "elephant's task" it goes without saying that it is not of Aryan origin but belongs to one of the aboriginal languages of India. It may at some period or other have been superseded by the Aryan denominations of elephant's tusk which are, like danta, rada- etc., of a rather pale and uninteresting nature.

11. P. Vyamha-.

A Pāli word vyamha- (v. J. byamha-) is known to me from the following passages:

Vimānavatthu 35, 1:

phalikarajatahemajālacchannam vividhavicitraphalam addasam sarammam vyamham sunimmitam toranupapamam rājakūpakinnam idam subham vimānam.

The commentary² explains the word and also tries an etymológy which is, of course, impossible: viharitukāmā vasanti etthā ti vyamham bhavanam. The word consequently means something like "a mansion, a palace.".

The other four passages are all from the Jataka.2

In IV, 464, 26 the king of Benares visits the palace of the Naga Campeyya:

sa rājā pāvisī vyamham Campeyyassa nivesanam ādiccavannupanibham kamsavijjupabhassaram.

The commentary explains vyamhan ti alamkatanāgabhavanam which does not bring us much further. Further in V, 454, 1 sqq. we read the following verse:

(3) Cf. Kern, Toevoegselen II. 134. The passage V, 454, 3(cf. below) is misquoted both by Kern (as IV, 454) and by the PTS Pāli Diet. (as III, 454).

⁽¹⁾ If such be the case even the ka in kaperu-, karenu- may not be the Aryan deteriorative ka- but something quite different-A scholar like M. Przyluski might suggest a solution; personally I am, unfortunately, wholly out of my waters here.

(2) Paramatthadipani, pt. IV (PTS Publ. 36), p. 160.

⁽⁴⁾ The corresponding passage in the Mahāvastu (II, 186, 5 sq.) differs very much (cf. Charpentier, Monde Oriental III, 42) and gives no word that would correspond to vyamha.

dibbakhiddaratiyo na dullabhā cakkavatticaritañ ca mānuse sovaņņavyamhanilayā va accharā

ye caranti pamadah' anatthikā

"Divine pleasures are not difficult to obtain, nor the state of Universal Emperor in a human existence, nor the heavenly-nymphs sojourning in golden palaces to those who live away from the lewd womanfolk." The commentary explains: sovannavy-amhanilayā suvannamayavimānavāsinyo.

In VI, 119, 9 sq. King Nimi occompanied by Mātali arrives at a crystal palace inhabited by fair Apsarases which is thus described:

pabhāsati idam vyamham phalikāhi sunimmitam nārivaragaņākiņņam kūtāgāravarocitam upetam anuapānehi naccagītehi c'ūbhayam.

The commentary simply gives: vyamhan ti vimānam pāsādo ti vuttam hoti. Finally in VI, 251, 20 sq. the wise Nārada speaks thus to a king:

annahatthā ca te vyamhe ghosayantu pure tava: ko chāto ko ca tasito etc.

Where the commentary runs thus: vyamhe ca pure ca rajanivesane ca nagare ca. Of the sense which the commentators attributed to vyamha-there can be no doubt: it means "palace, royal or heavenly abode".

I am far from sure that I can offer any explanation of this apparently old word which does not seem to occur in the later prose texts. If, however, a word vyamhita- does in some Jātaka passages stand for vimhita- = vismita- which undoubtedly seems to be the case, could not vyamha- be = Skt. vesman-? This would undoubtedly develop into "věmha-" or even "vimha-;

⁽¹⁾ This I suppose must be the sense here cf. VI, 175, 13; ns hi etādisā kāmā sulabhā honti māņuse.

⁽²⁾ Cf. Kern, Toevoegselen II, 134.

⁽³⁾ Cf. semha = slesmau- etc.

and the later form may perhaps, under circumstances unfortunately obscure to me, have further developed into vyamha.

12. Skt. Potra-.

According to Pāṇiṇi III, 2, 183 and to later lexicographers a word potra- (which according to them is a derivative from pū.) means "a plough-share" and "a hog's snout". This word cannot, of course, be identical with another potra, which occurs in the Rigveds in the sense of "Soms-vessel used by the potar" or once (II, 1, 2) "the priestly function of the potar."

The etymological connections of a word potra- "a plough-share"—the sense of "a hog's snout" is probably originally identical with this one—do not seem to be quite clear. Leaving aside the derivation from the root pū- we might suggest a relation with the word pavi- which according to Nigh. 2, 20 means vajra-and in the Nir. 12, 30 is a synonym of salya "an arrow"; its other senses also seem to tally well with that of "plough-share". And this leads further to pavīra- (Nir. 12, 30) "a pointed weapon, a lance, a spear", pavīrava- "a thunderbolt", RV. I. 174, 4, and "provided with a metal edge (of a ploughshare)", TS. IV, 2, 5, 3, pavīravant- (with about the same sense), and pavīru-, which probably means "a thunderbolt"." It further seems to me that

⁽¹⁾ There seems to be still another word potra- which is partly explained by vastra and partly by vajra. Supposing the latter-explanation to be the correct one it is no doubt identical with potra- "a plough-share". If, on the other hand, there exists a potra- = vastra this, I suppose, would be identical with p. potthaka- "cloth" (of various descriptions) and ultimately also with pottha in Jātaka II, 432, 16.

⁽²⁾ Cf. also keura-pavi- in SBr. III, 2, 6, 9 (cf. Charpentier Die Suparpasage p. 161.)

⁽³⁾ On possible Persian relations of these words cf. Kors, Někotoryja persidskija etimologii (known to me only through Indogerm. Jahrbuch I, 74); the suggestion does not seem very convincing to me.

we must in some way or other connect these words with the Latin putare the original sense of which seems to be "to cut"; the idea that the above-mentioned Indian words should in some way belong to Latin pavire, which has again been connected with putare, is by the way a time-honoured one, though potra- has so far not been mentioned in this connection.

Upsala, October 1930.

⁽¹⁾ Cf. Bugge, Zeitschr. f. vgl. Sprf. XIX, 416; Walde, Latein. etymol. Wb². 627.

⁽²⁾ Cf. e. g. Fick, Vergl Wb. 1, 677; Curtius, Grundzüge der griech Etym. p. 268.

⁽³⁾ There seem to exist in Pāli two words potthanī 'a butcher's knife' and potthanikā 'a dagger'; but I dare not allow myself any judgement upon these somewhat doubtful words. No suggestion concerning them is made by Kern, Toevoegselen, II. 43.

UVAȚA AND MAHIDHARA.

By Lakshman Sarup M. A. (Panj.), D. Phil. (Oxon.), Professor of Sanskrit Literature at the Panjab University.

Uvața and Mahīdhara have both written commentaries on the Sukla Yajurveda *i. e.*, the Vājasaneyisamhitā in the Mādhyandina recension.

Their mutual relationship and chronology are not clear. In the introductory stanza, Mahidhara acknowledges his indebtedness to the commentaries of Uvaṭa and Mādhava.* From this, one would conclude that Uvaṭa was earlier than Mahidhara. But in commenting on YV. XXIV. 3. Uvaṭa remarks: Hṭludanu falmanu a well as on stanzas XXIV. 3—19; 21—40; XXV. 1—13 is identical with that of Mahidhara. This tends to show that Uvaṭa is later than Mahidhara and has borrowed the latter's commentary on several stanzas.

The express statements of the two commentators go to show that each is indebted to the other, that each has utilised the other's commentary. And the only conclusion which can possibly be drawn from this evidence is that the two writers were contemporaries. But such a conclusion is wrong as would be shown later on.

Further Uvata is described as a son of Jaiyata1 in the

^{*}प्रयुक्त संदर्भी नृहरि गणेशं भाष्यं विसोक्यौबरमध्वस्यम् । _ बहुर्मनूनां विश्विकामि वार्थं परोपकाराय निजेक्सणाय ॥

आनम्द्बुरवास्तम्यज्ञैथ्यटास्यस्य सुनुना ।
 उपदेव कृतं भाष्यं पद्यावरै: सुनिश्चितै: ॥

colophon at the end of Chapter XX but as a son of Vajrața² in the colophon at the end of Chapter XL.

The object of this paper is to examine these discrepancies and to remove them if possible.

There are several editions. It would be well to compare them in order to obviate the errors of a particular edition.

- (a) The commentary of Uvața ed. by Prabhudatta, son of Śrīghana yāma, resident of Sirsakhedi. On p. 524, the following remark is found on XXIV. 3:—महीधरोक्तमर्थं विशिवामि । सुरक्षकः सुनुवाकः etc. On p. 472°. Jaiyața is mentioned as the father of Uvața but on p. 698. Vajrața is stated to be the father of Uvața.
- (b) Śuklayajurvedasamhitā with the commentaries of Uvața and Mahīdhara ed. by Paṇaśīkara, Bombay 1912. On p. 1 Mahīdhara expresses his obligation to Uvața but on p. 447 Uvața says:—महो बरोक्तमर्थं विद्यासी etc. On p. 404 Jaiyața is stated to be the father of Uvața but on p. 610, it is Vajrața.
- (c) Suklayajurvedasamhitā with the commentaries of Uvața and Mahīdhara ed. by Śrī Rāmasakalamiśra, 4 Vols. Benares 1912-15. On p. 10. Mahīdhara mentions Uvața as his predecessor. On p. 1212 the following note is added by the editor:—

श्रत्र मही घरोक्तमर्थं विश्विकामोति पाठ श्रीव्यटमात्र्यं कस्मिश्यदाद्यं केति श्रिष्टिपण्यां समुद्धृत इत्यनुमीयते परंतु मुम्बर्दमृद्धितपुस्तके शोधकेन मृत्यभाष्य-इत इति सन्तिवेशिन इति बाराणसीस्वराजकीयसंस्कृतवाठशालीयोवन्दमाष्य-पुस्तकदर्शनात् सुस्पष्टं भवति ! स व पाठो मया त्यकः । महीधरभाष्यस्थाव सस्वेन पुनस्तत्सक्षियेशस्यात्रयोजकत्यादिति सुधीमितिमावसीयमिति । इतः परं बहुषु स्थलेषु भोष्यद्रभाष्यं भाष्यकृता कृतमेव नास्तीति पूर्वोकीव्यद्रभाष्यपुष्तक-दर्शनात् सुस्पश्चं भवतिति बोष्यस् ।

भ्रामन्दपुरवास्त्रव्यवज्ञ्डास्यस्य सञ्ज्ञाः । उवटेन कृतं भाष्यं पदवाषयेः सुतिश्चिते : ॥

The editor does not seem to be aware of Prabhudatta's edition described in a, as he merely refers to the Bombay edition. Here also on p. 1094 Jaiyata is stated to be the father of Uvata but on p. 1795 Vajrata is given as the name of Uvata's father.

All the three editions agree in mentioning Jaiyata as the father of Uvata at the end of Chapter XX and Vajrata at the end of Chapter XL.

Two editions agree in making Uvata indebted to Mahīdhara but the third denies the indebtedness and states that Uvata did not write any commentary on certain stanzas. But the third edition also has no claim to be regarded as critical for it perpetrates the discrepancy with regard to the name of Uvata's father. Its evidence therefore cannot be accepted with reliability. In any case its statement that Uvata left a few stanzas without any explanation is incorrect as will be shown later on.

It is therefore necessary to examine the commentaries critically.

Internal evidence shows that Mahidhara's commentary is not an independent exeges but a mere amplification of the work of Uvata.

That the commentary of Mahidhara is a mere amplification of Uvata is shown by the following example. Mahidhara lacks originality. He merely expands the remarks of Uvața.

XXV. 16. Uvața's commentary.

निष्किष्युं याग्वचनः । द्वमहे माझ्यामो धयम् । तान् । वेदरूपया वयं तान्प्रसिखान्वेवान् द्वमहे झाझ्यामः। निषि-कानित्यत आह । मर्ग मित्रमिद्दि द्वामिध्यमच्युतसदु- चिक्क्दो वाग्वाचकः । तान् कान् तत्राह् । भगं मित्रमिद्दि मवास ! ब्लस्यैतद्विशेषण्यम् । अर्थमणं मरुषं सोममश्चिनी | देवमातरं दक्षं प्रज्ञापतिमर्थमणं घरुणं सोममश्चना आध्वतो । षा थैः सहिता सरस्वती सुभगा नः अस्माकं मयः सुर्खं अभिध्यमिति भगाक्षीनां विशेषणुम् । न संधते च्योतते तान् पूर्वेया ताम्बेबाल्ष्याक्राधिमया स्वयंभुवा निविदा। करत् कर्गतिवति ॥ २५ ॥ १६ ॥

Words underlined in Uvatas' commentary are repeated by Mahidhara.

XXV. 16. Mahidhara's commentary.

पूर्वया प्राचीनया अक्तिमया स्मयंभुवा निविदा वाचा

सोऽसित् तमच्युतसङ्गवम् । किं च शोमनं मगं भाष्यं

यस्याः सा सुभगा भजनीया सरस्वती भगादिसहिता नोऽस्माकं मयः करत् सुखं करोतु ॥श्प्र॥१६॥ Words underlined constitute the additional Uvata by explanation of the words of

Mahidhara.

Mahidhara goes to the extent of borrowing the quotations cited by Uvata. A few examples are given here:—

- I. 1. (a) यो वृष्टादूर्जसो जायते तस्मै तदाह इति श्रुति: |
 - (b) ऊर्ज बलमाणनयोः।
 - ं(c) यहाे वै भ्रेष्डतमं कर्म इति भ्रुति:।
 - (त) श्विनदुमीति बोभयो: साकांचत्वात्सश्रमयामीति वोचर इति।

All these quotations cited by Uvata are borrowed by Mahidhara in writing the explanation of the self same stanza.

I. 2. धामानि त्रोणि भवन्ति स्थानानि नामानि जन्मानीति च quoted by Uvata is borrowed by Mahidhara on III. 8.

Examples are numerous and need not be multiplied.

On many stanzas, Mahidhara merely reiterates the remarks of Uvața, e. g., XXII 24—33 Paṇa îkara's ed. pp. 429—430:

उ० प्राच्ये । दिग्देवता: ॥२४॥

म० प्राच्ये । दिग्देवताः । २४॥

उ० श्रद्धयः। जलदेवताः ॥२५॥

म० अञ्जय: | जत्तवेषता: ॥२५॥

उ० बाताय , मेघोपयोगडेवता : ॥२६॥

म० बाताय । मेघोपयोगदेवता : । २६॥

उ० श्राये । श्रम्यादय: प्रसिद्धा: ॥२७॥

म॰ सप्रये । सम्यादय : प्रसिद्धा : ॥५७॥

उ० नत्तत्रभ्यः १ नत्त्वाद्य : कासाधिष्ठात्र्य : ।२०॥

म० नक्षत्रभ्यः । नक्षत्रादय: कासाधिष्ठाच्यः ॥२८॥

P. 430:--उ० पृथिव्ये । पृथिव्यादयो सोकाधिष्ठाञ्य: ॥२६॥

म॰ पृथिवयै । पृथिव्यादयो स्रोकाधिष्ठात्र्य : ॥२६॥

P. 430, XXII. 30-33.

उ० असमे । अस्यादयश्च ॥३०॥

म० ग्रसवे। ग्रस्वादयश्य ॥३०॥

उ० मध्वे । मध्वादयो मासाधिष्ठातारः ।३१॥

^{*}See my Indices and Appendices to the Nirukta, pp. 355 -360,

रू मध्ये । मध्याव्यो माखाविष्ठातारः ॥३१॥

उ० बाजाय । बाजादयोऽचाधीशाः ॥३२॥ म० बाजाय । बाजादयोऽचाधीशाः ॥३२॥

उ० ब्रायुः । यक्षेताश्वमेधेनायुः कल्पताम् । एवमप्रेऽपि प्रार्थतामन्त्रः ॥३३॥ म० ब्रायुः । यक्षेताश्वमेधेनायुः कल्पताम् । एवमप्रेऽपि प्रार्थतामन्त्राः ॥५३॥

The evidence of the Benares Ms. shows that the sentence actual and telegrate is not an authentic part of Uvața's commentary. It also shows that Uvața did not borrow Mahidhara's commentary as the same is not given in that Ms.

Mahidhara has himself clearly expressed his obligation to Uvata, so it is clear that Uvata is the earlier commentator and the former has utilised the work of the latter.

To attribute the sentence महीधरोक्तमर्थं विविवामि to Uvata and to print the former's commentary as the commentary of the latter is very misleading. It has actually misled at least one scholar. P. Bhagavaddatta B. A., Superintendent of the Research Department of the D. A. V. College, Lahore, consulted Panasikara's edition. In the commentary attributed to Uvata on XXV. 8. p. 460, Karka, the author of the commentary on Kātyāyana's Śrauta Sūtra is quoted. Bhagvaddatta accepted this commentary as genuine and assigned Karka to a period anterior to Uvata on the authority As Karka himself quotes Harisvāmin, of this quotation. the latter was assigned to a still earlier period. chronological chain, constructed by P. Bhagavaddatta is very weak indeed for the commentary ascribed to Uvata is really Karka is therefore not earlier than that of Mahidhara. Uvata but only earlier than Mahidhara. The dates assigned to Harisvāmin and Karka by P. Bhagavaddatta on the authority of this passage are wrong. It is surprising that P. Bhagavaddatta failed to notice the identity of the commentaries attributed to Uvata and Mahidhara on this and several other stanzas. although both of them are printed close to each other in the particular edition used by him.

The next point to be considered is Miśra's assertion that Uvata did not write any commentary on the stanzas, mentioned above. It is true that Uvata sometimes does not give a detailed explanation of easy stanzas and contents himself by stating that the stanza does not stand in need of any comment, e.g. on XI. 65 p. 204 he remarks: निगद्ध्याच्यात्व.

On XXII. 6. p. 423, he says:—श्रमये स्वाहेति श्राजयो मन्ता: On XXII. 8. p. 424, he remarks:—यते स्वाहा एतीति यन तस्मै यते। स्पष्टमन्यत् ॥⊏॥

But Uvata does not ignore any stanza—except two—and leave it without any comment. Whenever he does not explain any stanza he makes some such remark as any stanza he makes some such remark as any stanza it every etc. Misra's assertion therefore cannot be accepted.

Chapter XXIV gives a list of animals sacred to different deities with reference to the asyamedha sacrifice. It is unnecessary to explain the stanzas in detail. But a general explanation is given by Uvaṭa. While commenting on XXIV. 2 he remarks:—

रोहित (YV. XXIV. 2)

इत्यादयः खेता आयव्याः खेताः सीर्याः (XXIV. 19) इत्येक्सन्तः इतरेषु यूपेषु रोहित। दिषु ये गुणक्यनाः शब्दास्ते गुणिनं पश्ं सन्तयन्ति ।

Hence there was no further comment on stanzas XXIV. 3-XXIV. 19.

He remarks on XXIV. 20:-

वसन्ताय कविक्रजनसम्भयते (XXIV. 20) इत्यादयो विश्वेषां देखावां पृषतः (XXIV. 40) इत्योदमन्ता यूपानतरेषु त्रयादश क्योदमारक्याः प्राच झाजभ्यन्ते । Hence there could be no further comment on stanzas XXIV. 21—XXIV. 40 both inclusive.

He remarks on XXV. 1.

पवं द्रव्यवैवतमप्रसिदं यदपाश्वादिश्यो ऽवगन्तव्यमिति पृथिवीं त्वचेति यावत् । (पृथिवीं त्वचा XXV. 9) There was no further comment on the stanza XXV. 2—XXV. 9, both inclusive.

The question now remains of the stanzas XXV. 10-13.

XXV. 10. occurs as XIII. 4, where Uvata has fully explained it.

XXV. 11. occurs as XXIII. 3, where it has been commented upon.

XXV. 12. occurs once only in YV. and has not been previously explained.

XXV. 13. occurs only once in YV. and has not been previously explained.

The Benares Ms. of Uvața's commentary ed. by Mi ra gives the so-called explanation of Uvața on these two stanzas. But a comparison with the commentary of Mahidhara shows that it is not genuine but merely an adaptation from Mahidhara. Evidently some later reader has tried to fill up the lacuna in Uvața's Ms. But it is clear Uvața's commentary on these two stanzas is not available.

FATHER OF UVAȚA.

The only support in favour of the colophon at the end of Chapter XX is furnished by Bhumasena, a commentator of Mammata's Kāvya Prakāśa. Uvaṭa is described as a younger brother of Mammaṭa and Kaiyaṭa and all three as sons of Jaiyaṭa. But the commentator does not mention the source of his information. His view however has not been accepted.

Uvața has also written a commentary on the Rgvedaprātiśākhya. There are several Mss. of this commentary at the University Sanskrit Library, Lahore. They all describe Uvata as a son of Vajrata. The evidence of these Mss. supports the colophon at the end of Chapter XL.

Further, there is an old Ms. of the commentary of Uvaia on the Yajurveda at the Oriental Institute, Baroda. The Ms. is dated sam. 1464 = 1407 A. D. The date is genuine and is confirmed by the old method of writing. The colophon at the end of Chapter XX clearly mentions Vajrata as the father of Uvaia. The colophon at the end of Chapter XL in this Ms. also gives out Vajrata as the name of Uvaia's father. This is further supported by colophons of the Benares Ms. of Uvaia's Commentary on the White Yajurveda The colophon at the end of Chapter XX is the following: -(sic.) इति श्री उवदक्ती मंत्रमाध्ये विश्वति(त)मोध्याय: 1२०1 संवत १६३४। मिति श्राष्ट्रणाइदि ४ गरी।

The name of father of Uvata is not mentioned yet Misra has printed it wrongly in his edition.

The colophon at the end of Chapter X is the following:—sic. उध्यक्ती मंत्रमाध्य दशमोध्याय:।

म्रानंदपुरवास्तब्यवज्ञाटस्य ख स्तुना । मंत्रमाष्यमिदं क्लुप्तं भोजे पृथ्वी प्रशासति ॥

At the end of Chapter XIII, the colophon is the following:—sic. इति इवटक्तो मंत्रभाष्ये त्रवोदशोध्याय:। १३।

मानंदपुरवास्तव्यवज्जाटस्य च स्तुना । उपटेन कृतं भाष्यमुज्जयिन्यां स्थितेन तु ॥

From these colophons of the Benares and the Baroda Mss., it is clear that the name of Uvața's father was Vajrața and not Jaiyața. The occurrence of Jaiyața in the colophon,

^{1.} See Mss. Nos. 563, 3033, 2187.

^{2.} See Indices and Appendices to the Nirukta p. 72, where both the colophons of this Ms. are copied.

at the end of Chapter XX in the extant editions of Uvata's commentary is an error and should be corrected.

As Uvata wrote at Avanti under the famous King Bhoja (1018—1060 A. D.), his time is the first half of the eleventh century A. D.

MAHIDHAKA.

There are at least three Mahidharas:-

- 1. One is mentioned as a Mahāpaṇḍita-Srī Mahīdhara. His grandson Mahāpaṇḍita Hṛṣīkeśaśarman figures as the recipient of two villages in a copper plate grant of Mahārājādhirāja Jayacandra Deva of Kanauj. The grant is dated Sam. 1232 1175 A. D.¹ This Mahīdhara can be safely assigned to the first half of the twelfth century A. D. i. e. about a hundred years later than Uvaṭa.
- 2. Another Mahidhara is the commentator of the Suklayajurveda. From the introductory stanza, it is clear that he is later than Uvata and Mādhava. If Mādhava stands for Sāyaṇa, then he is later than the 14th cen. A.D.

There is another Mahidhara, the author of Mantrama-hodadhi. I am inclined to identify the author of Mantrama-hodadhi with the commentator of the Yajurveda. The first verse of the introductory stanzas in both the works is almost identical.

The Mantramahodadhi gives the first two verses in the following way:—

प्रणम्य सदमी नृहरि महागणपति गुरुम्।

In both cases, salutations are addressed in almost identical words to Lakshmi, Nrhari, and the Lord of ganas

2. Ed. Calcutta 1892.

^{1.} Indices and Appendices to the Nirukta, pp. 73-74.

and in the same order. This shows the author of both stanzas to be one and the same person. The commentator is therefore to be identified with the author of Mantramahodadhi. A short description of the family is given by the author in the 25th Wave of the Mantra. Mahīdhara was the son of Phanubhatta, grandson of Ratnākara, belonged to the Vatsa gotra. He left his own native place, migrated to Benares, was devoted to the God Narahari. He had a son named Kalyāṇa.*

3. The third Mahidhara is a scholar-scribe. He has composed and copied several Mss. His literary activity covers the period from Sam. 1630—1670 i. e. 1573—1617 A. D. Fortunately several Mss. copied in the hand of Mahidhara were acquired in 1928 by the Queen's Sanskrit College Library, Benares, from the descendants of Mahidhara himself.

I had an opportunity of examining them at Benares in January 1931. I give below a list of the Mss. acquired by the Benares Library and written by Mahīdhara himself.

- (१) स्वरप्रक्रिया
- (२) नृसिहपरिचर्यानुक्रमणी
- (३) षट्स्वरसामप्रकार:
- (४) नृसिंहपूर्वतापनीयोपनिषत्
- (४क) व्तापनीयोगितषदभाष्यम्

सहिच्छुषविज्ञच्छुत्रं वत्सगोत्रसमुद्भवः। श्रासीव् रत्नाकरो नाम विद्वान् ख्यातो धरातले ॥१२१॥ तस्तन्जो राममकः फन्भद्धाविधोऽभवत्। महोधरस्तदुत्पन्नः संसारासारतां विदन् ॥१२२॥ निज्ञदेशं पश्चिच्य गतो वाराणसी पुरीम्। सेवमानो नरहरिस्तत्र प्रन्थमिमं व्यधात्॥१२३॥ कस्यायाभिधपुत्रेण तथाम्यैद्विजसस्तमैः।

(४स) ०तापनीयोपनिषद्दोपिका

- (५) वाजसनेविप्रातिशास्यमूलम्
- (६) हेमचन्द्रविरचित-अनेकार्थसंग्रह:
- (७) गडडपुरास्त्रेतकर्डम्
- (=) सांख्यकारिका with तत्त्वकी पुदी
- (E) मन्तराज—स्य दीपिका
- (१०) प्रक्रियाकौमुदीटीका by महिकिङ्कर:
- (११) कान्यादर्शस्य टिप्पणी by भूमिदासः
- (१२) वैदिकीप्रक्रिया
- (१३) ऋशोकत्रिराजवतम्
- (१४) कात्याचनप्रातिशाख्यम्
- (१५) नीलोत्सर्गविधि:

Out of these, nos. 2, 10, and 11 are clearly stated to have been composed and the rest seem to have been copied by Mahīdhara.

A few passages from these Mss. are given here. Colophons in other Mss. are similar. It is not necessary to give all the colophons of all the Mss. A few samples should suffice. The following will give some indication of the general manner:—

१ नारसिंहपूर्वतापनीयम्

One thing remarkable in these Mss. is the manner in which the name Mahīdhara is written.

Synonyms are used, e. g. Mahidāsa, Mahikinkara, Bhūmidāsa. The real and the original name Mahidhara found in the commentary on the Yajurveda is never used.

Salutations are everywhere to gods Nrhari, Ganeśa, Narakesarī, Mahāganapati, Lakshmi. Salutations of these Mss. bear a very close resemblance to the salutations of the commentary and the Mantramahodadhi.

Further in the Ms. of स्वर्णाक्रया transcribed by himself, Mahidhara gives the information that he was the son of Phanu, grandson of Ratnākara.

He describes his grandfather as **श्रीमणागातपत्रहिज्कुल्लिक:**! It is identical with the remark of the Mantra:—

महिच्छ्यद्विजच्छ्यं etc. नागातपत्र is a synonym of महिच्छ्य. From this identity of salutations and names of the family, it is clear that the scholar-scribe of these Mss. is

[•]See the colophon of Svaraprakriyā, above, p. 20.

to be identified with the author of the Mantramahodadhi and the commentator of the Sukla Yajurveda. His date can now be definitely settled as shown by these Mss. i. e. he is to be assigned to the later half of the 16th Cen. A. D. as the colophons of the Mss. cover the period Sam. 1630—1670, this being the period of his literary activity. All these Mss. were transcribed at Benares and we know from the Mantra that Mahīdhara left his own native place and migrated to Benares. This date is corroborated by the date of the Mantramahodadhi, composed in Sam. 1645=1588 A. D.*

*ग्रब्दे धिक्रमतो जाते वेदबाखनृपैमिते । ज्येष्ठाष्टम्यां शिवस्यामे पूर्णो मन्त्रमहोद्धिः ! पञ्चचत्वारिशदुत्तरषोडशशततमे विक्रमनृपाद्गते वर्षे।

TATSAMA GY

by A. C. Woolner

(1) There are a few words in Hindi written with jn but regularly pronounced with gy: for example gyān 'knowledge' and derivatives from the same root such as gyānī, gyāpak, āgyā; yagya 'sacrifice' etc.

Similar forms are found in Panjabi and Bengali Pb. giān 'knowledge', giān or gayān 'learned', āgiā 'command'. For Bengali see S. K. Chatterji, The Origin and Development of the Bengali Language. p. 462. He records gy, -ggy and gey.

Pb. jagg, B. O. jag, Sindhi jagu (quoted by Beames I. 302.) evidently come from a similar treatment of yajña.

The substitution of a vowel for y and the nasalisation of y may be ignored for the moment. It seems clear that these forms are based upon the pronunciation of Sanskrit jn as gy, which is common to pandits in the North and East of India.

The tadbhava treatment of jñ is indicated by H. nātā 'kinship' (jñātitva) Pb. nāttā. janeu (yajñopavīta). Pb. janeŭ.

Rāṇī 'queen' may have been associated with rāṇā from rājānaka, but cf. Romani rāni.

(2) In Gujrat there is a pronunciation gn as in gnan 'knowledge' (Clair Tisdall records a svarabhakti variety of this; ganan.) Tadbhava forms are janoi (yajnopavita) and jan 'knowledge. In the Marathi country there is the pronunciation of jn as dny, as in the name Dnyanoba, while tadbhava treatment is seen in nate 'kinship' (J. Bloch, Langue marathe, p. 357.) janave (yajnopavita) and perhaps in rani 'queen'.

(There is also j in paij from pratijna. J. Bloch. p. 139. Cf. Old H. jaj for yajna.)

(3) These varieties gy, gn and dny do not seem to be Prakritic. Pischel, Grammatik der Prakrit Sprachen, §276. gives the following treatments of jñ.

- (i) Regularly jn becomes nn (or n) e. g ānā from ājnā,
- (ii) It becomes nn (n). AMg. nāṇa 'knowledge'. cf. H. ñātā, janeu, M. nātē, jānavē.
- (iii) In Māgadhī and Paišācī jñ becomes ññ (ñ). according to Hemacandra, yañña from yajña.
- (iv) According to Hemacandra jñ also becomes jj in some words: ajjā from ājñā, jāṇa from jñāṇa.
 - cf. Mar. paij from pratijñā. Old H. jaj from yajña.

There was also the svarabhakti method: Pāli rājinī. Old H. rāginī.

Three of these survive in Marathi and J. Bloch remarks (p. 139.) "ni dans l'histoire ancienne ni dans la répartition des dialectes modernes on ne trouve d'indication permettant de rendre compte de cette diversité."

It is clear that once the process of prakritic assimilation is complete as in the four treatments given above, there can be no phonetic reason for going on to gy, gn or dny.

In other words this variation in the pronunciation of Sanskrit is not due to the influence of the Prakrits or of modern Indian languages. Whence then can it come?

(4) If we are to form any idea as to how the diversity arose, we must determine a more ancient pronunciation of in.

If we assume this to have been $j+\tilde{n}$ i. e. something like $d_j+\tilde{n}$, we may be satisfied about the origin of dny.

If again & is not a true palatal but comes forward nearer to an alveolar or dental & or dz, then (&)n or (dz)n would become by assimilation nn (n).

The survival of j in paij and jaj would show the other method of assimilation.

But we are no nearer to gy and gn.

(5) Now Sanskrit j is ultimately derived from a palatal stop \sharp or we may conveniently write g'.

S. K. Chatterji ' tells us that the affricate pronunciation of the palatal stops seems to have been only dialectal in the Early M. I. A. period and that for some time the stop value and affricate value went on, side by side.

The present writer had long suspected that Old Indo-Aryan possessed true palatal stops not affricates.

Macdonell however thought the affricate pronunciation indicated by the Greek reproductions of Indian names made it likely that they were so pronounced in Vedic times. (Vedic Grammar, § 35. cf. Wackernagel, I. 119.) It is true that an affricate pronunciation of j in Iranian is required to account for the variation z in Avestan and d in Persian corresponding to Sanskrit j. (Cf. also Old Persian xšnāsātiy 'Let him recognise' and adānā 'he knew'. Meillet, Grammaire du Vieux Perse, pp. 60 and 99.)

But in either case to whatever date the palatal stop g' survived in pandits' speech it is quite possible that it survived still longer in the complex g'ñ.

- (6) Supposing we start with g'n, this might change in two or three different ways.
 - (i) where and when the palatal $\tilde{\mathbf{n}}$ was no longer correctly pronounced $\mathbf{g}'\tilde{\mathbf{n}}$ could be replaced by $\mathbf{g}\mathbf{n}$.
 - (ii) Before that the assimilation of the nasal to the stop but leaving an offglide y would result in gy. Cf. the assimilation of gn to gg.
 - (iii) When g' had been replaced by palatal d' and then made affricate de or dz, the complex g'n could become d'n and then dny.

Or we may state the matter thus:— Pandit speech.

> g'ñ - g'n^v - (g)gŷ-gy. gn. d'ñ - dny.

⁽¹⁾ Bengali Language. p. 245 ff.

Prakrit.

d'n - ññ

μ'n

Later (dz) $n \ge j$ or n.

If that is so, the variation gy, gn, dny goes back to a variation in pandits' speech caused by replacing g' by d', to which standing by itself a sibilant was added instead of an off-glide resembling y.

(7) It may be asked whether there are any other instances where variations in the pronunciation of Sanskrit seem to be independent of ordinary prakritic changes.

One such instance may be the rendering of the cerebral \$ by kh. Some pandits say upanikhad for upanişad. (Cf. the form Oupnekhat of Anquetil Duperron from a Persian transcription) Hindi and Panjabi represent Sanskrit cerebral \$ as kh-bhākhā for bhāṣā. On this see S. K. Chatterji, Bengali Language, p. 243. where he says "in certain forms of OIA. the [X] sound was actually the one employed for [\$], as we can infer from a mediaeval pronunciation of [\$] as [kh] which still obtains, -[kh] being the nearest Middle Indian approximation to a traditional [X]". He then mentions Slavonic snuxa, synuxu= Skt. snuṣā, sūnuṣu and the wellknown variation Pashto and Pakhto.

(8) If s is a sibilant variant of x which survived dialectically in OIA. of Northern India and is still represented by Middle Indian and modern kh, we might expect to see the effect of this variation in the complex ks.

In an x-dialect this would be kx. Such may be the source of the tatsama pronunciation khy and the prakritic kkh.

In a sibilant dialect it would be ks, now the orthodox Sanskrit pronunciation. In this complex Prakrit has replaced k with a t sound.

ks-ts-ts* i.e. cch.

Efforts to account for the variation ks becomes kkh or cch on the basis of a distinction in Indo-Iranian have not been successful. (See Pischel, Prakrit Grammar, §§318-321. Geiger, Pali Grammar, §56. J. Bloch, Langue marathe, §104.)

According to the view suggested above the variation depends on more or less of sibilation in OIA. and is parallel to the variation of kh and s and at a little distance to that of gy and dny.

All three non-sibilant pronunciations are found in Northern India, though gy has extended into Bengal, and in the Prakrits forms with kkh and cch are considerably intermingled.

(9) It has to be realised however that these are not so much variations in local speech as variations in the habits of learned speech, which is much more conservative on one hand, while it has on the other hand a tendency to make a conscious effort to avoid vernacular errors, especially in periods when Sanskrit schools are flourishing. Consequently the exact form of a semi-tatsama will depend not merely on local phonetics, but also on the pandits and the degree of their influence at a particular period. This is illustrated by some of the modern forms of proper names e.g. Krishan, Kishan Kisan as opposed to Kistna and tadbhava Kanha.

From this point of view it would be of interest to reconstruct as far as possible the history of the pronunciation of Sanskrit in different parts of India.

YASNA XXXI

By Irach Jehangir Sorabji Taraporewala

The thirty-first chapter of the Yasua has been translated and annotated by Jackson under the title A Hymn of Zoroaster. Another translation of it is by Andreas and Wackernagel in the Nachrichten der königlichen Gesellschaft der Wissenschaften zu Göttingen, 1911. A third one is that by Bartholomae. There have been others also much earlier, but these three mentioned here may be taken as the "latest". I have consulted all three and have here attempted to give my own version of this chapter basing my translation mainly upon what I concieve to be the main purpose of the Message of Zarathushtra. I give here merely the rendering, each verse followed by the translation $p_{\bar{a}}da$ by $p_{\bar{a}}da$. In this place, however, it is not possible to indicate all my reasons for differing from these great predecessors of mine. My only object herein is to give a consistent and, as far as possible, as literal a rendering as I can. I have explained some points in the very short notes that follow each verse.

1. tā¹ vē² urvātā³ marentō⁴
aguštā⁵ vacā⁴ sēnghāmahī¹;
aĕibyō³ yōi³ urvātāiš¹o drujō¹¹
Ašahyā¹² gaĕōā¹³ vīmerencaitē¹⁴;
at²³ -cit¹¹ aĕibyō¹† vahištā¹³
yōi¹⁰ zarazdā²⁰ anhen²¹ Mazdāi³².

Translation .

Heeding these two-Laws, unto ye (O men). do-we-proclaim the Message (so long) unheeded; for those who because-of-the-lures of Untruth destroy the creation of Aša; and for them, indeed, most of-all, who are heartily-devoted unto Mazdā.

(4. Lit., "remembering". 6. Lit., "words". 10. Lit., "through the teaching (or laws)", originally ins. plu. 18. Lit., "best of all".)

The two Laws referred to here are the laws which ordain "long punishment for the follower of the False, and happiness for the follower of the Truth" mentioned in the last verse of the previous chapter of the Yasna (xxx. 11).

2. yezī¹ āiš² nōiţ³ urvānē⁴

advā¹ aibī¹ -dərəštā¹ vaҳyā°,

at⁰ vā¹⁰ vīspāng¹¹ ayōi¹² ;

yaðā¹в ratūm¹⁴ Ahurō¹⁵ vaēdā

Mazdā¹¹ ayā¹⁵ āsyā¹⁴,

vā²⁰ Ašāt²¹ hacā²² jyāmahī²³.

Translation:

Since, because of these (luves, there is) not, while choosing the better path clear in-sight, therefore, to ye all am-I-come;

as¹⁸ Teacher¹⁴ appointed¹⁶ by Ahura¹⁵,
the Creator¹⁷ (has sent me to stand) between these¹⁸
parties-twain,¹⁶
that²⁰ we-may-live²⁸ in-harmony²² with A\$a²¹.

(4. Originally dat. inf. 13-16. Lit., "as Teacher Ahura knows". 21-22. Lit," "though Aša", i. e. devoted to Aša.)

I would like to point out that the arrangement of this verse is in two $G\bar{a}yatr\bar{\imath}s$.

3. yām¹ då² Mainyū³ Āorā⁴ -cā,⁵

Ašā⁴ -cā⁻ cōiš⁴ rānōibyā³ všūtəm¹⁰,

hyat¹¹ urvatəm¹² cazdōnnhvadəbyō¹³;

tat¹⁴ nē,¹⁵ Mazdā,¹⁶ vīdvanōi¹⁻ vaocā¹⁶¹

hizvā¹⁰ owahyā¹⁰ ånhō²¹,

yā²² jvantō²³ vīpāng²⁴ vaurayā²⁶.

Translation:

What Thou bestowest through-(Thy)-Spirit and through-(Thy)-Fire,

' and' the Bliss' (attainable) through A#a' has-thou-promised to-both-parties,

(and) what¹¹ the Law¹² (is) for the discerning¹², that¹⁴ unto us¹⁵, O Mazdã¹⁶, declare¹⁵ for-(our)-enlightenment¹⁷, with words¹⁶ from-Thine-own¹⁶ mouth ¹ that¹⁷ I-may-convert²⁵ all²⁴ the living²².

- (8. Lit., "Thou hast taught". 19. Lit., "tongue.")
 - 4. yadā Ašem zəvīm anhen, Mazdās -cā Ahurānhō, ašī -cā Armaitī,

Vahištā¹¹ išasā¹² Manauhā¹³ maibyō¹⁴ Xšaðrəm¹⁵ aojonghvat,¹⁶ yehyā¹⁷ vərədä¹⁸ vanaēmā¹⁹ drujem.²⁰

(8. I read the final vowel of this word long on the strength of the restored Ur-text as given by Andreas. No other text, nor any ms. supports this reading.)

Translation:

When Aša is to-(our)-prayer-inclined, (and Ye) Lords-of-Creation and Lords-of-Life, together-with the Holy Armaiti,

(then) through-the-Best²¹ Mind²⁸ shall I-seek²²
for ourselves¹⁶ the strengthening²⁶ Power,²⁸
through-whose²⁷ increase²⁸ we-may overcome²⁹ the Enemy²⁰
(4. Originally plu. 14. Originally sing.)

5. tat¹ moi² vīcidyāi³ vaocā⁴,

līyat⁵ moi,⁴ Ašā⁻, datā⁴ vahyo³;

vīduyē,¹° Vohū¹¹ Mananhā,¹² ¹²

mēn -cā¹⁴ daidyāi,¹⁵ yehyā¹⁰ -mā¹⁻ ərəsis;¹²

tā¹⁰ -cit²° Mazdā²¹ Ahurā²², ²²

yā noit²⁴ vā¹⁰ anhat²° anhaitī²¹ vā²⁵.

Translation:

That-I-may-decide, declare unto me this, what better (reward) on me, O Așa, shalt-Thousant

(declare), O Vohuss Mano, 12 that-I-may-knows, and grant's to me (that), whereby Blessings's to me' (may-accrue);

all these. 10 O Mazda Ahura. 12 (do Thou declare). whatever there shall-be or shall-nots bes.

(3 and 15 are both originally dative infinitives. 18. Originally sing. The last word of the verse, vas, has been omitted in the translation.)

> ahmāi anhat vahistəms, 6. ye' mōi widva vaocat hai@im* māðreme yime Haurvatāto,11 Ašahyā" Ameretātas" -cā"; Mazdāj¹⁵ avat¹⁶ Xsatrəm¹⁷ hyat's hoi's Vohu's vaxsat21 Mananha22.

Translation:

Unto him1 may the Best2 befall3,

who, the Wise-One, shall spread my Truth the Word, which (giveth promise) of Perfection, (the Word) of Asa, 22 (giving promise) of Immortality 15 as wells:

(accrue)

(unto him may) that Power of the Lord of t which for him shall Good Mind increase ...

(7. Lit., "shall tell". 15. Dat. used for gen.) 7. yas¹ -tā¹ mantā¹ pouruyō¹ raocabis roiswen Yasra' hvő Xraewā dāmis Asəm1: yā12 drāvayat18 Vahištəm16 Mano16 tā16. Mazdā17. Mainyū12 uxšyo10, yato an nurame -cite, Ahuras, hamos.

Translation:

He, (our) first Father, planned-out the Realms of Light refulgent with-(His)-Glory, Himself in (His)-Wisdom the Creator of Asa; (that) by which the Best Mind is upheld.

through that¹⁴, @ Mazdā¹⁷, increase¹⁹ (Thy)-Spirit¹⁶ (amongst us);

- O Ahura26, even23 uptil21 now28 Thous0 (art) the semie28.
- (1. Lit., "who". 3. Lit., "thought". 6. Lit., "mixed with", "clothed in". 13. Lit., "He upholds" (active verb). 20. Lit., "who".)
 - 8. yat owā: māṇghī pourvīm,

 Mazdā, yazūm stōi mananhā,

 Vanhāus patarəm Mahanhōn;

 hyat: owā: (hām): cašmainē hēṇgrabəm;,

 haioīm' Ašahyā: dāmīm',

 anhāuš' ahurəm' šyaooanaēsū.
- (1. Geld. and others read at: Geld. notes that only one ms reads yat. 6. Geld., Kan., Jack. and Mills read yezīm. I have accepted the reading of Wester. and Barth. Andreas has yozūm. Geld. mentions the reading adopted here on p. 111 of the Yasna as also in his Prolegomena (xxvii). He also mentions the readings yazəm and yüzəm)

Translation:

1

That I-may-recognise Thee (as) the Oldest

in-(my)-mind, O Mazda, (as also) being the Youngest, (and as) the Father of Vohu Mand:

that1: I-may-apprehend14,10 Thee12 in-(mine)-eye26

(as) the true¹⁷ Creator¹⁹ of Aṣ̃a¹⁸,

(and) Lord Supreme over-actions in-(this)-world.

- (4. Lit., "First". 8. Originally ins. sing. 16. The han- is clearly tautological. 20. Originally gen. sing.)
 - 9. 6wōi¹ as² Armaitiš³,
 6wōi⁴ āʾ gāus⁴ -taṣā⁺ as⁴ Xratuš³,
 Manyāuš¹⁰, Mazdā¹² Ahurā¹²;

lıyat¹³ aXyāi¹⁴ dadā¹⁶ pabām¹⁶, vāstryāt¹⁷ vā²⁸ āitē¹⁰, yā²⁰ vā²³ nōit²² ayhat²⁰ vāstryō²⁴. (6-7. I have ventured to join these two words as a compound.)

Translation:

Thine, has-been Armaiti,

Thine, too, has-been the Wisdom World-creating, (the Wisdom) of the Spirit, O Mazda Ahurā;

then¹⁵ Thou-hast-granted¹⁵ unto her¹⁴ the choice¹⁶
either¹⁸ to come-away¹⁹ from-(her)-Protector¹⁷,
or²² (from him) who²⁰ never²² was¹³ (her) Protector⁴.

(14. Namely, Mother-Earth, implied in the word gous. 16. Lit., "path".)

10. at hī aya fravarətā

vāstrīm⁵ axyāi⁶ fšuyantəm⁷, ahurəm⁸ ašavanəm⁹, Vanhāuš¹⁰ fšānghīm¹¹ Mananhō;¹² nōit,¹³ Mazdā,¹⁴ avāstryō¹⁵ davās¹⁶ -cinā¹⁷ humərətöiš¹⁸ bayštā¹⁹.

(2. V. l. hē. 16. V. l. daēvās-, daēvās-.)

Translation:

So1 she2 chose4 out-of-these-two8

(as) Protector⁵ (and as) Shepherd⁷ for herself⁶ a Lord⁶ possessing-Aša⁶,

a promoter" of Good Thought;
never" O Mazda (can) the Destroyer.

even-though 17 -he-strive 16, partake 19 of-the-blessed-Message 10.

(For the ideas of the first two pidas compare Yas, xxix 6. 10, 12. These words almost mean "Goodwill to mankind". 15. Lit, "non-protector" 16. Originally present participle. 18. The evaryation.

Verses 11 and 12 are closely connected together in thought, hence they are to be taken together.

11. hyat¹ nē,² Mazdā⁵, paourvīm⁴ gaēoās⁵ -cā⁵ tašō daēnās⁵ cā⁴,

θwā¹⁰ Mananhā¹¹ χratuš¹³ cā¹³:

(*This word has to be supplied from the 3rd pada. 6. The implication is also "with his mind", hence also the word "mind" is not used again in pada 4. 7. Lit., "good".)

THE PRAKRIT IN KUNDAMĀLĀ.

Paravastu Venkata Rāmānujaswāmiń, M. A., Vizianagaram.

INTRODUCTION

The Kundamālā was first published in 1923 by Messrs. Rāmakrishna Kavi and Rāmanātha Sāstri in the Dakshinabhārati Series. The edition was based on four incomplete Mss., two from Mysore and the other two from Tanjore. The latter are wanting in the beginning and the former in the Prologue mention Dinnāga as the author of the work. The Tanjore Mss. however ascribe the work to Dhiranāga in the colophon. I do not propose to discuss directly the question of authorship and decide between them, but I am now concerned with the exhibition of the nature of the Prākrit contained in the drama and the determination of the period to which the language can be assigned. I shall thus try to throw side light on the question of authorship.

I know some scholars urge that the character of the Prakrit found in a drama cannot be accepted as a criterion for the determination of the age of composition of the work, for it depends more upon the place of origin of the Mss. rather than the age of the language. The Prakrit in the dramas is also subject to a good deal of corruption at the hands of ignorant copyists. It is greatly influenced by Sanskrit in which, rather than in Prakrit, the writers were well versed. They depend more on the conventional rules of grammar rather than on tradition and thus the language of the dramas, to whichever age they may belong, assumes a uniformity of character and frustrates any attempt to use it as a test of age. These remarks, however true they may be, need not drive us into despair. The last applies equally well to every dead language, and particularly to Sanskrit which had been stereotyped long before Präkrit was; and yet the linguistic test as applied to Sanskrit is generally accepted as a criterion for

determining the age of a work. There is an inner life in language behind the outer form of words which presents a new appearance from age to age; and the Prākrit language is no exception to this rule. We can by discrimination eliminate local peculiarities and scribal mistakes to a high degree of certainty.

The Kundamala is a drama in six Acts recounting the story of Sītā subsequent to her second exile from Ayodhyā. Sītā succumbs to a second ordeal and is reunited with Rama to spend many a year of further happiness in his company. is conventional to close a drama with a happy ending and hence the deviation from the Rāmāvana. A distinguishing feature of this drama is that it includes the character of the Viduşaka, which does not generally appear in the Rama Plays'. The characters in the drama are few and those that speak Prākrit are fewer still in number. The female characters, Sitā and Yajñavedi and Vedavati, and the male characters, the Viduşaka and a tapasa, are the only ones that employ Prakrit; but the amount of Prakrit in the drama is considerable. The whole of Act. II with a major part of Acts I, III and IV besides considerable portions of Acts V and VI are in Prakrit. Unfortunately there are lacunae in the Prākrit passages wherever they happen to be considerably long and the readings of many an other passage are corrupt². But the passages that are free from doubt are considerable enough to enable us to form an idea of the nature of the language. The uniformity of dialect is also a favourable circumstance; all the characters employ only one dialect, the Sauraseni.

The chief peculiarities of the Prākrit dialect in the drama are the following: -mātra is represented by -matta although -metta occurs in a single phrase (§1). pūrva always appears as puvva (§2) but in puruṣa the u remains unchanged. t is as frequently lost as it is voiced (§6) and punar always appears as una (even

^{1.} The Adbhutadarpana which presents the same feature is also from South India.

^{2.} The other edition printed at Lahore is little better.

after anusvāra) and only once as puna (after anusvāra) (66). l is frequently changed into cerebral ! (§11). jñ is always represented by nn, never by nn (§16). ks always assumes the form kkh (§18). ny is always turned into nn (§20). ry is always changed into yy (§22). This last is not a sign of antiquity but only a local peculiarity. The Acc. pl. n. of stems in a ends in -āim (§24) and the Loc. Sg. of stems in -ā in -āe and not -āam (§25). The Gen. Sg. of ātman is either attānaassa or appānaassa beside attano (§30). The Nom. pl. and Gen. Pl. of aham are amhe and ahmānam (§32). tava appears beside tuha (§33). The fem, of bhavam is always hodi (§29). disa appears regularly instead of dissa (§46) and kisa instead of kissa (§2); kocci never occurs (§36). drs appears as dams always except once (§10), but grah appears as gahņa (§44). The Inf. of kr is kādum (§53) and indeel, part, of kr and gam are kadua and gadua, although gacchia is once found (§52). khu (khalu) never appears as hu (earlier) or kkhu (later) (§55). dāņim always appears with final anusvāra and api as vi (\$55). haddhī (with long final vowei) is more frequent than haddhi (§55). The particle ama, which is frequent in Bhāsa and Kālidāsa, is strangely missing in the present drama. The above peculiarites show that the Kundamālā presents the normal Prākrit of the later dramas. The following detailed exposition points to the conclusion that the Prākrit in the present drama has passed the stage of transition and presents the settled form of the 6th or 7th century, stereotyped by the grammarians. As is to be expected of a drama discovered in South India, its language shows some of the peculiarities of South Indian orthography, the chief of which are the representation of ry by yy (§22) and of the doubling of a consonant by a small circle placed before it (§10) which is usually represented by the sign for anusvara. I have drawn attention to these in their proper places in the following exposition.

PHONOLOGY—Vowels.

§ 1. Changes of quality:—Medially Skt. r is never represented by a except in the forms of the rt. grah. It is usually repre-

sented by i, but in the neighbourhood of labials, it appears as u. Thus hiaa (hrdaya) i. 18; ii. 13, 25, 26; ditti (drsti) i. 82, dithi, diththim iii. 30 diththo ii. 12 diththa v. 21 (probably all to be corrected into tth); ākidi (ākrti) iv. 75, padikidi (pratikrti) i, 82, kide (krte) ii. 19; also kidam (krtam) i. 82, kido (krtah) ii. 13: nisamsattana (nrsamsatva) ii. 43; didha (drdha) vi. 59, ii. 39; paidi (prakrti) ii. 12; jaicchā (yadrechā) ii. 55.—utta (vrtta) i. 6, 86, 108. iv. 79 vi. 129 and uttanta (vrttanta) i. 48, ii. 6, 7, iv. 7 beside -vutta ii. 12, 42, iii. 1, iv. 2, 42, 68 v. 7 and vuttanta ii, 17, iv. 70, v. 25; nihuda (nibhrta) iv. 75; pahudi (prabhrti) i. 96, iv. 77 beside paudi iv. 5 (probably to be corrected).—asadisa (asadrsa) iii. 39, idisa (idrsa) iv. 40, kidisa (kidrsa) ii. 17, iii. 30, 47, tādisa (tādrša) i. 80, ii. 42 tāisi (tādrši) i. 96 beside amhārisa (asmādrša) v. 13, īrisa ii. 43, v. 19, 123, edārisa (etādrša) iv. 40, mārisī (mādršī) ii. 12, sāricca (sādršya); vāvuda (vyaprta) iv. 36. -Initial r is very rare: mahesi (maharsi) i. 82, iv. 38, v. 25, vi. 90 and rāesi (rājarṣi) v. 25.

The change of a into i is found in dinna (datta) iii. 27, v. 86 and baliam (balavat) iv. 16. It is not changed into i in sampakka (sampakva) iii. 1. It is changed into e in bharuvvehana (bhārodvahana) beside bharuvvahana i. 12 (probably to be corrected) metta (mātra) i. 40, beside matta ii. 19, iii. 55, mahesi (mahrṣi) i. 82 etc., and to o in sonti (santi) i. 64 (probably to be corrected.) adimuttu (atimuktā) iv. 79 beside muttākalāva (muktākalāpa) v. 7 may be due to Dravidian influence.

On the other hand i is changed into a in pudavi (pṛthivi) ii. 12, pudhavi v. 7, pahādae (prābhātike) iv. 79 and into u in dudia (dvitīya) ii. 3, iv. 74—u is changed into a in pāṇḍara (pāṇḍura) ii. 13 beside paṇḍura iv. 13. It never appears as i in purusa i. 88 ii. 12, iii. 30, v. 25, iv. 5, 38.

i for e is met with in narinda (narendra) v. 5 and pavisida (pravesita) iii. 30; ettiä i. 64 for itthiä (strī) may be a mistake.—u for o is found in Tiluttamā (Tilottamā) iv. 1, 3, 87 and in the analogous Siluttamā iv. 87. Also in manuhara.

(manchara) iv. 13 beside manchara iv. 75, vandanuvvaāra (vandanopacāra) ii. 13, pucciadi (procyate) iv. 15 and bharuvvahana cited above.

The usual representation of ai and au are e and o; thus Kekai (Kaikeyi) i. 22, nemisa (naimiśa) ii. 7, iii. 1 and Kosio (Kausikah) iv. 74 Somitti (Saumitrih); but the following are noteworthy: mumde (maugdhye) ii. 42; Vaidehi ii. 13, iii. 50, v. 13 without change. kudūhala i. 14 is from kutūhala and not from kautūhala as in the chāyā.

§ 2. Changes of quantity:—ě and ő are frequently met with: bhuvaņěkka (bhuvanaika) vi. 93, Umāmahěssarā (Umāmahesvarau) ii. 12, ěttha (no chāyā) i 6 and many times, but ěttā, once (probably to be corrected), ěvva and ěvvam (17 and 28 times) beside eva and evam (twice each) ěkkam v. 77 and ěkkena i. 64, jěttha i. 76, ii. 3, v. 86; Ayőjja (Ayodhyā) i. 66, jógga (yogya) iii. 27, iv. 52.

The other long vowels are also regularly shortened before conjunct consonants: āsaṇṇītthamaya (āsannāstamaya) i. 68, pūvva (pūrva) iv. 70 beside apūvva iv. 11 and pūvva may be due to mistake in copying or printing. rūpa- v. 21 for rūpa beside rūva iv. 1 and rūpa vi. 93 and ṇivvāsidum (nirvāsayitum) i. 60 beside ṇivvāsidā (nirvāsitā) i. 96, iii. 39 are to be similarly estimated. In ācchāia (ācchādita) ii. 13 and āṇa- (ājña-) i. 66, 84, 98, iv. 52, v. 21, 31, 119, vi. 115, the ā remains long, paḍihāra v. 21 is, perhaps to be referred to pratīhāra and not to pratīhāra as in the chāyā.

Shortening of unaccented vo vels: dakkhinapaha (dakṣinā-patha) iv. 14, taha (tathā) always, jaha (yathā) i. 14 etc., (9 times) beside jahā ii. 42, jahāhippāam (yathābhiprāyam v. 43, alia (alīka) ii. 12, iv. 85, v. 13, adavi- (atavī-) iii. 1, anuggahida (anugrhīta) iv. 38, nigahida (nigrhīta) i. 40 and gahida ii. 50, iv. 3 beside gahīda v. 49, tapassini- (tapasvinī-) ii. 5 (in verse), dudia (dvitīya) ii. 3, iv. 74, patthania (prārthanīyā) ii. 12, haddhi (hā dhik) vi. 80 beside haddhī i. 82, iv. 36, 40, always repeated except

once (iv. 36). annahā (anyathā) iv. 91, savvahā (sarvathā) iv. 40, 68, v. 58 and ahavā (athavā) iii. 30, 55. iv. 40 are never shortened.

Compensatory lengthening: kāduṃ (kartum) iii. 1, tā (tat) i. 12 etc., kīsa- (kiyat-) i. 12, nīsāsa (niḥśvāsa) ii. 34, iv. 16 beside nissāsa ii. 12, -sīhāṇaṃ (simhānām) ii, 5 (in verse) beside simhāsaṇa v. 5, 62, 64, dīsa- i. 82, iv. 38, 89, vi. 93; never dissa. gaiṃ (gatim) ii. 12 beside gaiṃ iii. 1, v. 15 may be a mistake. bāhūjualeṇa v. 7 bāhujualeṇa may be due to accent. As to -ādo, Abl. suffix, see below §24.

- § 3. Loss of vowels:—api regularly appears as avi at the beginning of the sentence and as vi elsewhere (6:40). idānīm always appears without i:11 times as dāṇim and once as dāni, i.82 (perhaps to be corrected), and once even at the beginning of the sentence (iii.27). iti regularly loses its initial, appearing as ti after a consonant and as tti after a vowel, only once (iv. 14) after a consonant (probably to be corrected). nam (nanu) ii. 37, 47; nu is once (i.48) rendered as nanu in the chāyā, perhaps wrongly (cf. §55)
- § 4. Changes of syllables:—sotthinā (chāyā: sukhena) i. 108 is perhaps connected with svasti; donnam (dvayoh) v. 77.

aya into e: The affix aya alone is changed into e but not the product of i and ana: adivāhemi (ativāhayāmi) ii. 11 etc. nāsādemi (nāsādayāmi) iii. 1, damsedu (daršayatu) iv. 1 etc. But Rāmāaņa (Rāmāyaṇa) ii. 5, naaṇa (nayana) ii. 13 etc. saaņa (sayana) i. 18 etc.

apa and ava into o: apa always appears as ava except in osarissam (chāyā wrongly apasarāmi) iv. 36, 38, 74. But apacaya iv. 5 apasara- iv. 19 apakkama- iv. 74 are peculiar. They are perhaps mistakes. ava frequently appears as o, thus odara (avatara) i. 14, 6, v. 62, ociņomi (avacinomi) iii. 27, oaria (avatīrya) iv. 1 but ogāha iii. 27. iv. 5 beside avagāha i. 14; also avaņāhayadi iii. 30, avaloaantī iv. 17, avamāṇidā v. 104 and avaṭṭhidā v. 21.

§ 5. Intrusion of vowels:—a: sakkanomi (śaknomi) iv. 40 saa-7 (sva-) i. 64, 108, parihariasi (parihriyase) iv. 72.

i: itthiā (strī) i. 52, 88, ii. 12. iv. 5, 38: ettiā i. 64 is doubtful; parisa (sparša) i. 14, ii. 12, iv 68; silāhā (ślāghā) i. 78, ii. 29, siņeha (sneha) iv. 14 siņiddha (snigdha) v. 5, 21.

u: tuvara- (tvara-) ii. 50, v. 1, duve (dvau) ii. 1, v. 21, paduma (padma) v. 5, sumara- (smara-) i 62, 66, iii. 33, iv. 14, v. 11, 15, 27, 58.

Simple consonants.

- § 6. Breathed consonants: -Medially k and c are, as a rule, dropped but in compounds initial consonants of the latter member are sometimes retained; thus Rāhava-ula i. 66. vi. 90 beside Rāhavakula i. 82. Other exceptions are Kekale (Kaikeyyā) i. 22, Sākeda (Sāketa) v. 64 and parakeraa ii. 26, iv. 64 beside para raa ii. 26, kim, often beside im, thrice. ca v. 27 (only once) after anusvāra beside a (fifteen times) after a vowel, (six times) after anusvāra. ţ as is a rule voiced; exceptions are: Cittatta (Chitrakūṭa) iv. 14 and piaa (piṭaka) iii. 1. t is as frequently lost as it is voiced. Exceptions are: tatappaüdi (tatah-) iv. 5, vanadevatā i. 82 beside vaņadevadā iv. 14. sampāta v. 1 beside sampāda i. 68. probably all to be corrected. prati- is always changed into padi-. p is either retained or changed into v. It is lost only in two words, palāa (pralāpa) ii. 12 and ņiuņa (nipuņa) iv. 18. All the above consonants are never lost initially. Only p in punar is regularly lost.
- § 7. Voiced consonants:—Medially g and j are as a rule lost; exceptions are found only in compounds: gūḍhagabbha iv, 79, piajāṇa iv. 68 beside pariaṇa iv. 56. Other exceptions are bhagavaī iii. 27 beside bhaavadī i. 66, 108, pavvajami (pravrajāmi) i. 82 perhaps to be corrected into pavvajāmi. bāhadhea (bhāgadheya) i. 80 is perhaps by transfer of aspiration like bahiṇiā (bhaginī) (Sakuntalā iv. 80). d and b undergo no change. d is rarely lost. tālsīṇaṃ (tādṛśānāṃ) i. 96 beside tādiso (tādṛśaḥ) i. 80, pāava ii. 11 beside pādapa ii. 13, sāara iv. 14 beside sādara ii. 12,

- jai (yadi) i. 62, paam (padam) i. 108, roïssam (rodiṣyāmi) iv. 16, vaana (vadana) v. 27, hiaa (hṛdaya) i. 18, 60, ii. 5, 13, iv. 18, v. 5 etc. d is changed to r through the influence of a following r which passes into i (cf §1 above).
- § 8. Breathed aspirates:—Medial kh and th are regularly represented by h. Exceptions: mukhaa (mukhaka) iv. 19 and samgadhita (sangrathita) v. 25 are apparently corruptions. th is changed into dh in pudhavī (pṛthivī) v. 7; pudavī ii. 12 is to be corrected accordingly or is due to Dravidian influence. ch remains unchanged, ph does not occur medially, th occurs only in padanti (rt path.) ii. 5 which is to be corrected into padhanti.
- § 9. Voiced aspirates:—Medial gh is, without exception, turned into h. jh does not occur medially. dh remains unchanged. dh and bh are often changed into h. the following forms are peculiar: paüdi (prabhṛti) iv. 5, bādu- (bhrātṛ-) i. 64, bāaṇa (bhājana) iii. 30 and səvagga (saubhāgya) v. 21 all due, perhaps, to Dravidian influence; Bhāīraī (Bhāgīrathī) i. 12, 14, 108 beside Bhāīrahī iii. 27 may be a mistake.
- § 10. Nasals:—n and n are regularly represented by anusvāra. Besides in a number of cases doubling is indicated by the anusvāra sign, which is due to Dravidian influence: thus ama- (ārya), several times, beside ayya i. 34 (only once). umdisia (uddisya) ii. 28, uvamnāsa (upanyāsa) v. 23, damsana (darśana) ii. 5, 39, 46, 47. iii. 55, iv. 1, 36, 38, v. 21 beside dassana iii. 30, nimmänusa (nirmänusa) i. 82 and nimmidena (nirmitena) iv. 1, mamnu (manya) iii. 30, mahantha (mahārtha) v. 25 probably a misprint for mahamdha, Vammii (Valmiki) i. 82, ii. 2, 9, 10, 12, iv. 1, 5, v. 25 beside Vammī i. 108, v. 25, vi. 90, vimbhama (vibhrama) iv. 17 beside vibbhama v. 5. sahadhammaārinī (sahadharmacārinī) ii. 37, samumbhinna (samudbhinna) ii. 42 beside samubbhinna iv. 68, samvahā (sarvathā) iv. 40 beside savvahā iv. 68, v. 58. In vimmaya (vismaya) iv. 19 and ammi (asmi) i. 38 anusvara stands for h.

- The origin of this practice is due to Dravidian influence and the forms in Prakrit which show a double consonant or anusvāra followed by a single consonant optionally, as giṃthī or gitthī (grṣṭi), maṃjāra or majjāra (mārjāra), vaaṃsa or vaassa (vayasya) etc, might have lent support to it. n suffers no change but n is systematically changed into n. Where it is preserved, e.g. in niravasesa (niravasesa) i. 52, Nemiša (Naimiša) iii. 1, na iii. 55 beside niravasesa v. 15, nemisa iii. 1 etc. na iii. 55 etc., it is evidently through a mistake. m undergoes no change.
- § 11. Liquids:—r is represented by 1 only in a single word; calaņa (caraņa) i. 12. padiāra ii. 40 does not represent parihāra (as in the chāyā) but only pratikāra. 1 is frequently changed into 1 even in the beginning of words. ladā iii. 27, lajā iii. 30, Lava vi. 65, haļā iv. 1, 2, saaļaļoa vi, 90, Rāhavauļa vi. 90 and so on beside ladā iv. 2, lajjā ii. 12, Lava ii. 3, halā ii. 1, saalaloa vi. 93, Rāhavauļa i. 66. This is evidently due to Dravidian influence.
- § 12. Semivowels:—Initial y is without exception turned into j. Medially it is frequently dropped but is preserved in a few words which, however, show forms without y elsewhere: chāyā i. 16, piyasahī iv. 1 sahāya iv. 14, parihīyasi v. 49, vayassa iv. 2, Rāmāyaṇa iv. 1 beside chāā ii. 11, piasahī ii. 1, sahāa iii. 1, parihīasi v. 15, vaassa iv. 83, Rāmāaṇa ii. 5. Only Māyāvai iv. 14, viṃmaya iv. 19 and patthāvayanti iv. 18 do not show forms without y. Medial v. is generally retained but is dropped in the following words: diasa iii. 52, diaha iv. 74, besides divahe iv. 5; pasaa i. 48; padiniutta i. 86; paūtta iv. 79 beside pavutta iv. 2; bhaadā i. 96 beside bhavanto iv. 40; mahākaī- v. 25.
- § 13. Spirants:—s is retained in a few words which should be considered as a scribal mistake or as a case of pedantic spelling. cittasuddhi vi. 93, Nemisa iii. 1, sandesa i. 56 (i. 52), soaniā ii. 12 beside cārittasuddhi vi. 90, Nemisa iii. 1, sandisiadi i. 58, soaniā iii. 50. s is changed into h in diaha (divasa) iv. 74, 77 and divaha iv. 5. divaa iv. 5 is probably a mistake.

Aspirate:—As to padiāra ii. 40 see above § 11. neānam (snehānām) ii. 12, and acchāida (atyāhita) iv. 4 are exceptional, probably due to Dravidian influence. Visarga. duḥkha iii. 30, 36, iv. 14 beside dukka i. 52, ii. 12 and dukkha i. 64 is due to the influence of Sanskrit.

Conjunct Consonants.

- § 14. Gemination:—ekka i. 64, v. 77, bhuvanekka vi. 93 beside ea iii. 19; evva i. 48 etc. and evvam i. 62 etc. beside eva i. 82 and evam iv. 18, 5, 6, 7; vandanuvvaāro (vandanopacāra) ii. 13, sakkanomi (saknomi) iv. 40.
- § 15. Combinations of mutes with mutes:—Assimilation of the former to the latter is the rule. Peculiarities will be noticed. mumde (maugdhye) ii. 42 is probably to be corrected into mumdhe, where anusvāra indicates gemination.
- § 16. Mutes with nasals:—If the masal is the first member it remains unchanged, but if it is the second, it is assimilated to the mute. anni (agni) i. 48. jñ is always represented by nn (and never by ñn), but when it follows ā, it appears as n. tm in ātman appears 16 times as tt and 4 times as pp. nt never appears as nd, but in a single instance it is turned into nt: simantaa (simanta) i. 62.
- § 17. Mutes with semivowels:—It is always the semivowel that is assimilated to the mute, except in the case of dv in which the reverse is the case. mandabhāa (mandbhāgya) is found five times. ty, dy and dhy are palatalized: cc, jj and jjh. atyanta ii. 12 and acanta v. 21. beside accanta ii. 43 etc. are perhaps mistakes. acchāida (atyāhita) iv. 3, pacchāgada (pratyāgata) vi. 115 are exceptional. dy never=yy. In nimdiadi (mindyate) vi. 112 the dental is protected by the nasal. vijjhādhara (vidyādhara) is probably a mistake. dv is=vv, except in diuna (dviguna) iv. 16, dudia (dvitīya) iv. 74 and other forms of dvi. Ayojjā (Ayodhyā) i. 66 is probably a printer's mistake. py=vv in duvviņņavva (durvijāapya) v. 17. dīrgha is always dīha—rt is represented by tt: muhutta (muhūrta) i. 16, iv. 5, saṃkittaṇa

(sankirtana) i. 48, ii. 19; but in the forms of the rt. vrt- (vart-) tt is also frequently found: abhi-niuttomi (nirvartayāmi) i. 108 nivvattidavva (nirvartayitavya) ii. 37 nivvattida (nirvartita) iii. 27 but nioavatti (niyoagavarti) vi. 112, passaparivattini (-parivartini) iv. 10, vattadi (vartete) i. 12, vi. 63, vattāmi (varte. chāvā wrong) iii. 52, vattamāņo (vartamānah) iv. 5, aņuvattissadi (anuvartisyate) iv. 3—rth as tth: edavattham appears etadartham?) ii. 6, patthania (prarthaniya) ii. 12 paramattha (paramārtha) iii. 30, vi. 57, mahattha (mahārt'ia) v. 21, vi. 93. samattha (samartha) ii. 5, iv. 18. As to mahantha v. 25 see above §10. samatta (samartha) is probably to be corrected into samattha.—rdh is represented by ddh: saddha (sārtha) iii. 1. muddhā (mūrdhan) v. 64 dhanuddhara (dhanurdhara) vi. 93: but in the forms of the rt. vrdh- (vardh-), the combination is by ddh: vaddhasi (varddnase) ii. 1, vaddhiadi represented wrong), samvaddhia vrddhyate; (chāvā (samvarddhita) ii. 12.

§ 18. Mutes with spirants: -The spirant is as a rule assimilated to the mute. ks is always represented by kkh, except in vacchatthala (vakṣaḥsthala) ii. 34, iv. 68; thus lakkhī (laksmi) v. 5, and Lakkhana (Laksman) i. 6, 58, 82 etc. Cf. however. vikkevanikkeva (viksepaniksepa) iii. 1 besi**d**e (niksipta) iv 74, takkana (tatksana) iv. 19 beside khana (ksana) iv. 85 vilakkha (vilaksa) iv. 89. vijjai i. 84 is=vijayati and not viksate as in the chāyā. ts is variously represented: vaccha (vatsa) i. 6. etc. beside vacca (once i. 58), nibhacchati (nirbhartsavati) v. 104 samivaccara (samvatsara) v. 58, vaccalattana (vatsalatva) v. 27 and samussāhedi (samutsāhayati) i. 14. ps: accarāņam (apsarasām) iv. 79. sc: accariam (āscaryam) v. 67 and niccala (niscala) iv. 5, sk: dukkhara (duskara) v. 25, st and sth are both represented by tth which is also written tt or thth, but nistura i. 58 beside niththura ii. 12, Vasistha i. 82 beside Vasiththa vi. 90, susthu i. 108 beside sutthu i. 16 iii. 1 are evidently mistakes. sp: bappha (bāspa) v. 27 'tear'. st and sth are changed into tth, naddhi (nāsti) iv. 18 beside atthi i. 40, jalahara-ddhanida

- (-stanita) iii. 30, pattana (prasthāna) ii. 50 beside patthāna in the very next line, hatta (hasta) ii. 38 beside hattha iv. 14 are all to be corrected accordingly. In the forms of the rt. sthā, tth frequently appears instead of tth: tthida (sthita) iv. 2, 79, v. 5, avaththida (avasthita) v. 21, samthādum (samsthātum) i. 6, tthāna (sthāna) iii. 36 v. 25, 27, beside tthāna iv. 1, v. 3. Further kkambha (stambha) v. 5, beside tambha ii. 12 v. 60 and tthambha v. 21, timida (stimita) iii 55. sp is turned into pp: parisa (sparša) i. 14 ii. 12, pappanda (praspanda) v. 21, while sph is both pp. and pph: sampodaa (samsphotaka) iii. 1 and paripphuḍa (parisphuṭa) i. 32.
- § 19. Nasals with nasals:—nm:jamma ii. 46 and ummulia (unmulita) vi. 93.
- § 20. Nasals with semivowels:—The semivowel is assimilated to the nasal. ny (and nv) always changed into nn: as to mamnū iii. 30 see §10 above; similarly nimmānusa i. 82, nimmida iv. 1, sahadhammaārinī ii. 37; also Vammīi i. 82 etc. beside Vammīi i. 108 etc.
- § 21. Nasals with spirants:—sm:-sahassarassim (sahasrasmih) vi. 90 sm: gimma (grīsma) iii. 1. sm is represente by mh, which is also written hm: ahmāṇam (asmākam) v. 25; ahlāṇam (chāyā: asmākam) is a misprint; mhi (asmi) i. 82, ii. 82 iii. 1 etc. beside mmi i. 48 and mmi i. 16, iv. 42, 44, 50 etc. As to ammi i. 38 and vimmaya iv. 19 see obove, §10. hṇ and hm are retained as they are: aṇugahṇādi (anugṛhṇāti) i. 84 bahmaṇajādi (brāhmaṇajātiḥ) v. 112.
- § 22. Semivowels with semivowels:—ry is changed into yy: ayya (ārya) i. 34, ayyāhim (āryābhih) i. 56. Elsewhere ama is uniformly written, due to Dravidian influence. See above §10. sūra i. 68, iii. 1, iv. 77 should be connected with Skr. sūra and not with sūrya. rv, vy and vr are regularly represented by vv. samvahā iv. 40 beside savvahā (sarvathā) i. 48, etc.
- § 23. Semivowels with spirants:—The semivowel is without exception assimilated to the spirant and the result is always as medially and sinitially; dassania (darsaniya) iii. 30 hut every-

where else dams. (12 times); passa (pārśva) iv. 10; mahesi (maharsi) i. 82, iv. 33, v. 25, vi 90. Rāmaccāma (Ramaśyāma) ii. 1 beside ssāmala (śyāmala) v. 5 is peculiar, perhaps due to Dravidian influence. saya (sva) i. 103 beside saa i. 64 (i. 84 chāyā wrong).

ACCIDENCE.

Nouns.

- \$ 24. a-stems. Nom. sg. m. munijano (munijanah) iv. 19 n. kudūhalam (kutūhalam) i 14, sappam v. 62; sarpa is masc. in Sanskrit. Voc. sg. m. Kosalāhipa (Kosalādhipa) i. 34. Acc. sg. m. n. assamam (āsramam) iii. 55. pāņam ii. 12 is sg. not pl. as in chāyā, Instr. sg. m. dāvāņaļeņa (dāvānalena) v. 15. n. uttariena (uttariyena) iv. 64. Abl. sg. m. candado (candrat)i. 90. n. muhādo (mukhāt); here as well as in the case of several other Abl. forms the chaya is wrongly given as mukhatah etc.) iv. 79.  - § 40. Seven. sattame iv. 5.

- § 41. Ten. Dasaraha i. 96, Dasarahe v. 27.—dasamo v. 58.
- § 42. Hundred. sadahā sadahā (satadhā) v. 64.
- § 43. Thousand. sahassa (sahasra) vi. 93. sahassarassim (sahasrarasmih) vi. 90.

The Verb.

§ 44. The Present.—Indicative. The 3rd sg. ending is, as a rule, -di, only exceptionally -i: āacchaī iv. 74 beside gacchadi iii. 45, iccaī (icchati) iv. 87, bāheī iv. 79 beside bīhedi (bādhate) ii. 12, santavaī ii 19 beside santavadi (santapati) iii. 55, alamkareī iv. 75 beside alamkaredi (alamkaroti) ii. 13, dīsaī iv. 38, dīsaī i. 82 (dṛśyate) are the only examples quotable. The ending -de appears in an isolated form, pekkhade iv. 38 by the side of pekkhadi (prekṣate). The 2nd sg. ending is always -si, never -se, and the 1st sg. ending is -mi. In the pl. the 3rd pers. is very frequent. It always ends in -nti, never in -ndi. The 2nd pl. does not occur but one example of the 1st pl. is met with; gāamhma v. 25.

The change of the stem final to e is frequent, especially in the Imperative: anusaremi iii. 1, tuvaremi ii. 50, bāhedi ii. 12, iv. 79, bādhesi iii. 36, karemi i. 82 etc., alamkaredi ii. 13, iv. 75.

Imperative:—The 3rd sg. in-du is very common. 2nd sg:-a in gaccha iv. 10, bhaṇa iii. 50, muñca v. 62 and samassasa vi. 65; -āhi in bhaṇāhi ii. 45 bhayāhi iv. 83 suṇāhi iv. 5, v. 23; -ehi in ādēsehi i. 14, āṇavehi v. 15, kahehi i. 32, 42, ṇiivehi i. 12, parittāehi v. 15, bādhehi i. 58, viṇṇavehi i. 56, viṇodehi iv. 17. aṇṇesahi iv. 1 is perhaps to be corrected into -sehi. hohi is exceptional. suṇṇaṃtu iv. 40, vi. 90 is the only quotable form for the 3rd pl. upasappadu v. 43 is to be corrected into upassappantu. The other forms of the plural and 1st sg. do not occur.

Optative:-Very rare, bhave iv. 3, 38 bhaveditti! ii. 46.

Roots of the 1st class:—bhū: hodi iv. 18, 91. homi iii. 30 iv. 10, hohi i. 58, 64, v. 5 hodu iv. 38 anuhodi iv. 18, anubhavadi ii. 43, anubhavāmi iii. 30, pahavadi iv. 46, 56 vi. 90 pahavāmi

ii. 38 iii. 55, iii. 1, 30 bhavanti v. 27 (chaya abhūtām wrongly) pahavanti i. 12.—sthā: ciṭṭhanti v. 27, 67, aṇuciṭṭhāmi iv. 17, 40.—gam: gacchadi iii. 45, āacchai iv. 74. gaccha i. 68, 108, iv. 10.—tvar-: tuvaremi ii. 50, tuvaredu v. 1.—prekṣ: pekkhadi iv. 38, pekkhade iv. 38, pekkhade iv. 38, pekkhadi ii. 30, pekkhāmi ii. 45 iii. 55.—smṛ: sumarasi iii. 33. sumarāmi v. 58.—sṛ: aṇusaremi iii. 1.—tṛ: odarāmi i. 14.—mṛj-: pamajjāmi iii. 55.—ruh: adirohadi v. 64.—vṛdh: vaḍḍhasi ii. 1.—kram: adikkamāmi iv. 40.—hṛ; haranti ii. 5.—ram: ahiramadi i. 18.—labh; uvālambhāmi i. 58.—bādh: bādhesi iii. 36, bāhedi ii. 12, bāhei iv. 79, bādheyadi (?) ii. 42.—vṛt: vaṭṭadi i. 12, vaṭṭhadi vi. 63 (to be corrected), vaṭṭāmi (chāyā wrong) iii. 52.—vṛdh, vaḍḍhasi ii. 1.—tap. saṃtavai ii. 19, saṃtavadi iii. 55, saṃtapasi iv. 60. pavvajami i. 82 and paḍanti ii. 5. are in need of correction.

2nd class:—as: atthi i. 40: ammi i. 38, (m)mi i. 64, iv. 44 (with assimilation) beside mhi ii. 12, 34, iii. 30, v. 69 and hmi vi. 59 i. 4, vi. 63 with printer's devil; sonti (santi) i. 64.—yā: āanti i. 82.

4th class:-kup; kuppadu iv. 40.

5th class:—ci: ociņomi iii. 27.—śak: sakkaņomi iv. 40.—śru: suņāhi iv. 5, v. 23 suņnantu iv. 40, vi. 90.

6th class:—is: icchāmi iv. 1, iccaī iv. 87.—vis: upavisadi ii. 11, pavisadi iv. 8.—majj; nimajjāmi ii. 42. dhr: dharanti (dhriyante) vi. 57.

8th clase: -kr-; alamkaredi ii. 13, alamkaret. iv. 75, karemi i. 82, iii. 30, 55, iv. 46, karidu (karotu) v. 71 beside karodu vi. 93.

9th class:—grah: aņugahņādi i. 84.—jñā, jāņāsi ii. 25 iv. 8 (with a misprint) etc., jāņāmi ii. 42, iii. 30 etc. jāņanti iv. 6, 7, ņa āņāmi iv. 87.

10th class:—rūp; nirūvemi iii. 30.—bharts: nib- bhacchadi (-chedi) v. 104.—tark: takkemi ii. 6, v. 7.—dhr, dhārinti v. 25.—mrj: pamajjami (-jje-?) iii. 55.—pr: pāremi i. 6.—vij-; vijjaī i. 84 (vījayati, chāyā wrong).

Imperfect:—āsī iv. 79. mā rodī iv. 15. āsa iv. 16 looks like Perfect, but it is doubtful; the passage is corrupt.

§ 45. Future:—The ending of the 1st sg. is, as a rule, -m. -mi occurs only in a single form, parisussāmi vi. 15. The 3rd sg. ending is -di and the pl. ending, -nti, appear in a single instance, sambhāvīssanti iv. 40. Forms with the thematic -i- are very frequent. bhu: bhavissadi i. 50. gam: gamissam iv. 40, iv. 40. sthā: anuciţthissadi v. 25, anuciţthissam ii. 50. prekṣ: pekkhissadi iii. 55, pekkhissam iii. 30. sr: osarissam iv. 36 (chāyā incorrect). vrt: anuvaṭṭissadi iv. 3. srp. uvas: ppaissam ii. 13 upasappīssam iv. 40 (chāyā in both places incorrect).

caks: ācakkissadi iii. 1. rud: roissam iv. 16.

kup:-kuppissadi iv. 40. śram: vissamissam, i. 16.

prach: pucchissam v. 100, 112.

kr:-karaissam i. 108 (chāyā wrong), iv. 74.

bandh:-nibbandhaissam v. 5.

varn; nivvannaïssam iii. 30. laks: lakkhaïssam v. 7.

- § 46. Passive:—In addition to—īa-, -ia- is frequently found. They are both equally common. adikkhiadi vi. 80, āvamjiadi iii. 30, nimdiadi vi. 112, pucciadi (procyate) iv. 15, parihariasi iv. 72, bhaniadi ii. 5, vaddhiadi ii. 40 (c'ayā incorrect). -ia- is perhaps due to the contamination of the form -ia- and -ijja-. dīsai iv. 82, dīssai iv. 38, dīsasi iv. 89 are special forms.
- § 47. Causative:—p-causative: āṇavedi i. 98, āṇavedu v. 119, āṇavehi iv. 52, viṇṇvedi i. 62, viṇṇavemi i. 94, iv 48, viṇṇavidavvo i. 62, patthāvayanti iv. 48, saddāveanti ii. 42, saddāvaïssam ii. 13. The other forms are of the type adivāhedi iv. 5 and adivāhemi ii. 11, iv. 16.
- § 48. Denominative:—romancedi iii. 30. saccavanadi vi. 90. saddaveanti and saddavaissam quoted above.

Verbal Nouns.

§ 49. Present Participle:— anta: bhavanto iv. 40, samdisantena i 52 and the like. aniccaritti is corrupt. It is = anuca-

ranti acc. to chaya. Feminine form ends in -anti: akkhipanti ii. 13, pahavanti iv. 40 and so on.

-māņa: aņņesamāņassa iv. 77, dīsamāņa vi. 93 (passive), dharamāņe v. 27 vaļtamāņo iv. 5.

§ 50. Past Passive Participle:—da The d is dropped in a few forms: kampia i. 6, lalia iv, 18 beside lalidā v. 21, viņiggaa v. 7, samvaddhiā ii. 12. The vowel preceding the suffix is generally i short; but padigahīda v. 49 beside gahida ii. 50 and ņigahida i. 40. jāṇida v. 86 beside aṇṇāda v. 60 and aṇaṇuṇṇāda vi. 61, viṇṇāda iv. 38 and ahiṇṇāda iv. 66. Of the forms without i the following may be quoted: adikkanta iv. 68 etc. adimuttu iv. 79, kida i. 82 etc., gada i. 36 etc. gaddha (grathita) iii. 27, jāa i. 14, iii. 1 beside jāda ii. 12, vi. 15, tthida iv 2 etc., pariṇaddha v. 5, samārūdha v. 5.

-na: ahiṇṇa (bhid-) vi. 88, āsaṇṇa (sad) iv. 2 etc., pacchaṇṇa (chad) iii. 55 and paccaṇṇa iv. 79 (to be corrected), pasaṇṇa iv. 58 etc., and visaṇṇa v. 49 (sad), vicchiṇṇa (chid) iv. 7 and vitthiṇṇa (stṛ-) v. 117. puṇṇa (pr. or pūr) i. 90 etc.—diṇṇa (datta) v. 86; and mahapadiṇṇā iii. 27 is corrupt, perhaps the correct reading is maha padiṇṇāda and mae padiṇṇāda.

§ 51. Gerundives. davva: aņugahidavvā i. 56 and aņuggahidavvā i. 62, aņuciṭṭhidavvam iv. 64, jāṇidavvam iii. 30, hodavvam iv. 19, and so on.

-aṇīa: aṇukampanīā i. 96, dassaṇīo iii. 30, paḍipālaṇīā i. 96, vajjaṇīa iii. 41, soaṇīā ii. 12, iii. 50, with soaṇijjo (iii. 50) in the very next line, also silāhaṇijjāiṃ i. 78, sambharaṇīaṃ ii. 7. Note patthaṇiaṃ ii. 12 with short vowel. -a does not occur.

- § 52. Gerund. -ia is common: ajāņia iii. 30, aņuciṭṭhia iv. 42, uddisia iii. 27 beside uṃdisia ii. 28, gacchia v. 21, bhavia i. 12, bhamia (bhūtvā) ii. 12, uvālaṃbhia i. 38, suņia ii. 6, sumaria v. 15, 27, and so on. kadua and gadua are exceptional.
- § 53. Infinitives. -idum: apakkamidum iv. 74, uvekkhidum iv. 40, upahasidum iv. 87, odaridum i. 6, ogāhidum iv. 5, jāņidum iv. 1 and so on. kādum iii. 1 and samthādum i. 6 are the

only forms without union vowel. Note nivvasidum (nirvāsayitum) i. 60, visajjaïdum (visarjayitum) iii. 30 and adivāhidum (ativāhayitum) ii. 12.

§ 54. Formative suffixes. a (-ka): kumāraā v. 21, puttaā ii. 1, bhīrua iv. 60, mukhao iv. 19, sīmaņtaa i. 62, sangītaa iv. 1.

-ttaņa (-tva): adhaņņattaņam i. 40, avikaļattaņeņa vi. 101, nisamsattaņam ii. 43, dhaņnattaņam i. 58, mahiļattaņeņa i. 48, mahattaņeņa v. 15, 112.

-dā (tā): avissasaņīadā ii. 12, aņurāgadā ii. 27, 39, agoaradā iv. 38, aviņīdadā iv. 40, parāhīņadā iii. 30, lahudā v. 15.

-do (-tas): aggado i. 12 etc. ido i. 68 etc. guņado v. 9, dosado v. 9. In the chāyā the Abl. -ādo is several times confounded with this suffix: cf. dukkādo ii. 12, muhādo iv. 79, v. 64, visaādo i. 60, simhāsaņādo v. 62, hiaādo i. 60.

-hā (-thā): annahā iv. 91, jaha, jahā iv. 19, taha i. 14, etc. savvahā i. 82 etc. samvahā iv. 40.——(-dhā): sadahā (satadhā) v. 64.

-metta (-mātra): adimattam ii. 19, iii. 55; but uvālambhamettaeņa i. 40, sumaraņamettaeņa i. 62, suamettaeņa, in a corrupt passage, ii. 12. It appears that -metta is the form accepted by our author and the first word is to be corrected accordingly.

-dara, -tama (-tara, -tama): ahiadara ii. 12 etc. uccadara v. 21, gurudara v. 7 also guruara v. 7, loladara v. 21. -annatama v. 5—— -ttha: jettha i. 76, etc.

§ 55. Indeclinables.

ai occurs three times, once (iii. 36) in this form and twice (ii. 19, iv. 60) in its Skt. form, ayi. Bhāsa uses this word only once in all his dramas and Kālidāsa twice, once in his śakuntalā and another time in his Urvasi.

amho iii. 30. Not used by other dramatists: Bhāsa has amgho and Kālidāsa, hamho.

aho i. 40 and in five other places.

aviha v. 62. Bhāsa and Kālidāsa have avida. ādu (uta) v. 9, 102.

evva, sixteen times, and eva, only twice. jeva is found once, iv. 19, in a doubtful passage.

evvam, 28 times, and evam, only twice.

kila iv. 87, v. 25 and kila v. 25 (twice), 64.

kisa, seven times.

khu, always, never kkhu. This word occurs 8 times after a long vowel, 7 times after a short vowel (always either na or nu) and 6 times after anusvāra. The use of kkhu predominates over this form from the 7th or 8th century. hu which is common in Bhāsa and Kālidāsa, does not occur.

jeva, see above; not after anusvara.

ca v. 27 after anusvara and once again in the combination annacca iii. 1; elsewhere always a even after anusvāra.

tti (iti) after a vowel, several times, ti after anusvāra, four times (ii. 43, iv. 5, v. 117). ciraduḥkhasahāyam tti is, therefore, to be amended. cf. § 3.

dāṇiṃ, eleven times. dāṇi appears once (i. 82) in a passage which is corrupt. dāṇi appears only in Bhāsa. dāṇi in i. 82 is to be amended into daniṃ, cf. § 3.

nam (nanu) ii. 37, 47. Once nu (i. 48) is said in the chāyā to represent (incorrectly) nanu; elsewhere nu always represents nu cf. § 3.

bho is used several times in addressing persons.

vi (api): cf. § 3, but pi does not occur although it is frequent in the earlier dramas.

via (iva), but vva which appears in some of the later dramas does not occur.

haddhi. This form occurs in four places, repeated twice in three of the places. haddhi occurs in a single passage where it is also repeated. Bhāsa always uses the shorter form and among the later dramatists the longer form is decidedly more common. For our drama haddhi appears to be the proper form.

hala, thrice, once with cerebral 1.

hị hị occurs once (v. 21) in combination with bho. Bhāsa has always hi hi without bho. Kālidāsa uses both forms while Harṣa has always hi hị bho.

hā and he: each once (i. 34 and iv. 85).

ÜBER DIE ÄLTESTEN INDISCHEN METRIKER UND IHR WERK

Von

Hermann Jacobi

1

Die Metrik (chandas) ist eins der sechs Vedängas, das vorletzte in der ersten Aufzählung derselben in der Mundaka Upanişad I, 1,5; als solches galt von je das Chandahsütra des Pingala. Es liegt uns in zwei fast identischen Rezensionen vor, die Weberals die des Rg und Yajus bezeichnet hat. Sagenhaft ist, was die Tradition von Pingala berichtet. Er soll nümlich, wie Patanjali, ein Näga gewesen und von einem Makara vershlungen worden sein?

ijber das Alter des Chandahsütra lässt sich nichts mit (lārgya², der Bestimmtheit ausmachen. Verfasser des Sāmaparišişta über vedische Metrik, nennt unter den Quellen für dies sein Werkehen den Pingala; dessen Chandahsütra galt also in den Ausläusern der vedischen Wissenschaft als Autorität, wie es bei einem Vedanga auch nicht, anders zu erwarten ist. Die chronologisch einigermassen datierbare Erwähnung Pingala's findet sich im Bhāṣya zum Mīmāmsāsūtra I, 1, 5 (S. 16) in dem langen Zitat aus dem Vrttikara (Upavarşa 2., 3. oder 4. Jahrhundert n. Chr.). Dort heisst es: "Niemand ausser Pingala oder einem, der dessen Werk anerkennt, warde unter m (makara) einen dreisilbigen Versfusz (trika) aus lauter Lüngen (sarvaguru) verstehn." Die Beschreibung der Metra durch die Buchstaben: m, y, r, s, t, j, bh, n, (l, g) galt also schon früh als charakteristisch für Pingala's System.

2. Pancatantra, l'ūrnabhadra's Rezension, II, 29.

3. Weber, S. 158.

^{1.} Indische Studien VIII, S. 162. Dies für unsere Kenntnis der indischen Metrik grundlegende Werk ist hier überall gemeint, wo bei dem Namen Weber' nur die Seitenzahl angegeben wird.

Weniger künstlich und vielleicht älter ist die Methode, die Stellen der Zeile anzugeben, wo lange Silben Stehn, wie es noch im Srutabodha geschieht. Bharata kennt beide Methoden, woraus sich ergibt, dasz das Nātyasāstra jünger als Pingala's Werk ist. Seine Autorität stand also schon in den ersten Jahrhunderten unserer Zeitrechnung fest; wieviel höher sie hinaufreicht, lässt sich nicht bestimmen; doch kann man ein beträchtliches Alter für dieselbe wahrscheinlich machen, obsehon zunächst der Anschein dagegen zu sprechen scheint.

So könnte man betonen, dasz Pingala in dem Vedanga über Metrik die weltliche Metrik viel eingehender behandelt als die vedische. Jedoch bietet das Vedanga Grammatik ein Analogon, insofern Pānini zur Grundlage derselben die bhāsā macht, die Sprach-erscheinungen aber nur als Ausnahmen zu vedischen seinen Regeln behandelt. Man könnte sich vielleicht als ein Argument für ein verhältnismässig junges Alter Pingala's darauf berufen, dasz er eine so grosze Zahl, weit über hundert, von 'kunsltichen' Sanskrit Metra, d. h. solchen lehrt, in denen nicht nur die Zahl der Silben, sondern auch deren Quantität unveränderheh festgesetzt ist. Es musz also zu seiner Zeit eine hochentwickelte eigenartige Poesie (nach dem Namen der Versmasze zu schlieszen, lyrisch-erotischen Charakters) bei den Sanskrit Es ist jedoch nicht abzusehn, Redenden bestanden haben. weshalb nicht sehon fruhe selbst die sistas zarteren Empfindungen Ausdruck verliehen haben sollten, wozu ihnen die vedischen Metra schwerlich als geeignete Vehikel erscheinen das F**u**r den mochten. fr**u**hen Gebrauch 'künstlicher' Metra zeugt übrigens Patanjali. Wie nämlich Kielhorn¹ gezeigt hat, sind unter jenes Zitaten im Mahābhāsya eine Anzahl Strophen in 'kunstiichen' Metren, und zwar auszer Upajāti une Sālinī, namentlich solche von einfachem Rhythmus, nämlich die jambischen, trochäischen und spondeischen Dimeter: Pramani, Samānī und Vidyunmālā, ferner die anapdstischen und daktyli-

schen Tetrameter Totaka un dDodhaka. In diesen 'künstlichen' Versen waren grammatische Lehrsätze abgefasst und discutiert. ebenso wie später gerade d'e abstraktesten Disziplinen sich ähnlich gebauter Strophen (Bhujangaprayata, Sragvini) mit Vorliebe bediepen. Eine besonders kunstliche Strophe der Art zitiert Patanjali zu VIII, 2, 55, sie hat das Schema - - - - i u u u u u u u ll Es setzt eine lange literarishe jibung voraus um die Sprache so geschmeidig zu machen, dasz selbst abstrakte Tiemata in diesem künstlichen Versmasz behandelt werden konnten, oder gar in der Vidyunmala, einer Strophe von 32 langen Silben. Zu demselben Schlusz führt die sehr häufige Verwendung der Arva zu Kārikās im Mahābhāsya. Die Āryā (Gāthā) war das leitende Metrum im Prakrit, von dort drang sie in das Samskrit ein und erwarb sich solche Gunst, dasz sie in wissenschaftlichen Werken mit dem Śloka erfolgreich concurrieren konnte. Die Grammatiker deren Verse Patanjali zitiert, durften zumeist im 3 ten Jahrhundert vor Chr. gelebt haben. Ihnen ging die Entwicklung der Kunstpoesie voraus, was wohl einen beträchtlichen Zeitraum in Anspruch nahm, araus haben sich nur dürftige Spuren erhalten. wozu zwei Praharsini Strophen, eine Pramani- und eine Upajātizeile gehören, die Patanjali zu II, 2, 34, VIII, 3, 87 zitiert.

Vorstehende Erörterung über das Alter der künstlichen Metra war hier nötig, um zu zeigen, das Pingala wohl dem 3. oder 4. Jahrhundert v. Chr. angehört haben kann.

Pingala nemit mehrere Vorganger in der weltlichen Metrik: Kāsyape, Saitava, Rāta und Māṇḍavya; aber siene Angaben über deren Lehren sind nicht derart, dasz man aus ihnen einen Einblick in den damaligen Stand der weltlichen Metrik gewinnen könnte. Aber wir können aus seiner Behandlung des Themas den Fortschritt erkennen, den die Disziplin ihm verdankt. Wir gedachten bereits oben des seiner Erfindung zugeschriebenen Kunstgriffes, die Versfüsze (trika) durch Buchstaben zu bezeichnen, wodurch sieh die metrischen Schemata auf algebraische Formeln bringen lassen. Die Erklärung dieses Kunstgriffes bildet die Einleitung

zu seinem Lehrbuch wie zu Pāṇini's Grammatik die Sivasūtras, mit denen sie sich auch hinsichtlich ihrer praktischen Bedeutung für die Disziplin vergleichen lassen. Auch darin erscheint Pāṇini's Aṣṭādhyāyī vorbildlich für Pingala, dasz sein Chandaḥsūtra ebenfalls aus acht Adhyāyas besteht. Deshalb hat die Bemerkung Ṣadgurusiṣya's in seinem 1184 n. Chr. verfassten Kommentar zur Rganukramaṇī, dasz er Pāṇinīyānuja sei', einen guten Sinn, wenn sie auch nicht wörtlich zu nehmen sein wird.

Auch sonst greift Pingala zu künstlichen Mitteln, um verwickelte Erscheinungen übersichtlicher darzustellen. Deutlich zeigt sich dies bei der Lehre vom Sloka. Darin geht er nämlich (5, 9) vom Vaktra aus, einer seltenen Strophe,² in der auch die geraden Pädas wie die ungraden des Sloka gebildet sind.

Dasz er diese Darstellungsweise, die sich auch bei den übrigen Metrikern wiederfindet, nachträglich eingeführt hat, lässt sich noch aus seinen sütras erkennen. Denn bevor er angibt, dasz im Vaktra die Silben 5-7 einen Bacchins (y) bilden, lehrt er, dasz von den Silben 2-4 der Anapäst (s) und Tribrachys (n) ausgeschlossen sind, und in den geraden Pädas auszerdem der Amphimacer (r). Letztere Regel hat aber nur für den echten Śloka Sinn, weil durch sie der Jambus vor dem Dijambus ausgeschlossen, also die Aufeinanderfolge dreier Jamben vermieden werden sollte. Man sieht nicht ein, weshalb vor dem Antispast bez. Epitritus primus (*--*) ein Jambus in den ungraden Pädas des Vaktra zulässig, aber in den durchaus gleichen geraden Pädas verboten sein sollte. Die Verwirrung entstand offenbar dadurch, dasz mit ülteren sütras, die den echten Śloka lehrten, solche über

1. Weber, S. 159f.

^{2.} tiber ihre Verwendung in der Akhyāyikā siehe Bhāmaha I, 26, Dandin I, 26. Ich kenne nur vier ältere Vorkom-

das Vaktra verbunden wurden, nicht blos im Aufang, sondern auch im Fortgang der Darstellung (z. B. 14 und 17). Dadurch ist Pingala's Lehre vom Sloka (welchen Namen er nicht gebraucht), sehr confus, und bei den späteren Metrikern ist sie nicht wesentlich besser. Wahrscheinlich hatten die Kunstdichter auch den Sloka zu variieren versucht und darum das Vaktra erfunden, dies hat dann Pingala in seine Darstellung des Sloka eingeflochten, so wenig auch die wirkliche Bedeutung des Vaktra der ihm beigelegten theoretischen auf die Dauer entsprochen hat. Es scheint übrigens Saitava, eine der vedischen Anuştubh ähnliche Strophe, in der alle Pādas auf Dijambus bez. Paon secundus (*-**) ausgehen, seiner Lehre vom Sloka zugrunde gelegt zu haben; dem gegenüber wäre Pingala's Ausgehn vom Vaktra eine Neuerung.

Ein kunstliches Prinzip, das Pingala eingeführt zu haben scheint, ist ferner die Messung gewisser Metra nach der Morenzahl. Dadurch bringt er verschiedene Metra, wie die Vaitäliya-Arten und die Mäträsamakas, die manigfaltigen Ursprungs sind, ohne von Anfang an etwas mit der Morenzahl zu tun gehabt zu haben, in einer Klasse unter. Wie unberechtigt dies Prinzip ist, zeigt sich deutlich darin, dasz nun die unveranderlichen Vaitäliyas von denen getrennt werden mussten, in denen eine lange Silbe gleich zwei kurzen, und umgekehrt gelten.

Pingala's Bestreben, die bunte Masse der verschiedenartigsten Versmasze in ein System zu bringen und dadurch übersichtlich zu machen, hat offenbar dem Chandahsütra zu seinem hohen Ansehn verholfen. Dessen System ist in seinen Grundzügen auch bei den späteren Metrikern in Geltung geblieben, wenn es auch im Einzelnen nicht an Verbesserungsversuchen gefehlt hat.

Pingala teilt die Metra folgendermaszen ein:

1. Pingala erwähnt diese Strophe bei den Vipulas. Diese Vipula ist einige Male im Mahabharata belegt, aber niemals in beiden Halbversen zugleich, was doch das Wesentliche bei Saitava's Strophe ist.

- I Die auf ginas von 4 Moren aufgebauten Strophen, in denen je zwei Pādas zu einem Halbvers verwachsen sind: die verschiedenen Aryā-Arten.
- II Die Metra, in denen die Anzahl der Moren bestimmt ist.
- (I und II bilden den In'ialt des 4. Ad'iyāya. Die Späteren nennen die zu I und II gehörigen Versmasse jāti¹, und zwar die unter I Ganacchandas, und die unter II Mātrāchandas.
- III vrttam. Pingala gibt keine Definition, sondern geht sofort zur Einteilung der vrttas über:
 - a. samam (samavrtta) von vier gleichen Pādas;
 - b. ardhasamam (ardhasamavṛtta) von zwei gleichen Vershälften, in denen aber die Pādas ungleich sind;
 - visamam (visamavrtta), alle Pādas sind ungleich. Hierhin werden alle Metra gestellt, die in a. und b. nicht unter zubringen sind. In diese Klasse stellt Pingala auch den Śloka (Vaktram). Hemacandra ist ihm darin gefolgt, während Kedarabhatta im Vrttaratnakara ihn zwischen den Vaitālīva-Arten und den Mātrāsamakas einschiebt. Die Schwierigkeit liegt darin, dasz in den jeder Pāda sein bestimmtes Schema haben sollte, und das trifft eben auf den Sloka nicht zu. Wahrscheinlich waren es Bedenken ähnlicher Art, die Pingala bestimmten, vor der Lehre vom Sloka (Vaktra) in V, 9 ff. die regulären Anuştubh-vrttas (in V, 6-8) zu behandeln, nämlich die trochäische Samānī, die jambische Pramānī und das Vitānam, unter welchem Namen die übrigen Anustubli-vrttas zusammengefasst sein sollen2. Diese kommen dadurch in den Anfang des Abschnittes über die vrttas (III) zu stehen, wihrend ihre richtige Stelle im 6. Adhyāya ware. Dort lehrt Pingala folgerichtig die Pramani und Samani nicht, sondern nur Citrapada.
- 1. padyam catuspadam tac ca vrttam jātir iti dvidhā. Zitat bei Halāyudha zu, V, 1, Hemacandra zu I, 11.

2. Halāyudha ad V, 8, Hemacandra ad II, 82.

Vidyunmālā und Māṇavakākrīditakam. Aber eigentlich sollte er auch diese nicht lehren, da sie schon im
Vitānam einbegriffen sind. Dies scheint der Sinn einer
Bemerkung des Svetapata² zu sein, worüber Halāyudha
zu V, 8 eine Strophe beibringt. Aber trotz dieser
Inconsequenz ist an der Echtheit von V, 6-8 nicht zu
zweifeln, da ja der spätere Abschnitt hinsichtlich der
Samānī und Pramānī darauf Rücksicht nimmt. Wahrscheinlich war in Pingala's Quellen der Sammelname
Vitānam für andere als die beiden genannten Metra
üblich; da aber zu seiner Zeit einige Vitāna-Strophen
schon besondere Namen bekommen hatten, so konnte er
sie im 6. Adlıyāya je an ihrer Stelle aufführen.

Dagegen ist der Abschnitt VIII, 2-19 sicher ein späterer Zusatz, wie Weber, S. 184 und 414 gezeigt hat. Er fehlt tats ichlich in allen Mss. der Rg-, und einigen der Yajus-Rezension. Zwar ist zu diesem Abschnitt Haläyudha's Commentar vorhanden, aber seine Echtheit ist zweifelhaft, vgl. Weber, S. 414 f. Da Bharata und Varähamihira die meisten der in VIII gelehrten 19 Metra nicht kennen, musz der betreffende Abschnitt nach dem 6. Jahrhundert zugefügt sein. Hemacandra aber hat ihn wohl gekannt, da er alle 19 Metra lehrt, wenn auch 6 mit andern Namen.³

- 1. In dieser Reihenfolge in der Yajus-Rezension. Weber, S. 36 f.
- 2. Derselbe kritisiert auch nach Halāyudha I, 22 Pingala's Lehre von der syllaba anceps am Pādaschlusz, und soll auch (vgl. Weber, S. 222 note) mit Māndavya und andern die Lehre von den Zäsuren verworfen haben.
- 3. Im Vrttaratnākara (Commentar Pancikā) finden sich von diese 19 Metra nur 9. Dies ist um so bemerkenswerter, als auch diese kürzeste Rezension des arg interpolierten Werkes durchweg mehr Metra in jeder Klasse aufzählt als Pingala. Wenn also der Redactor den betreffenden Abschnitt im 8. Adhyāya gekannt haben sollte, so müsste er ihn als unecht angesehn und darum ignoriert haben.

Der Rest des 8. Adhyāya ist zweifellos echt. Er handelt über den Prastāra, die systematische Anordung der Metra, and die Stelle eines jeden in demselben. Solche algebraische Spekulationen haben von je den indischen Geist lebhaft interessiert, und wir haben keinen Grund zu bezweifeln, dasz sie auch schon Pingala beschäftigt haben Derselbe Gegenstand wird auch von Bharata im 14. Adhyāya behandelt, teils übereinstimmend mit Pingala V, 3-5, VIII, 20 ff., teils daran anklingend.

2

Die zweitelteste Quelle für unsere Kenntnis der Indischen Metrik ist das Nätyasästra Bharata's. Für ihn ist die Metrik nicht Selbstzweck, sondern er behandelt die Metren insofern sie im Drama Verwendung finden. Er widmet der Metrik den ganzen 15. Adhyāya: Chandovrttividhi, und den 32ten: Dhruvādhyāya, zum Teil. Die im 15. Adhyāya gelehrten Metra sollen in Dramen und andern Dichtungen verwendet werden, die im 32ten sind Gesangsstrophen.

Betrachten wir zuerst Bharata's Metrik im 15. Adhvāva. Wie oben bereits bemerkt, gibt er bei Beschreibung der samavrttas die Stellen im Verse an, wo lange (bez. kurze) Silben stehen: aber bei den übrigen vrttas bedient er sich der trikas, die charakteristisch für Pingala's System sind. Letzteres hat darum Bharata zweifelsohne gekannt; die allgemeinen Grundzüge desselben befolgt er durchaus in der Einteilung und Darstellung der Metra. Aber im Einzelnen sind Abweichungen bedeutend und bedeutsam. So lehrt Pingala 73 samavrttas, Bharata dagegen nur 49, und zudem fehlen von diesen 10 bei Pingala. Von den übereinstimmenden Metren haben viele andere Namen, nicht blos die selteren, sondern auch ganz gewöhnliche. Er gibt den Namen Hariniplutam für Drutavilambitam, Aprameyam für Bhujangaprayatam, Nandimukhi für Malini, sridhara für Mandakranta. Vilambitagati für Prthvi. Bharata schöpfte also nicht unmittelbar aus Pingala, sondern traf seine Auswahl aus dem was zu seiner Zeit (offenbar lange nach Pingala) in den Schulen der Metriker gelehrt wurde. Er selbst sagt darüber

XV, 144 f. ¹ "Es gibt noch andere Metra, die hier von Gelehrten beschrieben worden sind; ich habe sie nicht genannt, weil sie nicht zur Schönheit beitragen. Alle anderen soll man als Gesangstrophen benutzen Das Genauere über sie werde ich im Dhruvāvidhāna lehren." Man beachte, dasz das Gesagte nur von den vṛttas, zu denen auch der Sloka (XV, 116 ff.), aber nicht die Āryā-Ārten (XV, 146) gehören, Geltung hat. Diejenigen vṛttas, welche Bharata im 15. Adhyāya lehrt—also musz man wohl schlieszen—sollen nicht als Gesangstrophen verwendet werden, ausgenommen sind Rathoddhatā und Pramitākṣarā (XXXII, 282. 291). Daraus folgt, dasz dergleichen, in den Dramen vorkommende Strophen nicht gesun gen, sondern in Rezitativ (mit abhinaya) vorgetragen wurden.

Wir wenden uns nun zur Metrik im Dhruvādhyāya (XXXII). Zwar ist das technische Detail über die Dhuvās in der dortigen Darstelleng ohne erklärenden Commentar uns annoch unverständlich; aber es ist zweifellos, dasz es sich dabei um Verwendung der betreffenden Strophen zum Gesang handelt. Es finden sich nämlich darauf hinweisende Ausdrücke wie folgende: gīte 162, gītakavidhau 175, gītakavidhāne 196. 204, gītakabandhe 213. Dafür spricht auch, dasz die Beispiele nicht in Samskrit wie in XV, sondern in Prakrit² abgefasst sind. Diese Gesangstrophen waren nicht Bestandteile des Dramas selbst, sondern gehörten zu dem Conzert, das dessen Aufführung begleitete.

Die Metrik der Gesangstrophen war wohl Gegenstand des Gändharvaveda des Bharata und ist von der im Chandaḥśāstra gelehrten grundsätziich verschieden. Zwischen beiden Arten der Metrik besteht auch ein Unterschied in der Behandlung der Metra. Pingala beginnt die Aufzählung und Beschreibung der samavrtta mit der Gäyatrī-Klasse, deren erstes Metrum Tanuma-

santy anyāny api vṛtlāni, yāny uktānī 'ha panditaih | na ca tāni mayo 'ktāni; na sobhā m janayanti hi||.
 yāny atah param atra syur, gītakais tāni yojayet; |
 Dhruvāvidhāne vyākhyāsye teṣām caiva vikalpanam.||
 ijber dasselbe habe ich gehandelt in Bhavisattakaha S. 84 ff.

dhyā ist, und geht dann die übrigen Klassen bis zu den 26silbigen durch; ebenso verfährt Bharata im 15. Adhyāya. Im
32. Adhyāya beginnt dagegen die Aufzählung mit den einsilbigen
und schreitet so fort bis zu den 13-silbigen. Die 5 Klassen: Ukthā,
Atyukthā, Madhyā,¹ Pratisthā, und Supratisthā, die doch nur
theoretische Bedeutung hatten, fehlen also in der ursprünglichen
eigentlichen Metrik, die durch Pingala und Bharata's 15. Adhyāya
vertreten ist. Die späteren Metriker machen aber keinen
Unterschied zwischen beiden Arten von Metrik sondern führen
in ihrer Aufzählung der samavṛttas alle Metra auf, deren sie
habhaft werden konnten, gleic'ngültig, welchen Ursprungs sie
sein mochten; sie beginnen daher mit den 5 bei Pinga'a fehlenden
Klassen, so in Hemacandra's Chandonusīsana, im Vṛttaratnākara und Prākṛta- Pingala.²

Nach den Dhruvās behandelt Bharata noch andere Klassen von Gesangstrophen, für deren Verständnis die Veröffentlichung von Abhinavagupta's Commentar abzuwarten ist. Vorläufig wage ich nur mit allem Vorbehalt die Vermutung zu äuszern, dasz die Prakrit Metrik, wie sie in Hemacandra's Chandonuśāsana Adhyāya 4 vorliegt, sich vielleicht auf der von Bharata gebotenen Grundlage entwickelt hat.

Im Anschlusz an die älteren Metriker sei noch der im 6. Jahrhundert n. Chr. lebende Astronom Varähamihira erwähnt. In dem 104. Adhyāya (grahagocara) der Brhat-Sam'hitā gibt er die betreffenden astrologischen Regeln in 64 Strophen von verschiedenem Metrum, wobei in jeder Strophe ihr Name genannt wird; es sind also Musterverse für diejenigen Metra, welche nach seiner Meinung ein Pandit kennen sollte, nämlich 50 samavrttas,

^{1.} Der Name der 3. Klasse madhyā, die Mittelste, scheint entstanden zu sein, als diese 5 Klassen noch eine Einheit für sich bildeten.

^{2.} Es sei aber erwähnt, das Ksemendra, dessen Suvrttatilaka praktischen zwecken dient, seine Darstellung der Metra mit Tanumadhyā beginnt.

4 ardhasamavṛttas und die Āryā. Diese Metra erklärt Bhaṭṭot-pala, der in den 60er Jahren des 10ten Jahrhunderts schrieb, in seinem Commentar mit Berufung auf einen ungenannten Ācārya; dessen Regeln sind in dem zu lehrenden Metrum abgefasst, und zwar benutzt er dazu bei den samavṛttas nicht die ganze Strophe, wie es Bharata in XXXII tut, sondern nur einen Pāda, was eben bei Verwendung der trikas möglich ist. So finden wir hierschon dieselbe Methode, die in spateren Handbüchern wie Vṛttaratnākara und Chandomanjarī befolgt wird.

DER EINFLUSS DER VOLKSPRACHE AUF DIE ZISCHLAUTE IM ZEITALTER DER ENTSTEHUNG DES RGVEDA

Von Prof. I. Scheftelowitz (Köln).

Bereits zur Zeit der Entstehung der Hymnen des Reveda waren in der damaligen Volksprache der Inder die Zischlaute s, s und s in der Aussprache kaum unterschieden. Nur so ist es zu verstehen, dass in Rgv. zuweilen 1.) s für urarisch s und s steht, 2.) s hinter i, u für s steht.

In denjenigen Fällen, in denen. Rv. s sich für arisch s findet, ist es unter Einfluss eines in der folgenden Silbe desselben Wortes stehenden s, s entstanden, wie bei svasura (=aw. xvasura), smasru 'Bart' (a irisch smech 'kinn'), suska, susyati (=aw. huška, haoš)', slaksna (AV.) 'schlüpfrig, glatt': aisl. slakr 'schlaff', nd. slakk 'dicke, weiche Masse' (zum Suffix vgl. tiksna 'scharf': ejate).

- I. Beispiele, in denen Rgv. s für ar. s steht:-
- (1) Rgv. pāmsurá 'staubig' pāmsú (Av.) m. 'Staub': aw. pa.snu 'Staub'. In MBh. (Kalkuttaer Ed.) liegt die Schreibung pāmsu vor, die aber als sekundar anzuschen ist z. B. X 9, 14: sa hato grasate pāmsūn.
- (2) Rgv. busá n. 'das Trübe, trübes Wetter' (nur X 27, 24), nach den Lexicographen 'Abfall, Schlacke dicke Schicht der geronnenen Milch', busā 'trockener kuhdunger' (vgl. z. B. Vaijayantī 128 Z. 128; 134, Z. 283; 91 Z. 193), mi. busu, ni. buhu (Grierson. ZDMG. 50, 17). busa ist unmöglich mit Bartholomæ ZDMG. 50, 712 auf urind. brša zurück zu führen und zu

⁽¹⁾ Vgl. hierüber Wackernagel, Altind. Grammatik I 197, Osthoff, Perf. 493 f., Hirt, B. B. 24, 230, Bloomfield J. A. O. S. 13, 118, Hübschmann, Arm. Gram. 476, 491. RV. sasvat 'wiederholt, jeder' ist schwerlich aus sasvat entstanden, sondern gehört zu arm. sos-k 'einfach, allein, gewöhnlich'. Demnach ist das in sasvat ursprünglich.

Pamir bis, büs 'Dunst, Nebel' zu stellen (vg. Johansson KZ. 36 356 f.), sondern geht auf urind. busa zurück: russ, bus 'Staubregen', za-buset' 'trüb, dunkel werden', busoret' 'grau, dunkel werden', busol 'schimmel, schlamm'. Zum Bedeutungswandel vgl. aslav. täca 'Regenwolke', russ. tuca: serb. tüska 'Schlacke, Treber, russ. tusknut' 'trübe werden', oder slov. kaliti se 'trüb werden: lat caligo 'Nebel'.

- (3) Rgv, sūci 'Nadel', prak. sūi, pali sūci, neben. ai. sūka 'Granne des Getreides, Stachel eines Insekts', aw. sūkā 'Nadel' Hierzu auch ai. sūkṣma neben sūkṣma 'fein, genau'. Uṇādisūtra, 4. 93 leitet sūcī fülschlich von. sīv+suff. ca ab.
- (4) Rgv. srutí I 46, 11 wofur das Kasmir-Ms. srúti liest, was einen besseren Sinn gibt: ádarsi ví srutir diváh 'offenbart hat sich des Himmels Segen', vgl. Rgv. II 2, 7.

Ebenso findet sich in anderen vedischen Texten s für ar. s.

(5) Késara (VS.) 'Haar', aus késara: Rgv. késa 'Haar', kesin 'lang haarig, haarig', alb. k'ee (idg. *koikō) 'schere', lit. káiszau 'schabe', apkaiszti 'abschaben' (Geitler, Lit. Stud 77).¹ Hierher gehört auch ai. kisala, kisalaya 'Schössling, Blattknospe' (Vgl. auch Vaijayantī, p. 46). Kālidāsa Megh. 21: kesara 'Staubfaden' ist wohl sekundüre Schreibweise. Begrifflich vgl. arv. varəsa 'Haar': ai. valsa 'schössling, Zweig'.

Bloomfield (J. A. O. S. 13) und Walde (Lat. Et. Wtb.) nehmen an, dass ai. keśara mit. lat. cæsaries 'Haupthaar' verwandt' sei, doch idg. *kaisar hätte in Lat. zu *caerar werden müssen (vgl. lat. aurora, soror). Lat. caesaries geht auf, vorlat. *kaidh-s-zurück: ags. hád 'Haar', germ. *haid, ndd, fries. hēde 'Werg, Hede', lit. sukidēs 'zerzaust', daneben idg. *kidh-tōn *kiddhōn, kizdhōn=germ. hizdōn, ndl. herde 'Haar, Werg', ags. heorde, engl. hards, hurds (Sievers, zum Ags. Voc. 24f., Murray V

⁽¹⁾ Zum Bedeutungswandel vgl. aslav. kosa 'Haar': lit. kasyti 'gelinde Kratzen', gr. kséő 'schabe'; čech. škutina 'Haar-schopf': lit. skutu 'Kratze, schabe.'

- 89, Trautmann, Germ. Lautges. 33). Bisher wurde angenommen dass in Lat. caesaries das s ausnahmsweise ebenso erhalten geblieben würe wie in lat. miser. Doch ist das s in letzterem Wort nicht ursprünglich (vgl. WZKM XXI 127).
- 6. Musala m. (AV., TS.) 'Stössel, Kolben'; die in Sivapur. Adhy. 10. 53, sich findende Lesart musala kann. sekundär sein: lit. muszikas 'schlägel', muszù 'schlage', lat. mucro 'scharfe Spitze.'
- 7. Rásnā (V S.) 'Gurt': Rgv. rasanā 'Strick, Zügel,' np, rāsān 'Strick, Zügel', arm. Lehnw. erasan.

- (9) Suka (AV. I. 22, 4) fur suka (Rgv. I, 50, 12 und Paippal).
 - II. Beispiele, in denen Rgv. s fúr ar. s steht.
- (10) Rgv. rbisa 'Schlund, Erdspalte', urind. *rvīşa (zur Bildung vgl. rjīşa, purişa: uṣṇiṣa), lit. ùrwa 'Loch in der Erde, poln. rów 'Graben', preuss. rawys.
- (11) Rgv. kīstá. 'Sänger' (Sāyaṇa: udgātṛ): aw. kaēš 'lehren', lat. quaero, quaestor, quaestio. Zur Bedeutung vgl. aw. sa.h 'lehren': ai śaṃs 'singen'; np āhäng, hanj 'Belehrung, Rat', phl. frahaxt 'ausgebildet', ar. W. *sangh: got. saggws 'Sang', ahd. sang, got siggwan; lit. bóti 'fragen', gr. φωνή 'Stimme'.
- (12) ved. barsva (VS. 25, 1, Kāth. 25, 9) 'Zahnfleisch', neben varsva (nach Mahidhara = danta-pitha), idg. *volsvo : gr. otlon 'Zahnfleisch'. Betreffs der Behandlung von urgriech. ls, vgl. F. Sommer KZ. 32, 386 ff, Brugmann IF. 11, 208 A. Anders über otlon Schwytzer KZ. 57.
- (13) Rgv bisa (wofur viele Mss. visa schreiben) Wurzelschoss' (in bisa-khá, AV. bisa), mi. bisu, ni. bihu (Grierson ZDMG. 50, 17), urind. visa: lit. wystù, 'sich fortpflanzen',

⁽²⁾ Hier ist das k von der Vollstusen form *kais aufdie Schwundenstuse *cis übertragen, vgl. gītha.

waisind 'wachsen machen', wassius 'Frucht'. Hierzu auch ai, bişyati 'hervorbrechen, wachsen' (bhedana-karman, vṛddhi-karman), nur in Nir. 2. 24 überliefert.

- (14) Rgv. bṛṣaya etwa 'Zauberer' und Bezeichnung eines Dämons urind. vṛṣaya, asl. vlchv 'Wahrsager', vlšība Zauberei', russ. volchit 'Zauberer', wruss wolchwić 'zaubern' asl. volchvica 'Wahrsagerin'.
 - III. Beispiele, in denen Rgv. \$ für & hinter i, u steht.
- (15) Rgv. úṣa (X 95, 4) 'Liebhaber' (úṣo yádi váṣṭi) steht, wie bereits Grassmann erkannt hat, für úṣa. Ebenso steht in Kasmirischen Rgv-Ms. I 162, 11 uṣádbhyo für uṣádbhyo.¹

Ferner ist in Rgv. das auslautende ş von dem Verb piş wie s behandelt worden. So lautet die 2. Sing. Inj. und Impf. sampiņak für *sam-pinaṣ.² In klassischer Zeit ist von dieser Wurzel ferner apikṣam, pekṣyati belegt. Ahnlich überliefern die Grammatiker von karṣati die Formen akṛkṣat, krakṣye, die in Anlehnung an karṣati gebildet sind, und von viveṣṭi (W. viṣ)

⁽¹⁾ In Rgv. I 6,3 ist uṣádbhis unmöglich von uṣás abzuleiten (vgl. Scheftelowitz, IF. XXXIII 153 f.) sondern steht für uṣádbhis, worunter die hilfreichen Marutas zu verstehen sind. die in diesem Vers wie auch sonst häufig als maryā bezeichnet werden (I 61, 4; 64, 2; III 54, 13; V 53, 3; 59, 6; 61, 4; VII 50 1; X, 77, 23), den Indra stets begleiten und seine Brüder sind (vgl. I 70, 2: Kiṃ na indra jighāṃsasi bhrātaro marūtas tāva) Unter allen Gefährten, die Indra in dem Vṛtra-Kampfe beistehen, sind die Martus die treuesten Helfer. Ein Teil der vedischen Lieder und die rituelle Literatur bringt sie so häufig in Zusammenhang, dass man die Verbindung als Gemeingut der RV. angesehen hat (Hillebrandt, Ved. Myth. III 312). Der Vers I 6, 3 lautet: "Dem Lichtlosen Licht schaffend, dem Farblosen Farbe, O ihr Männer (=Marutas), wurdest du (O Indra) mit den Huldreichen (*usadbhis) zusammengeboren". usant dient sowohl im Sg. als auch in Pl. häufig zur Bezeichnung von Göttern.

⁽²⁾ Betreffs des n vgl. Benfey S. V. Einl. XXXV. Nach Bartholomae IF. III 171 A soll "sám pinak nach prá pinak" gebildet sein.

die Formen vekşyati, vivikşa, wo das & von der W. vis hergenommen ist. In Rg. vividdhi (I 27, 10; VIII 85, 12) ist bereits das wurzelausl. \$ vor dem Imp. suffix -dhi wie & behandelt ¹

Patanjali Mahabhaşyam (ed. Kielhorn, I 24) macht ausdrücklich darauf aufmerksam, dass man in der Aussprache \$ und \$ verwechsele, weshalb man şaşa für sasa und palāşa für palāsa sagt. Jabāla Upan. 2 bezeugt ferner, dass s als s gesprochen wurde. Darauf beruhen z. B. Schreibungen wie susi, susira (Ap śr.) "Höhlung" neben ülterem susi, susira (l. cavus); sramsayitva (AV IV, 16,7) für sramsayitvá, srgala (Manu IX, 30) für älteres srgāla; sveta (Bhāvaprak., p. 102) für älteres sveta caturasram (Saubhāgyalaksmī Up, in 108 Upanisads ed. Pāndurang Jāwajī, Bombay, 1925, 549) für caturasram; vamsisīya (AV. IX, 1, 14: 16, 9, 4) für vamsīsīva (Opt. Aor. von van): kūšmá (MS.) für Rgv. kūšma; sikšasi (Vālakhilya III 6; IV 8 in den Rgv. Mss. Brit. Mus. Add. 5351, India Office 2131) für śiksasi. Vasistha (Bhav. Pur. 139, 54,; 140, 30; III 1, 47; IV 53, 23) für Vasistha; visrabdhāh (Ram. II of) für visrabdhāh; santva. santvā 'Beschwichtigung' aus santva, santva; sārikā 'Krähe' fur sāri, sārikā : lat. corvus. Weitere Beispiele über die Verwechslung der 3 Zischlaute in nachvedischer Zeit habe ich in WZKM, XXI 132 behandelt.

⁽¹⁾ Vgl. ferner Scheftelowitz WZKM. XXI, 125 fg. In Rv. kóśa 'Kufe' ist das ś ursprünglich (vgl. daselbst 127). Jünger ist die Schreibung kosa, die zuerst in Praisādhyāya (Ed. Scheftelowitz, Apokryphen d. Rgv.) VII 1 f, T Br. III 6, 2, MS. IV 13, 2 belegt ist und zwar in dem Wort akoṣadhāvanīr (duras) "die nugebogen gehenden (Türen)".— Ṣaṣṭha (lat. sextus) aus *sakṣ-ṭha ṣaṣṭi aus sakṣ-ṭi. Nach snalogie von caturtha pañcama, saptama: catur, pañca, sapta hat sich aus ṣaṣṭha die Lautform ṣaṣ ent vickelt, die das ursprungliche *sakṣ verdrangte.

THE WORD ARI' IN THE RGVEDA SAMHITA

K. Chatto pādhyāya.

म्नरिन्दमं नमस्कृत्य राधवमार्थम् भृतम् । मरिशन्दार्थयुग्मस्य निरुक्तेर्निर्णये यते ॥ बाह्युचे संहिताप्रन्थे शन्दोऽयमार्थसम्मतः। भृयश्य शत्रुपर्यायः शौमेरारिप्रभावितः॥

It is well known to students of the Rgveda samhita that the word ARI' has been used in it in both a good and a bad sense. either as meaning 'active', 'pious', 'a pious man', etc., or as 'niggardly', 'godless', 'a niggard or an ungodly man', 'a foe'. etc. This strange phenomenon has exercised the brains of several scholars, 2 but the riddle of how a word could have such contradictory meanings in texts of the same period still remains unsolved. It has been proposed to analyse the word as a-r i', originally meaning having no wealth' and having the regular accent of a Bahuvrihi with the privative particle a. The word is then believed to run in two different channels, in one 'having no wealth' coming to mean 'meek' or 'humble'> 'a suppliant'> 'a worshipper of the gods'> 'a pious man'> 'a noble man' and in the other 'a niggard'> 'an envious being'> 'a bad person'> 'a foe'. This is highly ingenious no doubt but fails to give conviction. It is the first series which is unconvincing. Passage from 'having no wealth' to 'worshipping' is hard to see in view of the fact that the Rksamhita priest often praised his gods for the benefit of his rich patron. Besides this, passages like 1-150-1. purútvā dā svā'n voce ari'h, where dā svā'n='giving' goes along with a rith make it impossible, as Neisser points

^{1.} Grassman, Woerterbuch zum Riveda, 105-6.

^{2.} Geldner, Vedische Studien, III, 72ff., Oldenberg, Z. D. M. G., 54. 177ff. Rgveda, textkritische und exegetische Noten. I. 384, II. 28 and passim, Bergaigne, E'tudes sur le lexique du Rig-veda, 182, Ghate Lectures on the Rgveda (Ied.), 121-7, Neisser, Zum Woerterbuch des Rgveda, 98ff, et cetera,

out, that a r i' h should mean 'having no wealth'. The second series of meanings is, however, more readily comprehensible. 'Having no wealth' can easily mean 'having no wealth to give to others'> 'a niggard', as 'm a g h a' v a n t' means 'having wealth'> having wealth to give to others' = 'bounteous'. The major portion, if not the whole of the Rksamhitā, being a priestly composition, it is but natural that 'the niggard' (=refusing Bloomfield's buksheesh) should become a type of all that is bad.

The references for the two sets of meanings are: -

(1) In Good Sense:

I-4-6, 70--1, 71-3, 122-14, 150-1, 184-1, 185-9; III 43-2; IV-2-18, 4-6 (1); V-48-5, 54-12; VI-25-7, 45-33, 51-2; VII-8-1, 34-18, 60-11, 92-4; VIII-1-4, 54-9, 61-16, 83-3; Vālakhilya 3-9; X-27-8, 28-1, 39-5, 86-1, 3, 148-3.

(2) In Bad Sense.

I-73-5, 118-9, 169-6 (†); II-8-2, 12-4, 5, 23-13, IV-16-19, 20-3, 29-1, 50-11; V-2-12, 33-2; VI-13-5, 14-3, 15-3, 16-27, 20-1, 24-5 36-5, 48-16, 59-8; VII-21-9, 31-5, 34-10, 48-3, 56-22, 68-2, 83-5, 97-9; VIII-21-6, 24-22, 33-14, 39-2, 48-8, 49-12, 55-12; IX-23-3, 61-11, 79-1, 3; X-42-1, 59-3, 115-5, 116-6, 133-3; to which may possibly be added I-33-31, I-121-15, VI-47-9 and X-191-1.4

ARI' in a good sense seems connected with ary a's

- 3. Op cit., p. 98.
- 4. The above references are not copied verbatim from Grassmann. I looked up all these passages and succeeded in checking some of his mistakes. The same remark also applies to the other references in this paper.
- 5. I 33-3 (?). 81-6, 9, 121-15 (?); II-23-15, 35 2; IV-1-7,2, 12, 16-17, 24-8; V-33-6, 9, 34-9. 75-7 (a r yā'; VI-47-9 (?)-86-7; VII-21-5, 64-3, 65-2, 86-7, 100-5; VIII-1-34, 19-36, 52-7; Vālakh. 3-9, 6-7; X-20-4; 27-19, 34-13, 76-2, 89-3, 191-1 (?). Of all these passages I-33-3, I-121-15, VI-47-9, and X-191-1 may possibly have a r y a' h as gen. sg. of a r i' = 'foe' or 'niggard', instead of masc. sg. of a r y a'—'the excellent one'

'kind', 'benevolent', 'righteous', 'pious' et cetera and a'rya' ('Aryan' as an adjective and a noun) in the Rv. S. and airy a and ariya of the Avesta and the Ancient Persian Inscriptions. We should follow Neisser's suggestion in adding to the etymology the Greek word aprotos, meaning 'noblest', 'best of its kind' which is believed to be one of the irregular superlatives of ayabo's, it being further assumed that "In the early prim. Indg. period the comparative and superlative stood in no grammatical relation to the so-called positive. '8 I cannot, however, help feeling that it was not so and it is on account of the disappearance of words that we cannot always find the corresponding positive or superlative bases in Greek or other langu. ages. The Sanskrit language gives abundant illustration of the former existence of words and forms which recur later only in special combinations, e. g., puspadhanvan (showing the old d h a' n v a n = bow), yuva-jāni (the old ja'ni = woman). I have, therefore, no hesitation in taking apports to be a superlative from a stem * api. or * api. The accent is on the sylluble (or third from the end) as in (=mahistha, from $\mu \epsilon_{\gamma a \varsigma} = \text{Vedic} \quad m \, a \, h \, a' \, h$ and $m \, a \, g \, h \, a' \, h$ with accent on the second syllable), ήδιστος (=s v a' d i ş t h a h with accent on the first syllable, though the positive s v ā d u'h, Greek noo, has accent on the second syllable, (-laghisthah) et cetera. The passage from 'noble' to 'Aryan' in arya, airya or ariya is very natural under the influence of race pride and, it is possible that a r i' has got that sense in some passages of the Rgveda samhita.º

^{6.} I-51-8, 59-2, 96-3, 103-3, 117-21, 130-8, 156-5; II-11-18, 19; III-34-9; IV-26-2, 30-18; V-34-6; VI-18-3, 22-10, 25-2, 33-3, 60-6; VII-5-6, 18-7, 83-1; VIII-24-27, 92-1; Vālakhilya 3-9; IX-63-5, 14, X-11-4, 38-3, 43-4, 49-3, 65-11, 69-6, 83-1, 86-19, 102-3, 138-3.

9. E.g. in VI-45-33.

I have already said that a r i' in a bad sense is a Bahuvrihi formed from a-(='not') and ri (weak form in compound of rai, rayi-'wealth', as in b r h a' d-ri et cetera). The usual sense is that of 'a niggard' but sometimes the meaning seems to be 'a foe.' In many cases it is difficult to ascertain whether the poet meant 'a niggard (or envious being)' or 'a foe'. The sense of foe' realy constitutes a difficulty, because the passage from 'niggard' to 'foe' is not so easy as from 'moneyless' to ' niggard' and we have other words in the Rv. S. for an enemy, v r t r a', d v e' s a s et cetera. In the later language, of course, ari means 'an enemy' and that alone, but this gives us no help for its correct etemology. A r i' = 'enemy' in the Rgvedasamhitä has, therefore, remained a great problem with me for a number of years.

Recently some solution of the difficulty has seemed within sight. A somewhat similar word seems to have existed in the old Sumerian language, which Gadd 10 transliterates as erim 2 and Langdon 11, earlier, as 1 ari. It will be recalled that Hall threw out a suggestion years ago that the old Sumerians were connected with the Dravidians of India 12 and several scholars have in recent times followed him and believed, further, in the Sumerian affinity of the dwellers of the pre-historic Indus basin. It must be admitted that connexion of the Sumerians with the Dravidians or with the pre-historic inhabitants of Mohenjo-daro, Larkana, Harappa etc. has not been proved. Keith's ctatement, however, that the facial aspect of the Sumerian patesi Gudea in his statues seems to be "wholly un-Dravidian" and I have myself seen a number of Dravidians with the receding fore-

head and peculiar skull we find in the Sumerian sculptures.14 Regarding the further connexion of the Sumerians with the prehistoric dwellers of the Indus basin. I may say that a bust I saw in the Mohenjo daro Museum in November, 1928, appeared in my eyes as having strong resemblances with Sumerian statues like those of Gudea. 15 G. A. Barton in his recent article in the J. A. O. S., "Whence came the Sumerians?" 16 has combated the Indian hypothesis. 17 But his objection that not all the signs in the seals of Harappa and Mohenjo-daro agree with Sumerian signs creates no great difficulty for we may have here an earlier or a later or a different settlement of the same people and some differences in writing would be inevitable under the circumstances. Consequently the hypothesis that before the advent of the Aryans, the Punjab was inhabited by a people having Sumerian affinities seems still possible or even likely. Consequently a native word ari or erim, meaning 'foe', could easily affect Aryan usage and give to a-r i'='a niggard' the occasional sense of a 'foe', which had the good fortune of surviving as the only meaning of the word in later Sanskrit, to the exclusion of 'a niggard' and of the good sense, 'a kind' or 'noble person'.

15. See Archaeological Survey of India, Annual Report,

1925-26, Plate XXVIII.

^{14.} I must confess that I do not very much believe in identification of races of very different periods on purely anthropometrical grounds, for emigrants have been known to have changed their skulls in a few generations under the influence of the new environment. See Franz Boas, Changes in the Bodily Form of Immigrants (Columbia University Press, 1912). Besides this there is always in such cases admixture of blood with other races with a resultant physical change. It cannot be assumed that the present day speakers of Dravidian tongues carry cent per cent Dravidian blood. The only safe method that can be pursued for proving or disproving the Sumerian affinity of the Dravidians is linguistic. But for this we require trained linguists, possessing deep first hand knowledge of both the languages and not a Waddell or a Vaidyanatha Ayyar. It may be noted here that like Sumerian, Dravidian languages are agglutinating.

¹n. Vol. 49 pp. 263 ff.

^{17.} pp. 264-6.

Another classical word for 'foe' is arati, which we find in the Rv. S. usually as an abstract or action noun, meaning 'niggardliness', 'envy', 'hostility', etc., 18 but also as a concrete noun. meaning 'godless person', 'demon' or 'demoness' and 'enemy'. The accent is on the first syllyable in both the cases. Consequently we cannot understand the samāsa as a 'Bahuvrīhi. even for the sense of 'enemy'. The change of meaning from 'hostility' to 'a hostile being', without a shift of accent, is probably due to personification, the transition being indicated by the meaning of 'demon' or 'demoness'. We may find a parallel in d v e's as, which is used in the Rv. S. for both 'animosity' and 'enemy'.20 It is possible, however, that a'rāti and dve'sas as concrete nouns have been influenced by a r i' as a concrete noun meaning 'a foe', because abstract or action nouns (at least those ending in -as or -an) usually shift the accent to the final syllable, when meaning concrete or agent nouns. 21

The Sumerian word that has been suggested above as affecting the meaning of the Vedic word a ra' seems to be a native Sumerian word, for though there is a word in that language with the same phonetic value but written differently—its meaning being 'man', 'servant', 'soldier', 'army', ²² (1) there seems to be some pictographic connexion between the signs of the two words, (2) the sense 'army' seems to supply the connecting link between 'man' and 'foe' and (3) ur, ²² 'to bristle', seems to be the

^{18.} I-29-4; II-7-2, 35-6; IV-4-4, 50-11; V-53-14; VI-53-14; VI-16-27, 44-9, 48-16, 59-8; VII-83-3, 5, 97-9; VIII-39-2, 48-3, 60-1; IX-79-3; X-34-14, 63-12, 133-3.

root behind both the words. 23 Variety of signs with identical phonetical value is a too well known phenomenon in the Sumerian language to make Gadd's 2erim or Langdon's 2ari a non-Sumerian word.

In conclusion, I wish to remind students of the Rksamhitā that other non-Arvan words have been believed to occur in the Rv. S., e.g., manā' of VIII-67-2, meening 'a weight or an ornament', connected with the Babylonian word minu or ma-na²⁴ (from which we have Greek myā and Latin mina); we find this latter word also in Sumerian (e.g., in the Inscription of Sin-gashid. king of Erech 25 as ma-na.)26 It should be noted that man a's occurs only once in the Rv. S. and that in the Eighth Book. which for various reasons appears to be a later collection than the rest of the work except Book X. This Eighth Book has also strong western affinities, 27 which would make the occurrence of a Sumerian or Babylonian word in it easily intelligible. The other word mana cocurring four times in the Rv. S. thrice means 'devotion or' 'attachment' (I-173 2, IV-33-2 and X-6-3) and once 'wrath' or some such thing (in II-33-5, in connexion with Rudra). In the previous case derivation from \(\square\) man to 'think' > 'to worship' is quite evident. The same etymology seems possible in the latter case too, in view of the fact that many u' in the Rv. S. means both 'ardour' and 'wrath'. It is, however, tempting to connect man a' of II-33-5 with the Melanesian word mana, well

^{23.} It is at least so for ari = 'foe', according to Langdon, loc. cit. Delitzch gives a root II ar-i 'to devastate' (loc. cit.)

^{27.} See Hopkins in J.A.O.S., XVII. pp, 81ff. In the Avesta minu occurs twice (Yašt V. 127 and XVII. 10) in the sense of a necklace. See Bartholomae, Altiranisches Woerterbuch, 1186, under minay with note.

known to anthropologists, meaning a mysterious power inhering in a person or object coming in whose contact a man may injure The researches of J. Przyluski and following him, himself.28 of Sunitikumar Chatterji, have abundantly made clear the Austric that neo-Indian words. which affinities of many the Austric peoples must have once inhabited India. I am not in a position to determine whether the Melanesian word mana is an Aryan loan word or the Vedic word mana' of II-33-5 is of Austric orgin, but the former may be the right view, because of the double usage of the word many u' in Rv. S.29 and the capability? of \(\text{man}\) to think of lending itself to the meanings of both good A r i', however, can hardly have come from a and bad thinking. root that can give both' noble man' and 'foe'.

Post-script.—The above paper was written more than three years ago. Since then I have felt that Indo-European etymology of ari='foe' is not absolutely wanting. First of all, we have arika='inimically disposed' in Ancient Persian (Behistun IV I.13) though Bartholomae (Altir wörterbuch, 189) connects it with Av. ayra (=skt.asra?). One may also think of Greek \$\varepsilon \varepsilon = 'strife' though Brugmann, (kurze vergleichende Gramatik \footnub 426), Uhlenbeck Kurzgefasstes etymol. Wörterbuch dai Sprache 13 and others have doubted the connexion. It is possible that ari = 'noble' and ari='foe' of Veda come from two distinct I.E. words of somewhat similar sound. The question is however wrapped in a good deal of obscurity. I allow this paper to be published because the summerian affinity pointed out above is interesting and may be suggestive to those who believe in a prehistoric contact between. Indo-European and Sumerian.

^{28.} See Marett, The Threshhold of Religion, 12ff, et passim.

^{29.} Compare also English passion, which has been used both in a good and a bad sense.

PANINI'S GRAMMAR AND THE INFLUENCE OF PRAKRIT ON SANSKRIT.

Vidhushekhara Bhattacharya,

Principal of the Vidyabhavana, Visva-bhāratī. Santiniketan.

It is well-known that Prakritisms are found even in the Vedic language. That it has exercised a great influence also on classical Sanskrit can be shown, among others, from the grammar of Pāṇini himself. A few instances from that work are given in the following lines.

It is a general rule (VIII. 3. 23) that m followed by a consonant becomes m; e. g. vanam (for vanam) hasati. But when after m there is h followed by m, the first m becomes m as usual, or it may remain unchanged; e. g. kim before hmalayati may be either kim or remain as kim there being no change whatsoever in the second case. But why? It is quite evident from the very observation of Pän:ni that in his time in the country or in a particular part of it the sound hm was in many cases not pronounced as it should have been; i. e. lirst h and then m uttered in a syllable; but it was pronounced as mh owing to metathesis (varna-viparyaya) as in Prakrit and Indo-Aryan vernaculars For instance, Skt. brahmana, Pkt. bamhana, Bihāri bāmhan.

Similarly the origin of the next sutra na pare nah, (VIII. 3. 27) of Pāṇini where he says that m before h which is followed by n may optionally change to n (e. g. kim before hnute may be either kim or kin) is the same fact, that is to say, in Pāṇini's time some used to pronounce hn as nh; and he had to take cognizance of it in his grammar. C1. Skt. chna; 'mark', Pkt. cinha (and cindha,) Od., Beng, cinha, Skt. vahni 'hre', Pkt. vanhi.

Kātyayana noticed such metatheses in three cases more and added here a short sentence saying that m before k which is followed by y, v, or l optionally changes to them respectively (yavalapare yavalā vā, VIII. 3); e. g. kim before hyah,

hvalayati, and hlādayati may be kiy, kiv, and kil respectively. This clearly shows that, as in Pkt. and modern Indo-Aryan vernacu'ars, (i) hy was often pronounced as yh; (ii) hv as vh; and (iii) hl as lh. Cf. (i) Skt. guhya, Pkt. gujjha (gujha gujha), Beng. gujjha) Panj. gujjhā, Sind. gujho, Guj. guj, Mar. gūj; Skt. nahyati, Pkt. najjhai; (ii) Skt. jihvā, Pali jivhā, Pkt. jibbhā (and jīhā), Beng. jibbhā (jibh); (iii) Skt. āhlāda, Pkt. alhāda.

Such euphonic combinations (sandhi) as prejate (for pra+ eiate), not praijate; or upoșati (for upa+osati), not upausati (according to Pānini VI. 1. 94); or adyom (for adya+om), not adyaum; or adyodhā (for adya+odhā, odhā=ā+ūdhā), (not adyaudhā (in accordance with VI, 1. 95) are instance; of Prakritism. It is well known that such forms in Pali and Pkt. Kātyāyana notices some other forms of the kind and gives a few examples saying that when ascertainment is not meant (aniyoge) the forms like iheva (for iha+eva), and adveva (for adva+eva.) instead of ihaiva and advaiva respectively are quite correct. Similarly such words as sthulotu beside sthulautu, bimbosthi beside bimbausthi are admissible. For such uses in the Vedic language one may be referred to the Taittiriya Prātisākhya X.14; Macdonell. Vedic Grammar. \$70.2 (p. 64). He notices also a group of other words which are formed according to the rules of sandhi in Pali or Pkt. This group is known to the grammarians as Sakandhvadi which includes words like sāranga (for sāra+anga), halişā (for hala+ Isā), etc. besides śakandhu (for śaka+andhu). Later grammarians take this gans or group as an akrti-gana meaning thereby that it does not include only the words which are actually enumerated in it, but also others found in use in literature.

The phenomenon of ya-śruti in Pkt. hardly needs any special mention. The literal sense of the word is 'hearing of y.' But, in fact, it implies that the y meant here is not a fully pronounced y, but only, so to say, the 'hearing' of it; i.e. y which is

uttered with a slighter effort (laghuprayatnatara-yakāra-śrutir bhavati. —Hemacandra, VIII 1. 180; Laksmīdhara, I. 3. 10).

Now according to Pāṇini, VIII. 3, 17 for kaḥ āste we have kay āste (ḥ drops and the hiatus is filled up by y). So far as Pāṇini is concerned there is nothing to show that this y is not a fully pronounced one. But in accordance with Śākaṭāyana quoted by Pāṇini himself (VIII 3. 18) and Vātsapra mentioned in the Taittirīya Prātis'ākhya, X.23, thus y is laghuprayatnatara 'uttered with a slighter effort.' It is sometimes called leśa¹ or 'attenuation' of y (Taittirīya Prātis'ākhya, X.23, see Whitney: Atharvaveda Prātis'akhya, II. 24), and is, in fact, nothing but the ya-śruti of the Prakrit grammarians.

It may be gathered from the above that \hat{y} (or laghuprayatnatara y, or less of y, or ya-śruti) of Śākaṭāyana and Vātsapra changed to a fully-developed y when Pānini wrote his grammar. But according to Sākalya, as says Pāṇini himself (VIII 3.19), in such cases there was no sound either as \hat{y} or as y^2 . Gārgya a predecessor or contemporary of Pāṇini is, however, of opinion that only in certain cases that sound is not heard.

All this is quite in agreement with Pkt. in some of the dialects of which there is y- while in others it is not.

The case is exactly the same with regard to v or v (lesa of v) though there is some difference of opinion according to different authorities.

It may be noted here that it is in this way that such forms as devayoh (for deva+-os, gen. or loc. dual), dāyin (for $\sqrt{d\hat{a}+-in}$), vāyu (for $\sqrt{v\hat{a}+-u}$), etc. or again bhūvādayah (for bhū+adayah; Pāṇini, I. 3. 1) can very satisfactorily be explained.

(2) The same view is held also by the author of the Taittiriya Prātis'akhya (X. 19); while Mācakīya says that after a or ā y and y followed by u or o are dropped (Op. cit X. 22)

⁽¹⁾ The word less is explained by a commentator saying luptavad uccāraņam, while another says ekadeso yathoktavisaye lupyate, ekadesah śrūyate.

A SOKAN VASA- 'YEAR'.

R. L. Turner.

The Sanskrit word for 'rain', várṣa-(n., later m.) in the Brāhmaṇas acquires the meaning 'year', for which it becomes the most usual word. But it retained the meaning 'rain', ospecially in certain compounds, such as prabandha-varṣa, vāta-varṣa-; and in the plural it continued to mean 'the Rainy Season.' The feminine varṣā-, usually in the plural, means only 'rain, Rainy Season.'

In Pali vassa- n. means both 'rain' and 'year'; but the plural vassā (m?- or < Sk. f. pl. varṣāh?) means only 'the Rainy Season'.

There seems, then, to be already a certain tendency towards differentiation, viz. várşa- n. 'year', varṣa- m. and varṣā- f. 'rain'. This is continued in Singhalese vas 'year' (<várṣa-)¹, but vasi 'rain', (<*varṣikā-enlargement of varṣā. or<vārṣika-).

Elsewhere other means were used to avoid confusion. The Inscriptions of Asoka unfortunately do not contain the word for 'rain'; but they have three divergent forms for 'year', a study of which discloses the same striving after differentiation.

In the Girnar inscription 'year' is vāsa. This cannot be from Sk. várṣa-², which would have become vasa- (i. e. vassa-). In the Eastern Inscriptions a long vowel before two consonants is shortened; but in Girnar it remains long, e. g. nāsti < Sk. nāsti, ātpa-<ātma-. We may therefore read vāsa- as vāssa- and derive it from Sk. vārṣá- yearly. As in several other cases

¹ Replaced in the modern language by avurudda.<* havadura-, loanword from Pa. samvacchara-.

^{*}As maintained among others, by Michelson, JAOS. 1911, p. 236; and in the last instance by Hultzsch, Inscr. of As., p. LIX. I have shown in Bull. SOS. VI. 2 that kāsati 'will do', sometimes quoted in support of the hypothesis that ass > ās, is probably to be read kāssati and is certainly a future made on the pattern of *dāssati < Sk. dāsyati.

(e. g. Sk. bailvá. which in l'k. bella., Hi. bel etc. supplants bilva.) the Vrddhi adjective was used to form a substantive, which with its long vowel provided a word distinct from vassa'rain' (<Sk. várṣa-, varṣā-),

Whether vasa- of Shah. Man is to be read vassa- or vāssa-, we cannot say in the absence of any modern form for 'year' from this word. vāssa- may have existed, but subsequently been driven out of use by collision, c.g. in Sindhi, with a loanword of the type vāsu m. 'scent'- But the apparently complete absence of a descendant of vāssa- in all NW. languages renders it probable that the form is to be read as vassa.

The forms of the Eastern group- vasa-, vasa-, and vasa (i.e. vassa-, etc.)- may be derived from earlier vassa-, and have then fallen together with vassa-<varsa-. But we have no criterion for deciding.

In Girnar, in one instance, there appears another form, viz. varsa-, in place of the usual vāsa- (vāssa-). Here is another device to find a form for the word for 'year' different from that for 'rain', namely the borrowing of a learned Sanskrit form.

It is this procedure which has been generally adopted (subsequently to the Asokan Inscriptions) in most Indo-Aryan areas to provide a word for 'year': Pk. varisa-m,n.; Rom. eur. bers m., Syr. wars. Shina baris (pl.barizi) m. Kash warihy, waharm. W. Pah. pād. cam. barh, Nep. barsa Ass. barih, Bg. barih, Or. barsa, Hi. baras m., Pj. varah m., Si. varhyu m., Guj. varas n., Mar. varīs n.

In distinction to this the North-West preserves várşa, varşā- in the sense of 'rain': Kalasha bashik 'cloud', Torwali bašā m. 'Summer' (?), Kash. wosu m. 'shower'. Si. vasa f. 'rain'.

In Shina, where it might collide with bas f. 'language' (<bhasa-), it has been replaced by szu m. <Sk. abhrsa-n, m, or ardrs- (cf. szu adj. 'wet').

In Lahndā and Panjabi, where it might collide with vass m. 'power' (<Sk. vasya- n. !), it has been replaced by meh m. Sk. < meghá- m. 'cloud'.

In the Centre, South, and East, where MI. vassa-> *vās, *bās-would certainly collide with vās, bās <Sk. vāsá-, it has been replaced in various ways.

In Marathi the compound prāvṛṣi-m. 'the Rainy Season' provides a general term for 'rain', viz. pāūs m. (Hi. pāwas m. and Guj. pāvas m. 'retain the meaning 'Rainy Season). In Gujarati another compound, virsāi m. (<OGuj. varasāt, cf. Sk. varṣārātra- and see below), is the usual word for 'rain'. Hindi, like Lahnda and Panjabi, uses mēn m. <meghá-. In Nepali pāni (<Sk. pānīya-n.) is the general term for rain; the corresponding word pānī m. is also so used in Hindi. Bengali has jal (<Sk. jala-, or perhaps loanword) or the Sanskrit loanword bṛṣṭi or bisti. Only in Nepali, and there only in the compound bīṣi-bido 'cessation of the Rains', does varṣā- or vārṣika- survive.

In Prakrit the loanward varisa- means both 'year' (see above) and 'rain': in the modern Indo-Aryan languages the meaning, as we have seen, is restricted to 'year'. But the compound varisāratta- n. (formed after Sk. varṣā-rātri- f., varṣā-rātra-n.: Pa. vassāratta-n.), in which the varisa- 'rain' is not liable to be confused with varisa 'year', remains in a number of languages in the sense of 'the Rainy Season', viz. Kash. waharāth (dat. waharöiü) f. Guj. varsād m. (only 'rain'), Nep. Hi. barsāt f., Bg. barisā, Or. barasā.

The verb vársati > Pa. vassati survives in the North-West: Kash. wasun, Lah. vassan., Si. vasanu. But in the Centre, South and East, where vass-> "vās-, "bās-would collide with vās- bās- < vāsayati and vāsyate, it is descendants of Pk.

^{1.} With-ā <-ātra-, as in Pk. amg. rāī <rātri-, Sgh. pā <p\$tra-.

varisaü (loanword from Sk. vársati) which are employed: Ku. barsaņo, Nep. barsanu, Ass. barahiba, Or. barasibā, Hi. barasnā, Guj. varasvū, Mar. varaspē. This extends even into Panjabi with varhņā: for here vass-'to rain' collides with vassnā 'to stop'.

Finally, though varisa- loses its meaning 'rain', there is no likelihood of confusion between the verb varisa' 'rains' and the substantive varisa- 'year'.

[Contributed in 1930.]

DHARMAPRABHASTRI'S VERSION OF THE KALAKACARYAKATHA ¹

W. Norman Brown, Professor of Sanskrit, University of Pennsylvania.

Up to the present texts of four versions of the Kālakācāryakathā or 'kathānakam have been published, three of these from single manuscripts, the fourth in a more or less critical edition; in addition there is a Kālakasūriprabandha in the Prabhāvakacarita.* Other versions are in existence, represented by numerous Mss. in Jaina bhandars and in other collections in India, Europe, and America. Many of these I have photographed, or copied, or collated with manuscripts already transcribed by me, and most of these versions, I shall, in due course, publish. In addition there are a number of references to Kālaka in Jāina works, giving incidents from the Kālakācāryakathā and in some cases additional information. Such references as I have found will, in their proper place, be incorporated in a study of the Kālaka cyc'e. In this paper I propose to present only a critical edition with translation and a few notes of one version of the Kālakācarya legend, namely that composed as a summary (samksepatah) by the sūri Dharmaprabha in the Samvat year 1389.

(1) This edition and translation of **Dharmaprabhasūri's** version of the Kālakācāryakathā is a portion of a study of the Kālaka cycle made by me during the year 1928-29 as a fellow on the John Simon Guggenheim Memorial Foundation. The materials were

mostly collected in India.

⁽²⁾ The editions to which reference is made are; (1) "Das Kālakācārya-Kathānakam", by Professor Jacobi in **ZDMG** 34, 247-318 (cf. **ZDMG** 35, 675-679); (2,3) "Zwei weitere Kālaka-Legenden", by Professor Ernst Leumann in **ZDMG** 37, 493-520; (4) Sri-Kālakācāryakathā, being in appendix to the Sri-Kalpasūtra, vol. 18 of the Sheth Devchand Lalbhai Jain Pustakoddhar Fund Series, Bombay, 1914. (This is a brief Sanskrit version in 65 stanzas); (5) Prabhāvakacarita, ed. Pandit Hiranauda M. Sharma, Bombay. Tukaram Javaji. 1909 (pp. 36 ff.) The name Kālaka alternates with the form Kālika.

This version is one of the two published by Professor Leumann from single Mss. and without translation. His Ms. gave no indication of the date of composition and contained a number of false readings which can now be corrected. number of errors in his Ms. were successfully eminded by him, as will appear in my critical notes. By a strange coincidence the other version published by Professor Leumann bears a peculiar relation to that of Dharmaprabha. It is the version ascribed to Bhāvadeva sūci, whose date was unknown to Professor Leumann in 1883 when he published the text, but who flourished in Samvat sixty-seven years before Dharmaprabha. Bhāvadeva composed his Kālikācāryakathānakam in śloka metre; Dharmaprabha, as seems obvious from a comparison of the texts, largely based his version on Bhavadeva's or one very close to it, abbreviated, changed the metre to arya, with a few other metres used sporadically, and added one onomatophetic stanza describing the rainy season. The most important differences between the two are in proper names. I have not published Bhavadeva's version here but shall perhaps do so elsewhere, as I already have the materials at hand for a critical edition.

In preparing this edition of Dharmaprabha's text, I have used five Mss. These are clearly divided into two groups (here designated A and B), yet all seem to come from a common source for all seem to have common corruptions, namely in stanza 9 nomulemi for nommulemi; in stanza 20, where all read patto instead of patte; and in stanza 4, where all tead sutting for mottum. For differences between A and B, see stanzas 5, 6, 10, 12, 17, 18, et passim.

The following abbreviations are used to indicate the manuscript sources of my edition.

A l Lohar Pol Bhandar (Ahmedabad), No. 33-3-3, being folios 93 verso to 98 verso of an illustrated paper Ms. of the Kalpasütra. Dated Samvat 1513.

⁽¹⁾ See in Bloomfield, Life and Stories of the Jaina Savior Pārçvanātha (Baltimore; The Johns Hopkins Press, 1919), p. 3.

- n Vijayanemisūri's Bhandar (Cambay), No. 181/2, being folios 137B-144B of an illustrated paper Ms. of the Kalpasūtra. Although all the folio numbers are present, nevertheless one folio is missing containing stanzas 44-50. No date.
- b. Preuss. Staats-biblothek (Berlin), Or. Mss. folio 1737, being an illustrated paper Ms. of 5 folios. No date.
- B w Wādi Pārśvanātha Bhandar (Patan), No. 18. 19. Illustrated paper Ms. of 5. folios Dated Samvat 1502.
- i India Office Library (London), bundle 1530 No date. I have not examined this Ms. but have relied entirely upon Leumann's edition of it; see the following item.
- [L The foregoing Ms as published by Leumann in **ZDMG** 37 (1883). 505-509.]

Words or forms which I have not found in the Paia-Sadda-Mahannavo (that most welcome work by Pandit Har Govind Das, T. Sheth, in 4 vols., Calcutta, 1923-28) are.

Khetta for ksipta (stanza 6)

kārai (causative of kr; stanza 35)

āra for ādara (stanza 42; noted by Leumann)

pairiccham, pairittham for pratirathyam (stanza 10)

Si for srī (?) (stanza 19)

ūraņi from anrņa (stanza 31; noted by Leumann)

si for **śri** is difficult, although the Paia-Sadda-Mahannavo (by. Pandit Har Govind Das; Calcutta, 1923-28; 4 vols.) records sī for **śri**. In n there appears a commentary written in marginally, but only one line of it oppears in my photograph. It seems doubtful if the commentary could give the correct rendering. for in the first part of the stanza n reads isiramsu°.

The editing of this stanza is conjectural. In the firs place I do not know the metre—It could conceivably be a very free floka (for such pādas see in Hopkins, Great Epic of India, pp. 453, 458), but this hardly seems probable. As chāyā I suggest:

TRANSLATION

In the city of Dharāvāsa King Vajrasimha had a son, prince Kālaka, born of queen Surasundarī. He once went for amusement to a park, heard a sermon by the master Guṇākara, and received iniation from him. He was established by the master in the position of sūri (pontiff), went wandering about with a following of many disciples, and came to Ujjayinī. (1—3c).

Then his younger sister, the very holy Sarasvati, arrived there with many nuns. As she was going outside, king Gardabhilla saw her. (3d-4).

"Ah, alas, great sage, alas, alas, Kālaka, sūri-chief, save, I beg, the great jewel of my virtuous conduct, which, alas, is being raped. Oh, save!" Even as she cried out thus, the girl was seized by the hair by that lust-diseased villain, and forcibly cast into his harem. O shame! (5—6).

When the suri learned this, he went there and said, "This is not kingly conduct. If fire comes from the moon and darkness from the sun, then the people are destroyed. Therefore, king, set her free!" The congregation, too, admonished him in the same way. Their word turned to poison in him like milk in a snake's mouth. (7-8).

Then, when the sūri saw the counsel scorned, he took this oath, "If I do not uproot (this fellow), then I, even I, am an enemy of the congregation." After he had taken this oath, being aware that the king was superior through the power of a magic art, he took the guise of a mad man, so as to wander along all the highways, crying out: "If this king has great might, then what is there beyond that? And if this city is charming, then what is there beyond that? And if I sleep in a deserted

^{1.} Collateral versions make it clear that she had gone outside to the latrine (viyāra. bhūmie niggayā). A low fellow, this Gardabhilla, to be hanging around the nuns' latrine. (Sarasvatī had become a nun when Kālaka was ordained monk).

house, then what is there beyond that! And if I go begging from house to house, then what is there beyond that?" (9-11).

When the ministers and nobles saw Kālaka in this state, they admonished the king. He replied to them, "Go give advice to your fathers!" (12).

The muni heard of this affair and went to śakakūla¹. There the king was called Sāhaņusāhi and the nobles Sāhi. The muni stayed in the city of a certain sāhi and daily won his favour with charms and sorcery. A messenger once came there sent by the Sāhaņusāhi with a sword in his hand. When the king saw him he went pale; and the sūri asked the reason. The king explained, "This (messenger) has been sent to me by my lord with a dreadful command,² and just so, according to the number, to the 95 other sāhis²." (13—16).

The master said, "Do not be worried!. Call together all the sāhis in one place, and go to India (the country Hinduga)." And he did all just so. When they had crossed the Indus and came to the region of Sāurāṣṭra (Surat), the rains broke, and they remained right there. (17—18).

Where at the advent of the rains: The Sun eager for inter course with Sri (or, eager to enjoy rich substance), the warrior, and the lake with its salty ground longed for the essences and the cranes that eat the riches of the stormy skies uttered their cry (or longed for the pool). (19)*.

When autumn came the muni urged them to go to the land of Mālava (Malwa), but they announced that they had no sup-

^{1.} Is this the name of a country or merely of the region east of the Indus!

^{2.} The command was to cut of his head with the sword and send it to the Sāhanusāhi in a metal pot which the messenger had brought. The number 96 was written on the sword.

^{3.} Translation conjectural. (The sun sucks up water; the warrior longs for the rains as a period of rest and love—play trasa).

plies. Then the wise sūri by means of magic powder made gold; this they shared and went to the land of Mālava. King Gardabhilla heard of this, came out from his city, went to the border of his kingdom, and fought with them. Then his army was smashed, and like a jackal he entered his city. (20-22).

The sābis invested the city; then one day they saw the fort empty, and they inquired of the sūri. He told them, "At some time to-day, which is the eighth, the king will accomplish the "She-Ass" magic art. You must watch for it." When they saw it (the She-Ass) on a tower, they reported it to the master. He said "When the charm for it is completed, our entire army, on hearing it bray, will become lifeless. You must withdraw two gavyūtas"; then put under my command 108 warriors (bowmen) who take aim by sound." And this they did. (23—26).

Then as soon as the She-Ass's mouth was wide open, but before it had uttered a sound, the soldiers filled it with arrows, as though it were a quiver. The She-Ass, because its power was destroyed, dunged upon Gardabhilla and fled. And the sāhis broke into the city. (27—28).

Gardabhilla was bound and made over to the suri. The muni rebuked him sternly; but he had no desire to renounce the world, being unfitted for salvation, and the muni banished him from his land. Then the suri devoted himself to the discipline, and purified his sister with the rites of expiation. (29-30).

Then these were called "saka". But in time king Vikrama was born, who cut off their line and rendered the earth free of

- 4. He sprinkled the powder on some bricks and converted them to gold. The powder had been given him by his sasana devi (female guardian deity), who had appeared to him by night.
 - 5. A distance said to equal four kos, about eight miles

debt. One hundred and thirty-five years later there was a saka king, after whom an era was named. This is occasional (to the main story). (31-32).

The reverend Sūri Kālaka then went to live in the city of Bhṛgukaccha (Broach). There the sons of the sūri's sister, Balmitra and Bhānumitra (the king and heir-apparent) revered the master and listened to the law. They had a sister Bhānuśri, whose son Balabhānu became disgusted with the round of existence and took the vow. Then the evil-minded chaplain there, in order to make the suri leave, caused improper alms to be given to the monks and did other such things. The sūri understood this and went to the city of Pṛthiviṣṭhāna, the ornament of the land of Mahārāṣṭra. (33—36b).

There king śālivāhana lived, a most devoted lay disciple. He led the sūri into his city with great pomp, extolled him, revered him, and settled him in a place free of living creatures. (36c—37).

Then the Paryuṣaṇā season arrived; whereupon the king requested the sūri, "On the fifth day of the light half of the month Bhādrapada we honour Indra. While I am observing the festival according to the custom of the people I shall not be able to perform the offices of the Religion. Therefore celebrate the Paryuṣaṇā on the sixth day." (38—39c).

The master said, "Even though mount Meru should shake, fire become cold, or the ocean sometime leave its bounds, even though the lord of day sould rise in the west, the Paryuṣaṇā celebration cannot come after the fifth." (39d—40).

^{6.} Text: puhavi jen' ūrani vihiyā. Bhāvadeva's version: mahī jen' ūrani kayā. For u rani Leumann suggested a-rna. Prākrit ūrani should mean "ewe", but I cannot make sense of the passage with that meaning. Nor do I see any other possibility that is without phonetic or formative difficulties. Hence Leumann's suggestion seems the best possibility. For confirmation, cf. in No. 91 of the story of Kālaka in the Prabhāvakacarita (P. 45), where at the coresponding point we read concerning Vikrama: sa co¹nnatamahāsiddhih sāuvarnapuruṣodayāt medinīm anrnām krtvā 'cīkarad vatsaram nijam

Then the king said. "In that case have the celebration on the fourth." The master agreed to this, as it is clearly stated in the Scripture, "Let the Paryusanā be celebrated with honour!" Then the king was delighted and said, "Sir, I am obliged, and so on the day of breaking the fast observed during the light half of the month my gueens shall provide much food, pure according to the ceremonial rules of pure food for the day of the monks' second meal after the fast." (41—43).

It was on this account that the sūri Kālaka thus fixed the Paryuṣaṇā festival on the fourth and the Order then endorsed it. Because the people there were devoted then to honouring the monks from that time even to the present a festival has been celebrated in the kingdom under the name of "Monk-honour". (44—45).

Then once upon a time the sūri, being aware that all his disciples had forsaken the rules of conduct, left them while they slept, and after telling the keeper of the monks' rest house went to his disciple's disciple, the sūri Sāgara. The latter did not recognize him and asked him. 'O elder, do I expound well or not?'' The master said, "You do it very well." (46-48b).

Then those wicked disciples repentently inquired of the rest house keeper, came there, and just as they were inquiring of the sūri Sāgara, they saw the master. They humbled themselves and touching his feet again and again asked forgiveness. Then Sāgarasūri was ashamed, and after the master had told him the illustration of the three piles of dust, he bowed down again and again and asked forgiveness. (48c—50).

Once upon a time śakra, after hearing the Nigoda doctrine from the Jina Simandhara in Videha, asked him, "Sir, is there any one in Bhārata who is versed in (the doctrine of) these (Nigoda creatures)?" The Jina said, "There is the sūri Kālaka." (51—52a).

⁷ The word arena also means "before".

So he went there wearing the form of a Brahman and asked the master the varieties of Nigoda. He gave him the exposition which begins, "The balls are innumerable." Then he asked how long he would live. The sūri knew him and said, "You are Puramdara (śakra)." Then śakra manifested his true form and delighted with that superlative knowledge of Kālaka sūri praised him with many kinds of songs of praise. (52b-54).

"When the congregation of the righteous hears his speech, which is like the rolling of thunder, it dances with joy like a peacock. "Blessed are you, O chief of munis. (55)

After thus giving praise, the king of the gods went to his own home. Then the chief of munis, knowing his time had come, gave up food, and possessed of countless excellences became a god. May he whose glory extends through the three worlds give a blessing to the Order. (56).

Thus the story of the reverend Kālkācārya has been told in summary by the reverend sūri Dharmaprabha in the year 1389. (57).

KASHMIR-BHATTA SIVASVAMIN'S UNPUBLISHED BUDDHIST MAHAKAVYA—KAPPHINABHYU-DAYA.

In the following pages an attempt has been made to give an account of the Kapphinābhyudaya of Sivasvāmin, who was a contemporary of King Avantivarman of Kashmir.

The reign of King Avantivarman (855/6-833 A. D.) forms one of the glorious records in the chequered history of Kashmir. Aided by his far-sighted and able Minister Sūra, he succeeded in giving the happy valley a comparatively long period of peace and prosperity which provided a fruitful era of great literary activity. As Kalhana says in his Rājataranginī:—

मुक्ताकराः शिवस्वामी कविरानन्दवर्धनः प्रथां रत्नाकरश्चागात् साम्राज्येऽवन्तिवर्मगाः ५,३५ ॥

'Muktākaņa, Sivasvāmin, the poet Ānandavardhana and Ratnākara became famous during the reign of Avantivarman.

Anandavardhana and Ratnākara have their fame established through published works, Muktākaņa is familiar only through stray quotations, while Sivasvāmin till 1893 was known only from several stanzas attributed to him in Anthologies and Kṣemendra. Seṣagiri Sāstrin in 1893 gave an account of a poem Kapphiṇābhyudaya by Bhaṭṭasivasvāmin. Therein he traced and identified the quotations from that poem given in the Ṭikāsarvasva of Sarvānanda and in the Subhāṣitāvalī of Vallabhadeva. Professor Thomas in his Kavīndravacanasmuccaya gave a fuller account of the stanzas attributed to Sivasvāmin in different anthologies and of the quotations from his work, the Kapphiṇābhyudaya.

The poem itself seems to have been quite well known and the fact that it had established a reputation far itself among the great Sanskrit works is testified to by the liberal use made of it by many a Sanskrit writer. Its importance as a literary

production of note was soon realised by compilers of anthologies, writers on Sanskrit poetry, commentators on Lexicon, and Grammarians. The compiler of the Kavindravacanasamuccaya (circa 1000 A. D.), Sarvānanda (1159) Sridhara (1205), Sārngadhara (1363), and Ramānātha (1537), have all at one time or another recognized its merit and acknowledged their debt by extensive quotations from it. As it would appear Mammata (circa 1100 A. D.) has also quoted from it in his Kāvyaprakāsa although it is surprising for a writer of such a comparatively early date that he should not have given the source.

Further, Sivasvāmin's work assumes an importance in the history of Sanskrit Literature in general and the literary history of Kashmir in particular, in-as-much-as it shows the development of Kāvya in Kashmir and the influence of Ratnākara on his contemporaries. To the religious history of that period it makes a useful contribution. Its theme is neither Paurānic nor epic like most of the Mahākāvyas, nor is it historical like Vikramānkadevacarita or Navasāhasānkacarita; on the contrary it deals with the Buddhist legend of King Kapphina who is well known in Pāli and Sanskrit Buddhist Literature.

From the Buddhist sources it appears that King Kapphina was a contemporary of the Buddha and was converted by him to Buddhism. The Buddhist tradition has given him a place among the twelve chief disciples of the Buddha, and refers to him as having become an Arhat in the Buddha's life-time. Even in the engraving on the walls of the Borobudur Temple in Java his figure appears among the Śrāvakas. Such a personality, popular in legends and tradition, provided Śivasvāmin with a suitable hero for his Mahākāvya.

But the merit of Sivasvāmin lies in moulding the material furnished by such a legend into a Mahākāvya written in strict observations of the rules laid down by writers on Poetics,

While doing so he could not escape the influence of the religious atmosphere of his age. Although he acknowledges that in writing his peom he was inspired by his Buddhist preceptor, Candramitra, yet it is not the Buddhist ideal of monkhood that he holds supreme in the concluding verses of his poem, but it is that of a householder or the 'grhastha' whose 'āsrama' has always given the highest place in the fabric of Hindu Society. This seems to indicate the process of absorption of the late Buddhism by the reviving Vaisnavism and suggests that the teachings of Kṛṣṇa and the Buddha had beguu to be reconciled. Thus Sivasvāmin's poem is an important evidence of the tendency which gradually found its full expression in Kṣemendra's Dasāvatāracarita.

From the following stanza, written perhaps by some contemporary admirer of his it seems that Sivasvāmin wrote several works out of which this poem and some stray verses attributed to him in Anthologies and Ksemendra have survived the ravages of time.

> वाक्यानि द्विपदीयुतान्यथमहाकाव्यानि सप्त कमात् ज्यक्षप्रत्यहानीर्मतस्त्रीतिकथालचागिः चेकादश कृत्वा नाटकन।टिकाप्रकरगप्रायान् प्रबन्धान् बहून् विश्रामत्यपुनापि नातिशीयता वागी। शिवस्वामिनः

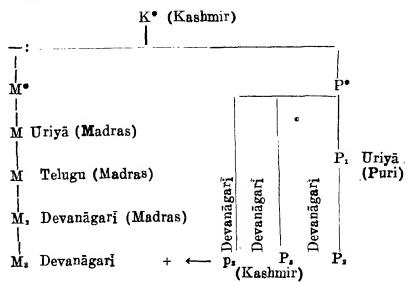

'Not even now does Sivasāmin's unsurpassed Muse find rest though he has composed seven Mahākāvyas which have 'dvipadīs', and has written eleven lacs of hymns to siva every day, and several dramas, and other minor plays and Prakranas and other prose works.'

It could not be, therefore, possible to compare the style of this poem with that of any other work of the poet except with a few stanzas given in Anthologies and Ksemendra. It cannot, therefore, be ascertained what stage of development this poem marks in the literary career of Sivasvāmin. But it was possible to make comparison with the Mahākāvyas of his contemporary

Ratnākara and his predecessor Māgha. This would serve to illustrate the greatness of this poet in an age when literary genius was by no means rare.

From the detailed comparison of the various existing texts of the poem it is found that there are two families of Manuscripts in respect of this poem. The oldest palm-leaf Manuscript is preserved in Uriyā script in Madras, and has yielded two more transcripts, one in Telugu and one in Devanāgarī. To the other family of the MSS. belongs another paper MS. at Madras, which has been proved to be closely related to the recently discovered MS. at Puri, and the transcript from Kashmir.

The fact that the Text has passed through the Uriyā, the Telugu and Devanāgarī scripts necessitated an investigation into the details of the orthography of these scripts in their relation to sāradā in which the original was written by the poet. The scribal errors due to the orthographic or phonetic similarities of symbols have been fully taken into account and the different readings and omissions noted. The conclusions arrived at by this study gives us the following pedigree of the extent MSS, and transcripts of the Text.

The transcript of M, is that of the Madras Manuscript and belongs to Professor F. W. Thomas, oxford, who kindly lent it to me for my use. It is a fuller Text than the others, but the absence of a verse authentically known to have been quoted from the Kapphinābhyudaya shows that even this does not represent a complete transcript of the original poem.

On the basis of these enquiries and studies the text has been reconstructed and an attempt has been made to present sivasvāmin's poem in its original form.

CONTENTS OF THE POEM.

Canto. Stanzas.

- I. 1. Invocation to the Buddha as Dasabala.
- 2-22. Description of Lilavati, a town situated on the Vindhyas.
 - 23-44. Description of King Kapphina, master of Lilavati.
- II. 1. A spy from the North arrives in the Court of King Kapphina.
- 2-3. The poet remarks on the need for the system of espionage.
 - 4. The spy enters the Assembly Hall.
 - 5-9. The Hall is described.
- 10-13. The spy sees King Kapphina, who is again des- cribed.
- 19-22. The King receives the spy, who addresses the Assembly.
 - 23-53. The spy speaks of the Kosala Kingdom and its ruler, King Prasenajit, the latter's hostility towards King Kapphina, and his advice to overcome him.
 - III. 1. The description of the effect produced on the vassal chieftains who were attending the Court of King Kapphina by the news brought by the spy.

 The chieftains are:—

2.	Subāhu.	2 3 .	Kanka.
3-5.	Dar ś aka.	24.	Sitadhvaja.
6.	Subandhu.	25.	Indu.
7.	Jiş ņ u.	26.	Nala.
8.	Bala.	27.	Satadhanus.
9.	Susarman.	28.	Sālva.
16.	Bhùridhāman.	29.	Prthudhvaja.
11.	Pā ņ dya.		Jrmbha.
1 2.	Surāstra.	31.	Pradyota.
13.	Suketu.	32.	Babhru.

- IV. 1-4. Description of the Assembly.
 - 5-41. Subāhu's speech: He asks the King to prepare for battle and mentions individually the members of the audience, viz., Suśarman, Drdhadhanus, Bala, Nala, Gada, Pāndya, Protha, Kirmīra, Kanka, Kṛpa, Yavana, Surāṣṭra, Andhrā, and Indu.
- V. 1. The Council of War is still sitting after the speech of Subāhu, and the Kings are again mentioned by name:—

- 2. Nala. 8. Bhūridhāman.
- 3. Susarman. 9. Karandhama.
- 4. Krpa.
- 5. Yayana. 11. Rukmin.
- 6. Satadhvaja.
- 12. Bhima.

Nala.

- 7. Gada.
- 13-14. Bhismaka.
- 15-42. Bhismaka addresses the assembly and proposes that a messenger should be sent to Prasenajit before any action is taken against him.

10.

- 43-45. King Kapphina approves.
- 46-48. Darsaka is chosen as the messenger.
 - 49. He sets out on his errand.
- 50-51. A Vidyādhara, Vicitrabāhu by name comes and implores King Kapphina to accompany him to the Malaya mountain. The King accedes to his request and goes with his royal camp to his friend, Vicitrabāhu.
- VI. 1-9. King Kapphina sees the mountain Malaya.
 - 10-84. Vicitrabahu describes the loveliness of the mountain
- VII. 39. The description of the encampment in which the Vidyādharas help the followers of King Kapphina in their preparations.
- VIII. 1. The six seasons appear simultaneously on the mountain, and they are described:—
 - 2-15. Vasanta (spring) 37-48. Sarat (dewy autumn).
 - 16-23. Grisma (summer) 49-54. Hemanta (autumn).
 - 24-36. Varşā (rains) 55-59. Śiśira (winter).
 - 60. A general description of the seasons.
- IX. 40. The description of the amusements of the king's attendants who are gathering flowers in the forest.

- X. 38. The description of their enjoyment of water sports.
- XI. 37. A description of the sunset.
- XII. 1-21. A description of the rising of the moon.
 - 22-47. The women make their toilet.
- XIII. 40. A description of drinking parties.
- XIV. 40. A description of amorous sports according to the Kāmašāstra.
- XV. 1-34. The dawn is described.
 - 35. King Kapphina awakened by the sweet eulogies of the minstrels leaves the abode of his friend Vicitrabahu and returns to his capital.
- XVI. 1. Drašaka reaches šrāvastī.
 - 2-10. Description of srāvastī.
 - 11-12. Darsaka received by King Prasenajit.
 - 13-23. Prasenajit enquires contemptuously the purpose of his visit.
 - 24-39. Daršaka delivers his message.
 - 40-53. Prasenajit becomes angry and declares that he would rather go to war than submit to Kapphina.
 - 54-63. Darsaka very much enraged urges Prasenajit to reconsider his decision.
 - 64. He returns to his country.
 - 65. The effect of the reply from Prasenajit on the camp of King Kapphina is described again and the following kings are cited:—
 - 66. Raghu.

76. Bala.

67. Asmaka.

77. Sura.

68. Kukura.

78. Sauvīramalla.

69. Niṣāda. 79. Kadambaka.

70. Mucukunda. 80. Aja.

71. Sahadeva. 81. Manu.

72. Prasāda. 82. Śruta.

73. Surandhra. 83. Dhundhu.

74. Indu. 84. Ruru.

75. Madraka. 85. Aņu.

86-92. A description of the dejection of the warriors, wives as they contemplate the separation from their husbands who must go to war.

93-95. The army sets out for war.

XVII. 1. Kapphina gets enraged.

- 2-46. Paraphernalia of battle are described, including the infantry, the cavalry, the chariots and the elephants.
- 1-10. The army of King Kaphina attacks Prasenajit's forces. King Kapphina's warrior's are distinguished by name:—Yavana(2), Surandhra (4), Raghu (6), Protha (7), Gada (9), Kukura (10).
 - 11. King Kapphina watches the progress of his army in battle. The heroes of the battle are again mentioned:—

Indu (13), Bala (14), Pāṇḍya (16), Yugandhara (18), Babhru (19), Bhūridhaman (21), Karandhama (23).

- 29-34. King Kapphina encourages his army.
- 35-42. Prasenajit becomes furious and attacks the army of King Kapphina.
 - 43. Kapphina is dismayed to see his army thus harrassed by Prasenajit.

- 44-70. Kapphina routes the forces of Prasenajit.
- 71-75. Prasenajit is unable to withstand the attacks of Kapphina's forces. He prays to the Buddha for help.
- 76-80. The Buddha appears and subdues Kapphina, who is rendered helpless on account of the miracles worked by the Master. King Kapphina acknowledges his need for the help of the Master and entreats him.
- XIX. 40. King Kapphina receives the instruction of the Buddha.

 XX. 1—19 ab. The teaching of the Buddha continues.
 - 19 cd—22. King Kapphina requests the Buddha to initiate him as a monk.
 - 23-32. The Buddha advises that King Kapphina should wait until the time for him to renounce the world has come, and that he should, till then, continue to rule his kingdom for the benefit only of the Buddha, the Dharma, and the Sangha.
 - 33. The Buddha vanishes.
 - 34. King Kapphina retires to his capital and continues to rule there according to the advice of the Buddha.
 - 35-38. The Prasasti.

ABSTRACT OF THE POEM.

I.

Sivasvāmin, the author, opens his poem invoking the blessings of the Buddha, possessed of the ten powers, with the description of a town Līlāvatī by name, situated on the banks of the Narmadā in the Vindhyas. The prosperity of this town was

obvious from its many beautiful buildings whose silken banners kissed the sky. From the grandeur of its crystal palaces with golden domes and jewelled windows one could imagine that it was either the goddess Kāli or the royal Goddess of Glory incarnate. Sublimity, grace and strength were combined in its architecture.

Its ruler, King Kapphina, was tall, brave and adventurous, and had a large following of vassal chieftains. He was Siva personified, who by the mere sound of his voice could put his enemies to flight and whose fame had spread in all directions. His skill in wielding his sword was known to his enemies whose cities lay in ruins. He governed his kingdom according to the rules laid down in the books of Politics and employed spies to enquire into the state of affairs both at home and abroad.

II.

Once a spy, who had been sent to the North, returned to the Royal Assembly of King Kapphina reporting that there was a king by name Prasenajit, who ruled over the thriving kingdom of Kosala. "Prasenajit" he said, "is loved by his subjects as he possesses all the virtues of a noble ruler, glories in his powers, and entertains a feeling of enmity towards you."

The poet gives an impressive description of Prasenajit, a contemporary of the Buddha, and his capital Śrāvastī, a favourite resort of the Buddha. When the messenger reaches Śrāvastī (XVI Canto) the poet's description of the town and of the King bears witness to his love for both.

III.

On hearing from the messenger of the hostile attitude of Prasenajit the whole assembly becomes greatly enraged. Thirty-eight Chieftains are mentioned, all exhibiting their fury—tearing off their bracelets, wringing their hands, perspiring, and uttering menacing words. Of these Subāhu, Darsaka and Bhīsmaka are of importance for their part in the later story, while the names of

Pāndya, Surāstra, Andhra, and Utkala refer to the territories over which they ruled.

IV.

The poet describes the great tumult in the assembly hall. In this atmosphere of great tension Subāhu begins a fiery speech which shows that he was well versed in the science of politics, as he points out with sound arguments that the only course of action left for King Kapphiņa is to wage war at once against the enemy. To add weight to his arguments, he points to the members giving an epithet to each. He says that formidable Susarman, furious Dṛḍhadhanus, powerful Bala, and others can brook no further humiliation. Finally he taunts them by saying 'Do you stay here. I will fight the enemy alone.' This rouses their enthusiasm. At the close of his speech he is loudly applauded.

V.

Before the Council of War adjourns another Chieftain, Bhismaka, stands up and supporting the motion proposed by Subāhu suggests sending a messenger to Prasenajit, the hostile King, as a necessary measure before actually going to war. The anger of King Kapphina, who was very much enraged, is assuaged and he gives his approval to the idea. Daršaka, another member of the audience, is selected as messenger to Prasenajit. The import of the message is not given, but it is implied that the hostile king must either pay homage to King Kapphina or suffer an invasion. It is an ultimatum. The King by a gesture orders the messenger to proceed on his errand and he at once sets out on his journey to the North

So far the poet has been following the traditional Avadāna of Kapphiņa current in his time. At the same time, since he claims to be a writer of a Mahākāvya, he must describe mountains, seasons, etc. He, therefore, introduces a demigod, or a Vidyādhara, Vicitrabahu by name, a friend of King Kapphiņa, who invites the latter to his abode in the Malaya mountains. The

king agrees to the proposal and follows his friend with all the paraphernalia of a King of India of the 9th century, including the harem and the army.

VI.

The description of the mountain Candanācala in this canto is consistent with the vast grandeur and the majestic scenery of the Himalayas which this poet knew very well. The poet's imagination nurtured in that abundant luxuriance of nature takes in long vistas and covers vast regions. Each stanza has one theme to describe and the poet each time exercises his imagination to such an extent that the description to the Western mind appears exaggerated and too artificial. The poet focuses his attention on one subject which he is going to describe and tries to see it from different angles of vision.

This scheme runs throughout the Canto and the metre changes with the shifting of the scene and the its dignity (of the metre) varies according to the lostiness of the subject.

The glowing mountain appears to the poet as a huge mass of fire fanned by fierce winds. It has ravines and precipices where the trees are alive with the warbling of delighted birds. The lofty snow-clad peaks remind the poet of the ocean rising to clasp the moon. The arbours and the elephants, the gold coloured peaks at sunset, the verdant plateaux attract his attention. He fancies that the sun seems to rest there for a while to cool itself.

Then the King's friend, Vicitrabāhu, who is more familiar with the place begins to describe its particular features. Here we are told of its richness in flowers and the brilliance of its outcropping minerals. Then follows a description of the wild animals roaming about the penance groves, of ascetics, of cowherds and their huts, of lotus ponds, and of chirping birds. In Stanza 23, the Vidyādhara compares the mountain to the sublime and calm image of the Buddha with the right shoulder covered.

The king's friend then proceeds to describe the crystalline walls used as mirrors by clestial ladies, the sweet smelling grass, fragrant flowers, sandle-woods, music of Kinnara Ladies, and the calls of cuckoos. A reference is made to the Buddha; and the mountain is compared to the Indra and the Bodhisattva (Stanzas 46, 57, 59.) The heaps of bones of Nāgas are pointed out in Stanza 61. The Ideal of an Arhat with the several methods of attaining it form the subject of the 65th verse while Bodhi is mentioned in verse 69.

VII.

The king with an army consisting of elephants, horses, chariots and soldiers, and accompanied by the ladies of the harem, wishes to pass some time on the Mountain Candanācala. All preparations for laying out the camp are made with the help of the Vidyādharas. Tents are pitched, huts are built, arrangements for the kitchen are made, and the ladies of the harem are well housed.

The elephants and horses are taken to ponds to bathe and the camp looks delightful.

VIII.

The six seasons simultaneously appear on the mountain to honour King Kapphina. There is spring, when mango groves, Vakula trees, saffron plants, and Navamālikā creepers put forth sweet fragrant flowers. There is summer when peacocks hide themselves under their plumage, and when the men in the camp enjoy the breeze of fans in pleasure huts. There is the rainy season which depresses the ladies whose husbands are abroad as the sweet but melancholy notes of peacocks reach their ears and the rumbling noise of the clouds rends their hearts. There is autumn when the water in the ponds becomes limpid and lilies smile brightly. There is dewy autumn when the nights are clear and the moon shines pleasantly. That is the time when Ketaka plants blossom and paddy fields ripen. There is the winter season when snow

destroys the charm of lotus ponds. Everywhere it is desolate and dreary, and the Nameru trees with leaves yellow and sere are seen here and there.

IX-XV.

Men and women in the King's camp on the mountain are tempted by the abundance of flowers and the charm of the seasons to pluck flowers and enjoy the company of their beloved in that pastime. When they are tired and overcome by the heat they bathe in the cool ponds and streams which are full of lilies and lotuses. They frolick about in the water. The waters of these streams are tinted with the toilet powders of these ladies. People say their evening prayers as the lotuses close. The parties of men and women retire to their rest-houses as the moon rises. Preparations are made by the ladies for the drinking parties which are attended with great mirth. The ladies wear ornaments to add beauty to their lovely limbs. Messengers move about carrying news from the lover to the beloved. Then begin the amusing scenes of enjoyment as the goblet passes from one to another, each vying with the other to excel in coquettish behaviour. When drunk they retire to rest. The poet here indulges in amorous and erotic descriptions. When it is morning and the sun begins to chase the gloom of darkness, when stars begin to disappear, and lotuses begin to bloom, when the bees again buzz about in the lotus ponds, when Brahmans begin to perform their morning ritual, and the sacrificial fires rise up to the sky, the bards sing the praises of King Kapphina to awaken him.

King Kapphina wakes up and having fully enjoyed the hospitality of his friend, Vicitrabahu, retires to his capital, Lilavati, where he has been long expected.

XVI and XVII.

Here the poet takes up the story which he had left unfinished at the end of the Fifth Canto.

Darsaka, who had been sent as an envoy to Prasenajit, reaches Srāvasti, where he sees that the houses are made of precious stones, that the people practise righteousness and that Māra has no influence over them, and that the evil influences of the Kali age are no longer to be felt, and that there are many Buddhist monasteries, Vihāras and Caityas. The city indeed looks as if it were presided over by the Buddha himself.

He is received by the Chamberlain as he enters the Palace, and is introduced to Prasenajit who in a scornful tone enquires the object of his visit. Daršaka delivers the message of King Kapphina which provokes Prasenajit very much. Prasenajit is furious and declares that he will not submit to Kapphina and that the proper reply to his message would be an army ready for battle. Daršaka gives his parting advice to Prasenajit and withdraws to his own city. When he conveys the reply from Prasenajit to the allies of Kapphina their anger is unbounded. Great confusion and a spirit of high tension are evident as was the case when Daršaka was sent to Prasenajit. Preparations for war are soon undertaken and the warriors arm themselves and march against Prasenajit. The chariots, the cavatry, and the elephants are at once arrayed to march against the enemy.

XVIII.

A dreadful battle ensues in which the army of Pāasenajit is put to flight. He finds himself helpless and prays to the Buddha for help. He appears and by means of a miracle changes the mind of Kapphina.

XIX-XX.

King Kapphina hears a sermon of the Buddha and expresses his desire to enter the order of the Buddhist monks. The Buddha advises him not to renounce the world but to practise selflessness in the discharge of his duties as the ruler of his kingdom. The Buddha disappears and King Kapphina retires to his kingdom.

THE AUTHOR.

His name: Kāśmrīabhatta Sivasvāmin.

Bhatta i in modern Kashmiri is 'bata', a brahman, a Kashmiri Pandit, all of whom are Brahmans. It is derived from the Sanskrit word 'bhartr' which in Prakritic form gave Bhatta. The latter has been retained by the Sanskritists, and appended to the proper names in the beginning or at the end. It was used in the sense of 'learned'. Some of the important instances Bhatta Nārāyana, the author of the Venīsamhāra. are Mammata Bhatta, the author of the Kāvyaprakāsa, Kumārila Bhatta, the learned philosopher of Southern India. But mostly it is found affixed or prefixed to the names of writers from Kasmīra, as a title given to a learned Brahman or a great teacher.

In the Kapphinabhyudaya (XX.36: 37) the author has written Srisivasvāmin and Sivasvāmin as referring to himself. Both of these names with and without the Sri are found in the Anthologies.

The Name of the Poem.

Sivāsavāmin probably chose the name of his poem on the model of his predecessor Sankuka's work the Bhuvanābhudaya 2. now lost to us. The title 'abhyudaya' has been often used to name the works which celebrate the deeds of great heroes. viz. Puşpa sena's Dharmasarmābhyadaya, Jinasena's Parsvābhyudaya, and Venkatesa's Rāmābhyudaya. .

His date and Contemporaries.

Ancient Kāśmīra was known among the Pandits of Northern India as the abode of sarada, the goddess of learning and this

belief was not groundless in that it contributed very much to the mass of Sanskrit learning. Among the outstanding poets and writers on poetics one may refer to Rātnākara, Anandavardhana, Mammaṭa, Bilhaṇa, Ksemendra, and Kalhaṇa. In the famous Rājataraṅgiṇī of Kalhaṇa, edited and translated by Stein, one finds the names of other writers whose works are lost, such as Sankuka.

Ratnākara lived under two kings, Jayāpīḍa and Avantivarman. Avantivarman (855-83 A. D.) was a great patron of of learning. In the Rājataranginī ¹ Chap. V we have:—

- "The Minister Sūra by honouring learned men with a seat in the King's Sabhā, caused learning, whose flow had been interrupted, to descend again upon this land (32)".
- "The Scholars who were granted great fortunes and high honours proceeded to the Sabhā in vehicles (litters) worthy of Kings" (33).
- "Muktākaņa, Śivasvāmin, the poet Ānandavardhana, and Ratnākara obtained fame during the reign of Avantivarman" (39).
- "In the time of Avantivarman the illustrious Bhatta Kallata and other holy men (siddhas) descended to the earth for the benefit of the people" (66).

Ratnākara wrote his voluminous Mahākāvya, the Haravijaya, in fifty Cantos. In that work, his exquisite language, his command of style in all its varieties, his ability to use various metres, his art of making the sound correspond with the sense, his full knowledge of Saivā philosophy, and his mastery of Nītiśāstra, Kāmasūtras, Epics, and the Purāņas, make him stand unique among the writers of Kāvya and testify to his being a true successor of Kālidāsa, Bhāravi, Māgha, and Bāņa.

1 See Stein's Translation of the Rajatāranginī.

Anandavardhana belonged to that school of poetics which held that suggestion was the soul of poetry. As a matter of fact by writing the Dhvanyāloka he put that theory on a firm footing.

Kallața wrote commentaries on Spanda and Saiva-sūtras.

To this galaxy of writers in the times of Avantivarman belonged Sivasvāmin, the writer of the Kapphinābhyudaya.

To write a Mahākāvya, by Sivasvāmin's time, had become the indispensable condition of greatness of a poet and that Sivasvāmin, from all evidence a Saiva, should have delved deep into Buddhist tradition and thought and should have celebrated a Buddhist Legend in a work of such a major importance is evidence not only of the influence exerted over him by his preceptor Candramitra, nor only of the tendency to incorporate the Buddha in the hierarchy of 'avatāras', but also of the receptive nature of the poet's mind which refused to be hide-bound by narrow orthodox Brahmanism but thirsted to explore fresh fields and pastures new.

Ratnākara, a 'śaiva' to the core, had celebrated the exploits of śiva, ś.vasvāmin's own ideal; Māgha a Vaiṣṇava in thought and spirit had sung the overmastering triumph of Lord Kṛṣṇa over his arch-enemy, Ṣiśupāla; but Śivuśvāmin, with a boldness characteristic of him, hit upon a theme entirely new in thought and spirit, and surpassed them by celebrating not so much the heroism of the victor or the degeneration of the vanquished as the triumph of the very soul over life's ambitions. And to do this he turned for inspiration, light and guidance to the core of a religion where reason and devotion are mingled in such a pleasing and appealing combination.

^{1,} Kashmir Saivism by J. C. Chatterjee, 1914,

Sivasvāmin, Ratnākara and their predecessors,

Sivasvāmin, as he was a successor of the great writers of artificial Sanskrit poetry, has combined in him all the merits and demerits of such writers, chiefly Bhāravi, Bhaṭṭi, Māgha, and especially Ratnākara. The opening of his poem is after Haravijaya, the introduction of a spy from the north follows that in Bhāravi, the description of the mountain is common to them all, the appearance of a Vidyādhara resembles that of a Yakṣa in Bhāravi and Dāruka in Māgha. In the Sixth Canto he very closely imitates Māgha even in the scheme of metres. Māgha has in the beginning of the Fourth Canto, eighteen upajāti verses. These are followed by verses every third of which is a Yamaka; while Sivasvāmin has the first twelve verses of the Sixth Canto in Upajāti metre, these being followed by other in which every second verse is a Yamaka. In the nineteenth Canto, which can be read as Sanskrit as well as Prakrit, he has followed Bhaṭṭi.

Bhāravi employed the word Lakṣmī, Māgha used the word Śrī, Ratnākara has Ratna and Sivasvāmin Siva in the last verse of every Canto. The Prasasti is found at the end of the works of

Māgha, Ratnākara, and Sivasvāmin.

Author's Motive in writing the poem.

Sivasvāmin wanted to write a Mahākāvya, and in doing so he has very closely followed the instructions of Danqin, the writer of the Kāvyādarśa¹ who probably wrote in the 6th century.

The subject of the poem is taken from an old narrative. The hero is noble and adventurous. Ministers assemble and spies take part in discussions on state affairs. Descriptions of mountains, of the seasons, of the sunset and of the rising of the moon, of drinking and amorous dalliance, have their due place. The hero's campaign, his war with the enemy, and his final triumph bring us to the end of the poem which is full of sentiments, emotions and effective transitions. In the use of metres the poet follows the rules. Each Canto is written in a single metre with a change of metre in the last one or two Stanzas.

⁽¹⁾ See Kāvyādarša 1, 14-49.

As a matter of fact our poet has taken the word Abhyudayam from the text of the Kāvyādarsa, 'which he very closely follows in his illustration of the "citra kāvya" in VI and XVIII Cantos.

It also seems that the poet meant to narrate allegorically the story of the human soul which has been slumbering and has been allured by the temptations of the world and which is at last awakened by a sudden shock or some outstanding event, as it was in the case of Asoka and the Buddha himself.

We might say that the conversion of Kapphina represents the enlightenment of such a soul. Here this Mahākāvya may be compared with the Buddhacarita and the Saundarānand of Asvaghoşa.

The poet's account of himself.

From the "prasasti" which comes at the end of the Kap' phinabhyudaya we gather the following information:—

- i. Sivasvāmin was the son of Bhaṭṭācāryasvāmin and he wrote this poem, the Kapphiṇābhyudaya, which he calls 'Sūktāsūktiḥ' at the instance and encouragement of the Budhist preceptor, Candramitra. He talks of him in the past tense (aorist past "abhūt"). He might have come in contact with this religious teacher who asked him to show his talents as a poet in writing the poetic version of the Avadāna of Kapphiņa (XX. 35, 36.)
- vi. The poet dedicates the whole poem to Siva (XX. 37) which fact shows that he was not a Buddhist by faith, but that he was well versed in that Religion and could write on that subject. At the same time, from a religious point of view, he presents a state of affairs which is a compromise. His poem serves to show the process of absorption of later Buddhism by Saivism and Vaisnavism.

^{1.} See Kāvyādarsa, I, 14-19.

iii. In the last verse (XX. 38) he glories in his work which he says is a lamp lit to remove the darkness of ignorance and which is also meant to stop the prattling of the poetasters.

"Sivasvāmin of noble deeds, the mere hearing of whose muse produced wonder in the hearts of the wise and stopped his opponents' eagerness to speak, lit the lamp of this poem for the benefit of the righteous to remove the darkness of ignorance". (XX, 38).

He does not mention that he flourished at the Court of King Avantivarman, like his contemporary Ratnākara, but this much is certain that he does allude to his contemporaries when he mentions 'Virodhinām'—opponents in the field of poetry.

Sivasvāmin and Buddhism.

In the Kapphinābhyudaya (XX, 15) the Buddha preaches a sermon on the Hetumālā or (1) the chain of twelve links which ties a person to bondage, and lays stress upon the achievement of salvation by detachment from the things of this world (XX, 18 cd.) (rāgatyāgānmuktirahnāyakāryā). Here the author has followed the Avadānasataka and at the same time tried to harmonise the spirit of Buddha with the Hindu view.

King Kapphina having heard the sermon of the Buddha at once exclaims:—

प्रोचे राजा जातिचत्तप्रसादो दीचादचोदिचागोदाक्षिगात्यः अत्रोदीर्ग दीर्गमान्थ्यं ममाक्ष्योः अप्याकस्मादिस सुप्तप्रबुद्धः आमिर्मर्तुभारतीमिस्तवाहं मग्नोन्मग्नः सम्यगम्युद्धतोऽस्म २०,१९,२०.

⁽¹⁾ cf. Ye dharmāh hetuprabhavah hetum teṣām tathāgato hyavadat, teṣām ca yo nirodha evan vādī mahāsramanah.

The courteous Southern King whose mind was calmed, spoke, 'With this speech of yours the blindness of my eyes is gone. I am awakened suddenly from sleep. By these words of the Master I who was deep drowned am absolutely saved.'

If we compare these words of King Kapphina to those of Arjuna in the Bhagavadītā (18.73), we find a very close resemblance.

Arjuna says-

नष्टो मोहंः स्मृतिर्लब्धा त्वत्प्रसादान्मयाच्युत स्थितोऽस्मि गतमंदेहः करिष्ये वचनं तव

"Delusion is destroyed. I have obtained Memory by thy grace, O Imperishable. I am firm and all my doubts have passed. I will do your word."

King Kapphina expresses his desire to adopt the life of a monk, but the Buddha says—

सत्यं सत्यासत्यदृष्टी सुदृष्टिः

पात्रं पुत्र स्वादशः भिक्षुवृत्तेः

कालस्वस्यास्ते प्रतीस्यः किया-

नायातीह प्राप्तकाला हि सिद्धिः

"It is true, my son, that you should desire to be a Bniksu having realised what is true and what is false. But you should wait for that stage of life. That accomplishment comes at its proper time".

Does not the poet refer to the four stages in a man's life according to Manu? He does not want the King to enter a monastery but makes the Buddha ask him to wait for some time.

But great emphasis is laid upon leading a life of selflessness as we find in the Gitā. The Buddha asks him to rule his

kingdom for the three Jewels, the Buddha, the Dharma, and the Sangha.

मा भोगेभ्यो भद्भुवेभ्यः प्रकृत्या मा प्राग्रेम्यो मा श्रिये मा ययोभ्यः श्राद्धः श्रद्धः श्रद्धया याधि साधा पृथ्वीरत्नं प्राज्यरत्नत्रयार्थे ॥ २०,२६ धर्मे श्रद्धा सम्मतिः सत्यसारे दान त्रीये सम्प्रधानं दयायां श्लान्ती चोभः प्रेम पुराये च येषां नीतं मुक्तास्ते गृहस्थाश्रेम ऽपि २०–३२

'Neither for enjoyment which is transitory by nature, nor for your own life, nor for glory, nor for fame, must you govern the Jewel of the Earth, but with faith, purity, and devotion for the benefit of the three Jewels—the Buddha, the Dharma and the Sangha.'

'Those who have faith in the Law, who follow truth, who have courage in generosity, who have eagerness for compassion, who desire to be ratient, and have love for Righteousness, achieve Salvation even though they are householders.'

These verses point towards the doctrine of Anāsaktiyoga of the Bhagavadgītā where the belief in leading a selfless life is preached.

This shows how much the later Buddhism was influenced by the rise of the Orthodox Hindu faith and shows the reason for the Kashmir compromise between Hinduism and Buddhism.

⁽¹⁾ See Stein, Rājatarangiņi J, 9, 76, 92; II, 355.

Did Sivasvāmin write any other work besides the Kapphinābhyudaya?

As referred to in the Kavindravacanasamuccaya, Bhandarkar's Report, (1897) on p. xi, has the following anonymous verse in praise of ivasvāmin:—

वाक्यानि द्विपदीयुतान्यथं महाकाव्यानि सप्त क्रमात् त्र्यचप्रत्यहानिमिर्तस्तुतिकथालचाशिं चेकादश कृत्वा नाटकनाटिकाप्रकरगप्रायान् प्रवन्धान् बहून् विश्रामत्यधुतापि नातिशायिता वागी शिवस्वामिनः

"Not even now does Sivasvāmin's unsurpassed Muse find rest though he has composed seven Mahākavyas which have dvipadīs; has written eleven lacs of hymns to Siva every day, and several other works, Nāṭakas, Nāṭikas and Prakarņas.

This verse is also found quoted in a footnote on p. 132 of the kavikanthābharaņa (Kāvyamālā, 4).

In view of this eulogy Sivasvāmin seems to have written many works. But the ravages of time have left to us only the Kapphinābhyudaya and the verses in the Anthologies, which are attributed to Sivasvāmin. Let us hope that further search for manuscripts in India may bring to light some more of his works.

But on p. XXIX of Bühler's Report 1877 we have a reference to Sivasvāmin who enlarged kalādikṣā, a treaties on Saiva philosphy. On p. 620 of J. R. A. S. for 1912 the authorship of the Ms. No. 67 of Stein's Collection deposited at the Indian Institute, Oxford, has been ascribed to Srisivasvāmin. On examination of this Ms. with the kind permission of Sir Aurel Stein it was discovered that the compiler of the Catalogue had misunderstood the statement in the colophon of that Ms. which runs:

iti śrinandiśvarāvatāre śrīśivasvāminoktam Sandhyāmāhat-

myam iti bhadram (in Śāradā characters). The book is in the form of a dialogue between Devi and Brairava, which words are synonymous with Pārvatī and Śiva. In the colophon the writer means here ends the Sandhyāmāhātmya as told by Śri Śivasvāmin (i. e., by Lord Śiva) to Devī. This Śivasvāmin has, therefore, nothing to do with the author of the Kapphinābhyudaya.

THE SOURCES OF THE POEM.

The story of Kapphina, or Mahakapphina, or Kapphina the Great, or Kapphina the Elder, is found in the Avadanasataka in the Manorathapūrani, which is a commentary on the Anguttara Nikāya, and in the commentary on the Dhammapada

Synopsis of the Three Stories.

(1)

The Avadānasataka.

Kapphina in one of his previous births was contemporary with Vipasyl and built a Vihāra. He was, then, known as Brahmadatta, King of Benares, when he served a Prateyaka Buddha, and, in the time of Kusypa, he achieved complete control of his senses. In the time of Sākyamuni he was known as the son of Kalpa, a King in Southern India. When he was in power he sent an insolent message to the rulers of six cities, Śrāvasti and others, in Northern India, that they must submit to his rule. The rulers of those cities took refuge under the Buddha who appeared on the scene and converted King Kapphina who had come there under the command of the Buddha. He was then raised to the status of an Arhat.

(2)

The Manorathapūraņi.

In the days of the Padamuttarabuddha, Kappina, in a previous birth lived at Hamsavatī, and in the time of the Kässapasammāsambuddha wasb orn at Bārānasī.

In the time of the Buddha he was born at Kukkuṭavatīnagara as King Kappiṇa and his wife Anojā who had desired earnestly in her previous birth when she was the wife of King Kappiṇa, (who was then the chief householder in Bārānasī), to be so named.

King Kappina heard of the Law, the Buddha, and the Sangha from merchants who visited his country. He renounced his kingdom and went forth to meet the Buddha, who foreseeing Kappina's attitude had stationed himself on the bank of the Candabhāgā. King Kappina with his followers crossed the Gangā and another river before he came to the Candabhāgā, where he met the Buddha, who converted him to Buddhism. His quan, Anajā, when she heard of her husband's renunciation followed in his footsteps and came to the Buddha who converted her as well. One day Mahākappina was heard saying, 'Oh happiness! Oh happiness!' The manks concluded that he was thinking of the happiness of his kingdom, but the Buddha told the monks that it was the happiness of drinking of the Law and he recited the 79th verse of the Dhammapada.

'He who drinks of the Law lives happily with a serene mind In the Law preached by the noble, the sage ever finds his joy'.

The Dhammapada Commentary (1).

Kappina, in his previous birth, was a contemporary of the Buddha Padmuttara. In another birth, as a head weaver

⁽¹⁾ See 'Buddhist Legends' by E. W. Burlingame (H. O. S.), Vol. 28, P. 101, Vol. 29, P. 167.

he served a thousand Paccekabuddhas. In the time of the Buddha Kassapa he was the senior householder at Benares where he and his community presented a monastery to the monks. His wife presented Anojā flowers to the Buddha.

This Community of householders is born in Kukkuṭavatī and their senior is King Kapp na whose wife is Anojā. King Kappina and the courtiers, Queen Anojā and her ladies-in-waiting, hear of the Buddha, the Law, and the Order, and they set out to visit the Buddha. They cross three rivers the Aravacchā, the Nīlavāhanā, and the Candabhāgā before they meet the Buddha who expounds to them the Law and they retire from the world.

The elder Kappina is found rejoicing and saying 'Oh happiness?' The monks think that he is reminded of his former happiness as King. The Buddha tells them that it is the happiness of the Nibbāna and recites the 79th Stanza of the Dhammapada.

The same story with very minor differences from the one given above is translated by T. Rogers in his Buddhaghosa's Parables, pp. 78-85. Its summary may be given as follows:—

There hved near Benares a thousand weavers who served a thousand Pacceka-buddhas with food and drink and built monasteries for them. They were reborn in Benares in families of wealthy men and pleased Kassapa who was then preaching the Law. Afterwards they appeared in the Nat country, and in the time of the Gotama they were born in the country of Kukkuvatī. The head weaver's wife was the daughter of the great king of the Sāketa country. Five hundred merchants came from the country of Sāvatthī and informed the King of the 'Three Jewels', the Buddha, the Dharma, the Sangha. The King was filled with devotion and joy when he heard of the 'Three Jewels'. He renounced his kingdom and set off on his journey to the place where 'The Jewels' were found. He crossed the Avarakka, the Nīlavāha

and the Kandāpa rivers. On the other side of the Kandāpa river he met the Buddha who expounded the Law to him and made him a Sōtāpanna. The Queen also, with her attendants, was admitted into the Order.

Thus we possess two versions of the legend of Kapphina as preserved in the Sanskrit Avadānasataka and the Pāli commentaries. In the former King Kapphina is said to have ruled in the Dakṣināp tha and in the latter at Kukkuṭavatī, whose geographical position has not yet been ascertained. In the Avadānasataka Kapphina invades Śrāvastī, when he is converted to Buddhism by a miracle; while in the Pali versions he voluntarily renounces his kingdom.

Sivasvamin following the version of the Avadānasataka in writing his Kapphiņābhyudāya has introduced many changes and that with evident reason. The deviations from the legend in the Avadānasataka are:

- (i) King Kapphina is informed by a spy that Prasenjit, ruler of Srāvastī is hostile towards him. He holds a Council of his allies who decide that an embassy should be despatched to Prasenajit asking him to make submission to him. Otherwise war will be declared. (Kapphinā. 1-V).
- (ii) The digression which follows is introduced to conform to the rules of writing a Mahākāvya.
- (iii) The envoy goes to Prasenajit who refuses to submit.
- (iv) War is declared and the two opposing armies engage in a fierce battle.
- (v) The Buddha appears on the scene as the result of the prayers of Prasenajit who is unable to withstand the advance of the enemy. The Buddha changes the mind of King Kapphina with a miracle. He preaches to

him the Law, but when requested by King Kapphina to initiate him into the order, he refuses to do so but admonishes him to practise selflessness in the discharge of his duties as the ruler of his kingdom.

(vi) Queen Anojā is not mentioned by Sivasvāmin.

The first four of these departures from the original, are due to the regulations for writing artificial Sanskrit poetry of high standard, while the fifth one shows the influence of the Hindu ideal of life as found in the Laws of Manu. The doctrine of 'Non-attachment' in the pursuit of one's duties finds full adherence by sivasvāmin. The Buddhist ideal of monkhood is replaced by that of a householder, who seeks salvation by doing his duties in a spirit of self-renunciation. Silence about Anojā also shows the tendencies of the time which preferred a honoseholder's life to that of a monk.

The Name Kapphina.

M. Burnouf in the Lotus (1) suggested Kampilya as the locality which gave rise to the name, He gives various readings of the name as found in the Buddhist Sanskrit works.

(1) Le Lotus de la Bonne Loi. pp. 1, 294.

The readings are "kapphilla", "kaphina", "kaphina", "kaphina", and "kachphila".

In Chinese Kapphina or Kamphilla has come to be associated with the Constellation Scorpio and is suggested that Kappina was so ca'led because he was born in answer to prayer address-

ed to the Begent of Scorpio. (2) M. Sylvain Lévi (3) has given Kosala and Kipin under the Naksatra Rohini.

With regard to the association of the word Kapphina with

Kipin of Kapin or Kophene I have to make one suggestion:

i. In the Pāli texts (*) the King is said to have crossed the Candrabhāgā before he met the Buddha. This shows that he must have came from the North if the Candrabhāgā is the modern Chenab of the Punjab. His personal features, especially the Aryan nose, also resemble that of a man from the North. (5)

cf. Do you see that monk coming to us, pale, thin, with

prominent nose.'—Kindred saying II. pp. 193-4.

ii. Kipin or kapin may denote the kingdom of Kāśmīra (*) and the poet Sivasvāmin may have chosen a theme by which he could sing the glories of Kāśmīra as well as that of Kapphina, one of the twelve great disciples of the Buddha.

Derivation of the word Kapphina.

Akamuna, a dictionary of Buddhist names, gives Mahākappina (Skt. Mahākalpina). In the Avadānaśataka he is said to be the son of King Kalpa (lit. a cycle of time). Kalpin will therefore mean 'one lasting an aeon.' Kalpa also means 'competent'. It is befitting that one of the foremost disciples of the Buddha should be so named, unless we take the name to refer to his kingdom Kophene or Kipin or Kapin. (') The Lalitavistara has Kaphila and Kashphila. (*)

In later Sanskrit Literature when the Kapphinabhyudaya was referred to we find many variants for the name Kapphina.

- i. In the footnotes on page 202 of the Vyākhyāsudhā, a commentary on the Amarrkośa, we have 'Kathitābhyudaye', due to the ignorance of the exact word.
- ii. In the Țikāsarvasva we have 'Karpi', 'Kacchi' and 'Kalpi' on pages 18, 132, 132 respectively.
- iii. In one of the India Officie Manuscripts, No. 541, p. 118, of the Padcandrikā of Rāyamukuṭa it is written as Kaṣphina.
- iv. In the Manorama of Ramanatharai we have Kaphila.

If we derive it from klrp, the aspirate in 'Kapphina' is inexplicable, unless there were such a word as 'kaspina', which would give Kapphina like 'puppha' 'nipphala from 'puspa' and 'nisphala.'

King Kapphina and Barabudur.

In Professor Krom's 'Barabudur' one finds that the reliefs on the second main wall of the Barabudur temple in Java follow the text of the Gandavyüha, a Buddhist Sanskrit work. Mr. B.C. Shastri, M. A., M. O. L., in his article in Bijdragen tot de Taal., Land—en Volkenkunde Van Nederlandsch—Indie, Deel, 19, Afl. 1, pp. 173-81, has tried to supplement Professor Krom's identification of this text. According to him the following text of the Gandavyüha is carved on the Second relief:—

न च तं महाश्रावकाः शारिपुत्रमोद्गेल्यायनमहाकाश्यप-रैवतसुभूत्पनिरुद्धनन्दिकष्किशकात्यायनपूर्श-

मैत्रायगापुत्रप्रमुखा बतवने तथागतविकुर्वितमद्रासुः

The Śrāvkas headed by Śāriputra, Maudgalāyana, Mahākāsyapa, Raivata, Subhūti, Anirudha, Nandika, Kapphina, Kātyâyaṇa, Pūrṇa, and Maitrāyaṇīputra did not see the miracles of Tathāgata.

The Haravijaya, Magha, and the Kapphinabhyudaya.

In the following pages a comparison of the poem with Māgha and the Haravijaya has been made and it will be noticed how common stray phrases and even single lines in stanzas in the three Kavyas so closely resemble. These twenty-four groups of stanzas will give the reader an idea of the influence exerted by Māgha and Ratnākara (1) on Sivasvāmin in the choice of language, thoughts and feelings.

But the similarities which exist in thought or in language in certain cases do not necessarily mean that there was actual plagiarism practised by Sivasvāmin. In the works of two inspired poets especially where they (the works) belong to the same class of poetry following the same set of rules, descriptions of the similar objects may correspond and the language they choose to express their common ideas may turn out to be more or less similar.

Moreover, in the training of a Sanskrit poet it was essential that he should set up a model for the exercise of his poetic talent and then attempt to equal and excel it. Sivasvāmin sometime does not merely borrow phrases or poetic expressions from Māgha and Ratnākara, but improves upon their ideas and expressions.

See i. For Māgha and Ratnākara see Jacobi W. Z. K. M. IV,
 p. 236 ff.

'Having freely smelt the sighing breath of the ladies, which was pure and fragrant and which arose from wearines,) the bees (no longer) had (any desire for the wild flowers. Who having an intense passion cares for propriety'! VIII.' 10

'The bees eager for the frag rance emitted by the mouths of the married women became indifferent to the art of making their abode in beds of lotuses. Those who drink wine have no strength of purpose.' X, 14

XXII.

व्यसरन्तु भूधरगुहान्तरतः पटलं बहिर्बहलपङ्करुचि दिवसावसानपटुनस्तमसो बहिरस्य चाधिकमभक्तगुहाः ॥ ९,१९ किमलम्बताम्बराविलग्नमधः किमवर्धतोर्ष्त्रमत्रबीतस्ततः। विससार तिर्थगथ दिग्म्य इति प्रचुरीभवन्न निर्धारि तमः। ९, २०

Did the mass of darkness, thick like mud, issue, at the close of day, out of the mouths of the mountain caves, or did it, arriving from the outer regions, establish itself there; did it suspend itself from the sky or shoot up from the surface of the earth; or did it proceed sideways from the quarters? Thus as the darkness gathered in, it became difficult to ascertain (where it came from). IX. 19-20

दिव इव निस्सृते गिरिनदीभ्य इवोच्छसिते-र्भुव इव सम्प्लुतेः चितितल्लादिव चोस्लसितेः जलधितलोद्यवेरिव ककुभ इवोत्फलितेः तिमिरकुलर्रनाषदुदमिष मसामीलने:॥११,३०

'Masses of darkness, black as ink, appeared in great abundance, and it seemed as if they had issued forth from the sky or heaved up from the mountains and rivers or sprung up from the ground or shot up from the nether regions or burst forth from the surface of the ocean or had been wafted from the directions.' XI. 30

XXIII.

रजनीमवाप्य रुचमाप शशी सपदि व्यभूषयदसावीपताम् अविलम्बितकममहो महतः-मितरेतरोपकारकृतिमच्चीरतम् ९,३३ कृतोपकारे हि निवेशधन्ति प्राग्रेरिप प्रत्युपकारमार्याः तथा हि लब्ब्बा ऽम्युदयं समुद्रा-दवीवृधत्तं शशभृत् स्वधाम्ना॥ १२,१८

Kapphinābhyudaya XII, 18.

The moon, coming in contact with the Night, attained brightness and instantly adorned her (the night) as well. Oh, it is the demeanour of the great that they look to mutual good without any delay. IX. 33

'The noble return the good done to them even at the cost of their lives; therefore, the moon having got her glory from the ocean swelled it by her own lustre.' XII, 18

XXIV.

भक्तवा हेलया पादमुच्चेर्मूर्घमु विद्विषाम् कषद्भारमनालम्बा कीर्तिर्गामघरोहति ।२,५२

पलायमानं पुरुषं रक्तपङ्कप्लुते पाँघे ऋतिकोमलया गत्या कयं श्रीरनुयास्यति १७,३

'How can glory ascend the sky unsupported without stepping sportively on the lofty heads of the enemies?' II, 52.

H,ow can the Goddness of Fortune, treading with soft step in the road flooded with the mire of blood, follow a person who is taking to flight (from the battlefieled).' XVIII.

Style of Sivasvāmin and his thought.

Sivasvāmin has shown his skill in his choice of language, in his use of poetic imagery, in his mastery in using double entendre and in his effective employment of word-figures. At times he improves upon the idea expressed by his predecessors, especially Māgha and Ratnākara (see the comparison), and in some cases he brings into play his powers of concise expression and charming style to such an advantage that he even excels Ratnākara:

शोकं कोकाः कुमुदमलयः सान्द्रवाता दिगन्तान्

दीपावर्तीराभिमत्मुजाम्यन्तरं चाभिसर्यः ।

ज्योत्स्नाः काष्ठा निषदनमिना वर्हिगो वासयष्टा

र्व्योमापान्तास्तिमिरपटलीस्तुस्यमेव त्यनान्ति ॥ १५,२१

'The ruddy geese give up their sorrow, the bees the lotus flowers, the moist breeze the ends of quarters, the lamps their flames, the ladies the clasp of their lover's arms, the moonlight the directions, the lords their homes, the peacocks their roosts, and the darkness the remote parts of the sky—all simultaneously (with the rising of the Sun)'.

The same idea is expressed by Ratnākara in ten stanzas in the Haravijaya, XXVIII, 108-118.

For conciseness we may quote:

दरानवसने ले।हित्येन स्तने च तथोष्मणा
मधुपपटलीभूते धूमश्रिया कबरीभरे।
स्रुपि हृदये तासां ज्यालाकुलैर्टीष कज्जलैरिति परिगामन कन्दपीरिनर्विभक्त इवाभवत् ॥ १४,२३

'The fire of love was, as it were, apportioned while being transformed—its redness was in the lip, its warmth in the breast, its smoke in the braid which was covered by bee's, its flame in the heart, and its soot (in the form of collyrium) in the eye.'

समजान न तत्प्रेम त्यक्तं यदीषदपीर्ष्यया स्मर्सुखसखी नासार्वार्ष्या विना कलहेन या। न खलु कलहः सो ऽन्योन्यं यः प्रसादनवर्जितः प्रसदनविधिनासौ यूनो न येन विलिस्यिरे॥ १४,७

'There was no love engendered by young people which was untainted with jealousy howsoever small, and jealousy a friend of Kāma's mirth unaccompanied by bickerings was not genuine. These bickerings which lacked mutual conciliation did not serve their proper purpose, and that conciliation was useless which did not melt (the hearts of) young people.'

How close is the sequence of emotions in:

समाधित न या रागिद्वन्द्वं बभूव न सा सखी

न मदनवरो यावस्थातां न ताविप रागिगो।

मिथुनीमषुभिविंव्याध क्रमेगा न स स्मरो

न्यविशत न यन्भांसग्रन्थीनंविद्यमभुच्य तत्।। १४.४

'She who did not bring about the meeting of loving couples was not a true friend, and they were not true lovers who were not swayed by Kāma. He was not Kāma who did not pierce the couples with arrows and that was no piercing which did not enter into the vitals.'

The use of the word 'muhuh' in the following stanza adds force and beauty to the expression:—

मुहुरविरादा विश्रम्भाद्री मुहुः स्मृतमन्यवे। मुहुरसरलाः प्रेमप्रद्वा मुहुर्मुहुरीस्थरा वितथशपथोपालम्भाज्ञा मुहुर्मधुरा मुहुः । पिखवृधिरे निष्पर्यन्ता मिथो मधुरोक्तयः ॥ १४,१२

'Now indistinct, now moistened with confidence, now reminding of past bickerings, now cunning, now full of affection, now unsteady, now full of false oaths, promises, taunts and commands and again sweet—thus did the mutual pleasant talk prolong endlessly.'

His play of fancy ('atprekṣā') is clear from the following:— चषकाभिमुखं यदा ननाम

> प्रमदा भर्तिर भाषितान्यगोत्रे । प्रतिबिम्बपर्देन जातलज्जा मधुनीव प्रविवेश तेन नृनम् ॥ १३,३६

'When the young lady leaned on the goblet as her husband called out her rival's name, she was ashamed and seemed to enter the wine, indeed, by means of her reflection.'

रुरुचे चषकार्षिताननाया युवतेरुत्पलषट्रपदोऽग्रवर्ती । समदादिव निर्गतस्तदानी

मनेसो मार्ममयो महान्धकारः ।। १३,२४

'The lotus-bee in front of the lady's face which was reflected, was like the darkness of pride which had come out of her heart that was full of exhiliration.'

The sunset causes a dismay in the heart of Cakravāka birds and the lotus ponds that were so gay and charming look dreary and desolate. Mark the pathos in the following:—

श्लथजलवेगायः पतित वारिगा तिग्मकरे वपुरवनम्रपद्मवदनाः शतपत्रभुवः । वियुत्तरथाङ्गनामपृथुपचातिनिधूतिभिः करतलपीडनाभिरिव जध्नुरथ व्यथिताः ॥ ११, २५

'The afflicted lotus ponds, with their listless watery braids and drooping lotus faces, smote their body with the palms of their hands as if with the flutterings of the separated 'Cakravāka' birds when the Sun plunged into the water.'

स्फुरित तदेव मराडनिवधी मधुपायिकुलं विकसित सेव सान्द्रमकरन्दरसोज्ज्वलता । श्रय च गतेऽस्तमंशुमित नेव वभी निलनी धुवमस्पात एव दियतच्युतिरेतादृशाम् ॥ ११,२४

'The same swarm of bees hovers round to decorate it and the transparent flower juice glitters as before, but lotus never did bloom when the Sun had set. For such persons separation from their beloved means death.'

हिसितेन कितेव तिर्भितेन क्षियितेवीन्मधितेव निर्धुतेन । मधुपानमदेन मानिनीनां मनसः क्षापि जगाम मानवृत्तिः ॥ १३,१८

'As if vanquished by jokes, weakened by taunts, shaken off by frolics, the pride of high-minded ladies disappeared somewhere from their heart,' प्रतिमाहिमरारिमरासवस्थः

पिरिपीतो हिमशीतलस्वभावः ।

कुरुते मम कम्पमेष शैत्या

दिवि सुग्धा मदधुर्यानं विवेद ॥ १३.८

'The bashful lady thought that the shiver of intoxication was the result of the drinking in of the moon reflected in the wine, who, being naturally cool like snow, causes trembling on account of her coldness.'

Simple language combined with clearness of thought is seen in the use of yad:

यदानिष्ठितवस्तु यत्सहासं यदकाराडोद्धति यत्स्वभावमुग्धम् । यदसाधुपदं स्खलत्पदं यत् तदुदेत क्षीविधयां नवं कथामु ॥ १३,१७

'Whatever was of unsteady purpose, ridiculous, irrelevant, naturally absurd, and out of etiquette, was found afresh in thet alks of drunken ones.'

म्रलसं वचनं दशो विलोलाः स्थिरविश्रम्भरसानि चेष्टितानि । कलहे ऽपि रातिं व्यतन्वतासां मैधुना सूपकृतं मनोभवस्य ॥१३,२०

'Lazy talk, tremulous eyes, and a behaviour full of confi. dence, were a source of pleasure even when they quarrefled. Wine rendered a great service to Kāma.' The description of the rising of the moon is full of fine ideas put in graceful language (it will be found in the comparison with Ratnākara given elsewhere). At the same place will be found the description of the appearance of the masses of darkness which, when compared with the two verses from Māgha is more concise and effective.

चित्रैर्यस्य पतित्रभिर्दर्शाद्रशोश्रान्त्वा समेतैः सुखं विश्रान्तं रायितं प्रभुक्तसुषितं स्कन्धे फलैः प्रश्रिते । तस्यैवोन्मयितस्य दुष्टकारिगा मार्गद्वमस्याधुना कारीषाय कषन्ति शोषपरुषां गोपालवालास्त्रचम् ॥ सुभा. ८१०

'The dried hard bark of the wayside tree which has now been uproofed by a wretched elephant, (but formerly) on whose trunk laden with fruits various birds having roamed in ten quarters happily used to rest, sleep, eat and dwell together, is being peeled by the cowherd-maids to be used as fuel.'

गतो ऽस्तं वर्भाशुर्वजसहचरीनाडमधुन।
सुखं भातः सुप्याः सुजनचरितं वायस कृतम् ।
मयि स्नेहाद्वाष्पस्थगितनयनायामपवृग्गो
रुदत्यां यो यातस्त्रयि स विलपत्येष्यति कथम् ॥ सुभा० ११४०

'The Sun has set. Now go to the nest of your mate, brother, sleep well. Crow, enough of the conduct of that good fellow. How can that pitiless creature, who went away even when my eyes were obstructed by tears, which came out of affection, come at your bewailing?'

मधुलिहः प्रविलोक्य हिमाहतां परिचितामपि पृष्ट्सिनिनीं जहुः । क सुचिरं क्रियते मलिनात्मभिः धुवतरा बत रागमया मतिः ॥८,५२ 'The bees when they saw the latus pond made desolate with snow forsook it even though (they were) so familiar (with it). Alas, where can the foul-minded people have a steady and enduring affectionate attitude?' Kapphinābhyudaya VIII, 52

Alliteration, when it adds force to expression and avoids the intricacies of meaning is very carefully employed in the eighth canto, where the last part of every verse is a 'yamaka:'

ससुदित सुरभै। पथिकाः पथि
स्थिरभृतिक्षाति चुत्तुभिरे क्षगात् ।
ग्रगभृतीव समीयुषि सिन्धत्रो
वितिमिरे तिमिरेचितवीचयः ॥ ८,९

'When the spring season set in, the travellers on their way losing their courage for a moment, were disturbed, just as at the rise of the bright moon the oceans become agitated with their waves disturbed by fish.' Kapphinābhyudaya VIII, 9

Some of the verses attributed to sivāsvāmin in the Anthologies are written in the style of the Kapphinābhyudayam, viz.

भोक्तं भड़क्त्वा न भुङ्क्ते कुटिजविसलताकोटिमिन्दोर्वितर्कात् ताराकायंस्तृषातीं न पिबति पयसः स्थूलबिन्दून्दलस्थान् । छापां सध्वान्तसन्थ्येतलिकुलशबलां वेत्ति चाम्भोरुहागां कान्ताविश्लपभारोदिनमीप रणनीं मन्यते चक्रवाकः ॥ सुभा० १८२६

'The 'cakravāka' bird having broken it to eat, does not eat the crooked bit of lotus-stalk, thinking it to be the moon. It does not drink, even though thirsty, the big drops of water looking like stars on the lotus leaves. It takes the lustre of the lotuses dappled by bees to be the twilight accompanied by darkness, (Thus) evertaken by the cowardice of separation from its belowed it thinks even the day to be night.'

या बिम्बेण्टरुचिन विद्वुममिणि : स्वप्नेऽपि तां दृष्ट्यान् हासश्रीः मुदृशस्तपोभिरपि किं मुक्ताफलैः प्राप्यते । तत्कान्तिः शतशोऽपि बह्विपतनैहेम्नः कुतः सेत्स्यति त्यस्का रत्नमयी प्रयासि दियतां कस्मै धनायाध्वग ॥ सुभा० १०५१

'That gleam of lips was never even dreamt of by the 'vidruma' jewel. Can that lustre of laughter of the beautiful-eyed one be obtained by pearls even by penances? Whence can that loveliness be achieved by gold even by falling into fire a hundred times? Leaving your beloved who is so rich in jewels, for what riches, O traveller, are you journeying?'

His fondness for using terms from dramaturgy in souble entendre is clear from several stanzas (See the list of allusions) in the poen and the verse in Ksemendra's Kavikanthābharanam which he attributes to Sivāsvāmin is a proof of the same tendency. For example, KKBH V, 1.

स्रातन्वन् सरसां स्वरूपश्चनामानन्दिविन्दूदयं
भावप्राहि शुभप्रवेशकगुणं गम्भीरगर्भिस्थिति ।
उच्चैर्वृत्तिसपुष्करव्यातिकरं संसारविष्कम्मकं
भिद्धान्वो भरतस्य भाषितमिव ध्वान्तं प्रयोगामुनम् ॥

'May the waters of the Yamunā displaying a delightful appearance, being a collection of pleasant drops, captivating the feelings, possessing the virtue of auspiciousness for those who bathe in it, having a deep solemn flow and a strong current, having clusters of lotuses, and being a means of putting a stop to the cycle of rebirths, destroy the darkness of your ignorance, like the words of Bharata which manifest their form full of Rasas (sentiments), show the development of Bindu (germ),

are possessed of Bhāva (emotion), have the merit of a good Pravešaka (Interlude), contain a profound garbhasandhi (middle juncture), have a lofty vrtti (style), are pervaded by Puškara (the art of dancing), and abound in Viškambhakas (a variety of interludes)'.

Compare Kapphinābhy, XIII, 40:—
भाग्ने विकीर्गानिभृतप्रग्रायार्द्रवाक्यपुष्पाञ्जालेः सरसविश्रमसूत्रधारः ।
प्रस्तावनां दायितसन्धिरसेः शिवस्य
वृद्धि व्यथत्त रमग्रीरातिनाटकस्य ॥

'The stage manager in the guise of delightful amorous sport, scattering in the beginning, the handful of flowers in the form of quiet loveful conversation and with the Emotion caused by the union of the lovers, accomplished his prologue to the auspicious drama of erotic pleasures of the young ladies'.

It is sometimes suggested that double entendre and word play in Sanskrit poetry takes away much of the charm in kāvyastyle. No doubt it is by no means easy to understand such pieces. But they bring out the richness of the language and the skill of the poet to mould the material in different metres. The citra kāvya was developed with the art of arraying the armies in different forms in the battlefield. Moreover, high class of sanskrit poetry, which is often called 'artificial' was written for the Society who could appreciate such niceties and had the time to indulge in such intellectual pleasures. Sanskrit poets gave the word puzzles a poetic garb which made them more interesting and charming.

Four examples of double entendre are given below:-

द्विपदी पदतालयोगभाजः

सहसारंगवराहरासभाजः ।

द्वत रमसा विलासशोभां

सममेषोऽद्विरिमा नटस्त्रियरच ॥ ६,१५

'This mountain and the actresses distinctly look graceful—this mountain rich in animals such as antilopes, boars, and asses and goats; and the actresses, who are smiling, are captivating, are skilled in providing amusement, and are adept in singing 'dvīpadīs' to the accompaniment of their dance.'

कुररकासाकराततयानया

जगति कुञ्जभुवास्य विराजितं

कुररकीसकिराततयानया

'This mountain shines with the glory of gods, it is rich in ospreys, apes and hogs, and its grove shines with its path covered with the 'kurara', 'kīsa', and 'kirāta' plants'.

The stanza I, 23 (Kapphinābhy) can be taken to mean the epithets of Kapphina, Siva and a mountain, viz.

तस्यामहानिकटकस्फुटवीरभद्र-

सम्युक्तशक्तिमहिमामितभूतिशोभी

भूभृद्वभूत बहुदर्शनभोग्यमृतिः

श्रीकाफीगाप्रभाविन्द्कल वचूडः ॥

'In that city reigned king Kapphina who had (an emblem like) the digit of the moon on his crest, who was of immeasurable glory on account of the unrivalled superiority of the united valour of the distinguished heroes of his famous metropolis, whose presence was worthy of enjoyment (even) in (spite of) repeated visits; who resembled a mountain of enjoyable form, which is crested with Indukalā plants, which is possessed of abundant lustre that springs from the luxuriant 'virabhadra' grass growing on its formidable ridges; and who was like Siva who has the lord of serpents for his bracelet, who has the digit of the moon for his crest, who has an efficient array of 'ganas', and whose form is worthy of enjoyment' even in many visits, and who is possessed of unlimited glory on account of the valour of Vīrabhadra.'

प्रकृतिविकृतिभाजां मंगुरांगस्य भूयः इलगातेषु सहिष्यांग्वेंरिवर्गाकुलस्य स्तताभाति शरीरस्येव राज्यस्य राजन् फलमिह परलोकोद्धारशुद्धेः किमन्यत् । ४ | २४ |

'O king, what can be the perpetual reward of a kingdom, whose constituents are subject to change and alterations of the 'prakṛtis', which suffers from movements of conspiracies and which is disturbed by enemies, other than the glory which comes from the capture of an enemy's country; just as in the case of the body whose limbs are perishable, which is subject to the alterations of elements, which is disturbed by passions and which endures all the trickeries of delusion, there can be no better reward than its purification and betterment for life in the next world.'

The poem abounds in double entendre and magnificent descriptions. A list of stazas containing play on words will show its richness in that branch. The figure of corroboration is illustrated by the list of maxims and sayings.

Thus, Siva-svāmin has tried to give expression to his feelings regarding the life at court of the time he lived in. Saturated with the traditional ideals of writing a 'mahākāvya,' he has described all that was required in such a poem. But the didactic character of his 'mahākāvya' is evident from the finish of his poem.

In his conception of kingly duties, and in his description of a kingdom's prosperity, he conforms merely to the classic ideals laid down by the long line of Hindu law-givers. But singularly enough in the final message to the world, which he puts in the mouth of the Buddha, he reflects, as though in a mirror, the developing tendency of the period to attempt a compromise between Buddhism and orthodox Hinduism. To a Buddhist, the ideal existence is that of a monk who by following the eightfold path is qualifying for the final struggle to break the bonds of the birth-cycle. According to this conception of monastic life, therefore, nothing could have been more calculated to bring eternal glory and 'nirvāṇa' to king

Kapphina than the change of kingly attire for the mean garb of a Bhiksu. But the Poet's Buddha is the final link in the chain of Avatars and what could have been more appropriate for him than to end with the message of his predecessor Sri Kṛṣṇa, and to exhort King Kapphina to serve the Buddha, the Dharma and the Sangha best by discharging his own regal duties according to the law of Dharma? We, therefore, find in this poem the treatment of a tendency which found its final expression in another fellow-Kāshmīrī Kṣemendra in his Daśāvatāracarita.

His Language And Metre.

In the use of language Sivasvāmin is by no means less important than Māgha and Ratnākara. His fondness to coin new words such as 'āśāvalli' and 'digvalli' for 'kalpalatā'. 'harigopika' for 'indragopika'; his use of rare feminine words like 'svādanā; 'sambhāṣaṇā', 'iṣu', 'sarasi', 'ṣaṭpadi', 'kadyā', 'prasanna', 'paṭali', 'kalasi', 'kalasi', garja', 'ruja', 'muraja, his employment of rare words like 'akathamkatha', 'ahamahamikā 'ārālika', 'ukhā', 'rama', all these are evidence of the richness of his vocabulary and mark him out to be a literary artist of great eminence who experimented with new material and made use of the choicest and rarest forms of expression. He has made a profuse use of Aorists in the Ninth Canto, of Past Perfect forms in the Fourteenth, and of desideratives and denominatives like his fellow writers of Mahākāvyas. The shortening of the long vowel in 'prasūkā' to 'prasukā' (VII,10); and the lengthening of the initial' in 'akasmāt' to 'ākasmāt' (XX.20) are departures from the strict rules of Sanskrit Vyakarana and are introduced to comply with the adjustment of metre.

In his Mahākāvya, Sivasvāmin has throughout, made a very apt choice of the style (rīti) to confirm to the sentiment (rasa), and by that harmony imbues the reader with an appeal and charm of his own. In the first five cantos wherein he describes

the scenes in the court of a king attended by chieftains whose enthusisam is at its height in anticipation of a war, he employs 'ojoguna' in the service of 'vīrarasa'. In the descriptive portion of the poem (VI—XV) he takes us away from the main theme of the peom and uses the 'vaidarbhīrīti', whose chief qualities, perspicuity, grace, and elevation are best noticeable in his description of the seasons, the rising of the moon, and the Dawn.

Again in the description of the battle scenes he employs long compounds, hyperbolic expressions, and words which lack sweetness, all these being the qualities of 'gaudi 1 iti'.

In the closing canto of his peom he has 'mādhurya' sweetness), 'kānti' (grace) and 'prasāda' (vivacity), which agree with the sublime and tranquillizing influence of the Buddha who is introduced there.

Taking the poem as a whole if we could ignore the citrakāvya', which according to Mammata does not constitute poetry of the highest order, Sivasvāmin's achievement as a Mahākavi does in no way fall short of the ideals of a true Sanskrit poet.

Sivasvāmin has used thirty eight metres in his poem, but he surpasses Bhāravi and Māgha in employing thirty-four metres where they could only use sixteen and twenty-two in the corresponding captos of their poems.

SOME OF THE MAXIMS AND SAYINGS IN THE POEM.

1. प्रभुष्वयं सानृगातानुजीविनां भवन्ति यहस्तुषु तत्त्ववेदिनः २,२

'This is the return of servants' indebtedness to their masters that they ascertain the essence of things that concern them.'

2. भवन्ति ते भाजनसर्थसंपदां

विदन्ति ये भृत्यजनानुरञ्जनम् ॥ २,२०

'They become the recipients of wealth and fortune who know how to please their servants.'

3. रहोहि तद्यत्र न सन्त्यसंस्तुताः २,५४

'That is a place for privacy where there are no strangers.'

4. त्रिपत्तयो ह्युत्तरपारीडतं नरं

त्यनित सिंह हरिगाङ्गना इव ॥ २,३४

'Miseries leave alone a man who has foresight just as female deer keep away from the lion.'

5. असहनसहृतृद्धोत्साहसैकान्तकान्ता

वर्जात नहि नृपर्श्रादार्घता दीर्घसूत्रे ॥ ४,२३

- 'Glory of a king fostered in the company of intolerance and cherished solely by courage does not last long when he procrastinates.'
- 6. प्रतिममयमयोहि प्राज्यतेजोऽभिषङ्गत् विघटितक्राठनत्वं याति कर्मगयभावम् ॥ ४,२८
 - 'A piece of iron when its hardness has been overcome by the appliance of intense heat becomes serviceable.'
- 7. किमपि बलमलंष्यं परय तेजस्वितायाः ॥ ४,३३
 - 'Behold what an unsurpassable power glory has.'

8. उपधित्रयशुद्धितो ऽस्य किं कनकस्यव परं परीचक्षम् ५,१६ What further testing of gold is required when it has been thrice purified.'

9. न हि बादु भवन्ति भङ्गुरा

मतिभूयस्त्रात्रेवेकिताश्रियः ॥ ५,१९

'The glory of prudence and wisdom never perishes.'

10. न हि नैति विपत्तिबन्धुतां

निपुर्गामात्य परिष्कृतो नृपः । ५,२०

'A king who is surrounded by clever Ministers never courts disaster.'

11. स सखा सुखदुःखयोः समः ।५,२१

'He is the friend who remains the same in grief and happiness.'

12. विजयस्य परं पदं नयः । ५,२४

'Policy is an excellent means of victory.'

13. वहनाय मनो महीयसां

युगपत् क्रोधातिति चियोः क्षमम् । ५.३७

'Only the mind of the great is able to contain simultaneously both anger and forbearance.'

14. इयमुञ्जलतानुजीविनः

समये संस्मृतिमेति यत्त्रभोः । ५,४८

'It is the glory of the servant to be remembered by his master at the proper time.'

15. प्रेमगां फलं खलु परस्परस्यगोष्ठी । ५,५०

'The fruit of affection, indeed, is mutual delightful talk.'

16. तत्सीन्दर्भ साधुगुगाः ऋष्ट्रमतीनां

तृप्यत्युचेर्येन रुचिः शासेषनानाम् ७,१८

'That is beauty which can satisfy the taste of worthy people whose minds are attracted by good qualities'.

17. सारः सतां सततमेव सुजन्मलाभी यत्सत्कियां प्रकटयन्ति गृहागतानाम् ७,३८

'The real object and the benefit of the birth of good people is that they always show hospitality to those who come to their houses'.

18. गुशामयोऽपि सदोष इव कचित् । ८,३०

- 'Even the meritorious become ignoble in certain cases'.
- 19. क सुचिरं क्रियते मालिनात्मभिः ध्रवतरा बत रागमयी मतिः ८,९२

'Alas, where can foul-minded people have constant affection for a long time'.

- 20. सतां मनस्त परसखोपकारकृत . ९.१२
 - 'The mind of the great always looks to the happiness and welfare of others'.
- 21. सृशन्त के क्रशविभवं कमर्थिनः ९,३६
 - 'What supplicants approach a person whose glory is gone'.
- 22. भन्नति दृढा मधुपायिनां क वृत्तिः १०,१४
 - 'Those who drink wine have no strength of purpose'.
- 23. किमिव हि दुष्करमस्ति रागवृत्तेः । १०,१८
 - 'What is there which is beyond the achievement of the passionate'.
- 24. द्विपदिषकुत्रचिदात्रहेतु फलाग्र्यम् । १०,२१
 - 'Even calamity at certain times may bring about the best of results'.
- 25. तनुरापे विषये तनोति तापँ समुपचितप्रस्य खगुडनांशः । १०.५**२**
 - 'Even the slightest breach of a long-standing affection causes accute affliction'.
- 26., जनयति हि किमप्यनस्पमाजः दृदृतरभावकृतः प्रियप्रसादः,१०,२४
 - 'A present from one's lover offered with great affection produces intense enthusiasm'.

ेथा. फलमभिवाञ्चितनुपदमावि हि भन्यधियाम् ॥ ११,१

'The good-intentioned have their aspiration closely followed by its achievement'.

28. बत दुरातिकमा कृतिवियामाप कालगति: ॥११,९

'Oh, even for those who have mastered themselves it is difficult to transgress the course of time'.

29. न हि महतां चयेऽपि गुरागारैत्रमेति हतिम् ॥११ १८

'The grandeur of merits does not decrease even when the great people suffer decline'.

- 30. समागमः कस्य सतां न भूत्ये ॥१२ ४

'To whom does the company of the noble not bring prosperity'.

31. इतोपकार हि निवेश्ययन्ति, प्राणेरपि प्रत्युपकारमार्यः ॥१२ १८

'The noble return their obligations even at the expense of their lives'.

32. सह्यान्तराया न हि रागवृत्तिः ॥१२ ३७

'Affection does not tolerate any impediment'.

तदेव हि प्रेम से एव रागो
 न स्थायितां यत्र विभर्ति कोपः ॥१२,४१

'That is true love, that is real affection, where anger does not last long'.

34. दंधते के न गुगेषु पक्षपातम् ॥१३,३०

'Who do not side with virtue'.

35. फालति सुधियां पात्रन्यस्तः सहस्रःगुग् विधिः ॥१४ २१

'Instruction imparted by the wise to a deserving person produces thousandfold results'.

36. अन्त:श्रून्यादिप हि सुमुखे विधास स्पात् फलश्रीः॥१६ १

When fortune is favourable one may get good results even from one who is hollow (meritless) within.

37. दारिताद्रि स्तृगास्तम्ने दन्तं न्यस्थाते न द्विपः॥ १६,२१

'An elephant who has uprooted mountains will not lower his tusk for a blade of grass'.

38. न बर्तायोऽभिभूतस्य त्रागायात्मभुत्रोऽप्यलम् ॥ १६,३६

'One vanquished by the stronger cannot be saved even by his own kinsmen'.

39. श्रहो विवृतसाङ्कर्या दुर्मेया श्चित्तवृत्तयः ॥ १६,४१

'Oh, the tendencies of one's mind, the complications of which are concealed, cannot be fathomed'.

40. श्रापि यत्नप्रमृष्टस्य मलमन्तरमनुज्मतः ।

ताम्रस्येव खलोक्तस्य श्यामिका लक्षते पुरा । १६,४२

'The vile speech of a wicked person shows its foulness without yielding its inherent impurity though polished with effort, just as copper even though brushed shows black stains'.

41. ईर्ष्यामलं खलेष्यास्ते विषमाशीविषेष्त्रिय ॥ १६,४४

'The wicked have foulness of envy just as serpents have venom'.

ं 42. विडम्बनेव पुंसि श्रीः परप्रगातिपांसुल

कार्नि कामपि कुर्वीत कूरोः कटककस्पना । १६,५०

'The giory of a person who is soiled with 'dust by paying homage to others is a mockery. Bracelets do not adorn a person who is armless'.

43. किमाज: सत्यभाषित्वं कःस्वर्धो धर्मसंग्रहः

कि शाज्य हतज्ञलं का श्रीदीनान्नातनेगाम् ॥१६,५१

What is magnanimity but telling the truth; What is selfishness but amassing virtue; What is wickedness but ingratitude;

And what is (true) renown but the uplift of the poor,...

44. पसायमान पुरुषं रसापङ्कारते पथि ।

भतिकोमलया गत्या कयं श्रीरनुयास्यति ॥ १८,३७

'How can the goddess of glory follow a person who is running away (from the battlefield) as she walks with soft steps on the road covered with the mire of blood'.

45. स जीवति रुषा यस्य द्विषन्दग्धो न जीवति ।

प्लायते यस्तकीतो लक्ष्मीस्तस्मात् प्लायते ॥ १८,३२

'He alone lives whose enemy cannot survive when burnt with his anger and he who runs away in dread of him (the enemy) is forsaken by the Goddess of Glory'.

46. श्रायातीह प्राप्तकाला हि सिद्धिः ॥ २०,२४

'Even Success comes as the proper time for it arrives'.

CONCLUSION.

The reconstructed Text is based mainly on the readings of M_n but where P_2 , p_2 , and P_n have furnished better readings a full consideration is given to them. Very few occasions have arisen where emendations were felt a necessity, but every attempt has been made as far as possible to avoid them.

Having gathered together all this information about this Mahākāvya and pursued all this study into the salient points regarding its language, thought, theme, and style, it seems strange that such a poem should have remained comparatively obscure. Although it had the distinction of being quoted and referred to in anthologies and other works it has not, so far, been commented upon. The plausible reason for this seems to be that the Brahmanic Literary Society ignored its importance under the mistaken helief that it celebrated the triumph of a non-Brahmanic faith. It has already been shown that what appears to be a triumph on the surface is in reality an attempt to reflect the growing tendency of the time to absorb Buddhism in the fold of Vaisnavism.

In conclusion, I welcome this opportunity to express my deep sense of gratitude to Professor F. W. Thomas, who initiated me during my studies at Oxford into this field of Research in Kāvya Literature. But for his kind and generous help it would heve been impossible to bring to light this literary production of Sivasvāmin, which has remained in the dark for the last millenium. I should also like to express my obligations to the Librarian, India Office Library, who kindly undertook to supply me with transcripts of the poem from the Libraries at Puri and in Kashmir. To Sir Aurel Stein I am grateful for his permission to use one of the Mss. in his Kashmir Collection deposited in the Indian Institute Library, Oxford.

August 1933.

GAURI SHANKAR.

A MARATHI IDIOM.

Sten Konow.

When I was preparing the Marathi Volume of the Linguistic Survey of India I became interested in an idiom which I thought had an exact parallel in my own language, while it did not seem to me to be in accord with the general structure of Marathi: a person or thing which is going to be spoken of is first, so to say, introduced through a noun in the nominative case, and then incorporated into the context by means of a pronoun.

The idiom has been mentioned e.g. in Rev. Ganpatrao R. Navalkar's The Student's Marathi Grammar (3rd edition, Bombay 1894, paras. 566 ff.):

"The demonstratives hā and asā are often used appositionally, and serve the following uses:—

- 1. hā is often used in apposition to the subject, when the nominal predicate defines or explains the latter: Rāmā hā Gopāļrāwātsā mulgā hotā, Rāmā was the son of Gopāļrāo; Mumbaī hē sahar āhe, Bombay is a city.
- 3. The appositional hā is inflected instead of the nouns for which it stands: hatti ghode āṇi bail hyās tsārā ghālā, give grass to the elephants, horses and oxen; Rāmā Hari āṇi Gopāļ hyāpekṣā Sakhī huṣār āhe, Sakhī is cleverer than Rāmā, Hari, and Gopāļ".

Every Marathi book contains examples of this idiom. The following are taken from the Sukasaptati (ed. Schmidt, Leipzig 1897):—

- 1. Dewsarmā brāhmaņ yācī awasthā kasī ghadlī, the brāhmaņ Dewsarmā, his state how became (p. 1);
- 2. Tyātsā mitr Trivikram yāņē Vidagdhacūdāmaņi yā-nāmē suk va Mālatī nāmē mainā yā-pramāņē don pakṣī Madnās āņūn dīle, his friend Trivikram,—by him, Vidagdhacūdāmaņi,—by this name a parrot, and a mainā by name Mālatī,—so much,

two birds were brought and given to Madan i.e. his friend Trivikram gave Madan two birds, viz. the parrot Vidagdhacūdāmaņi and the mainā Mālatī (p. 1): 3. Guncandr nāmē rājā yāce putrā sahawartmān ramāvē yā-staw nānā prakārē šringār karūn tsālilī, she used to put on various decoration for this purpose: it should be sported together with the son of him, viz. the rājā Guncandr (p. 4); 1. tō dwārpāl yās dhūrt-Vimal yānē sāmgitlē hotē, then it had been said by him, viz. the false Vimal, to them, viz. the door keepers (p. 13); 5. Bhīmak nāmē rājā hotā tyātsā putr Mohan to Haridatt nāmē sāwkār yācī strī Lakṣmī tīj barobor sambhog karāvyās icchit hotā, there was a rājā named Bhīmak, his son Mohan,—he was wishing to enjoy himself with her, viz. Lakṣmī, the wife of him, viz. the banker named Haridatt.

Such sentences do not only belong to the literary language, but are, as may be seen from Mr. Navalkar's remarks, used in daily speech.

In the Marathi volume of the Linguistic Survey we read on p. 255: Pātgowārītsā Cindhu Lodhī yācyā kade tū tsākrī hotās kā, Cindhu Lodhī of Pātgowārī,—were you in his service? Here it is quite clear that the purpose is to draw attention to Cindhu Lodhī, to indroduce him as the chief person concerned with the matter in question, and such is evidently the case in most instances.

It will be seen that the proleptic noun is usually without any syntactical connexion with the ensuing sentence. In the opening of the fifth Sukasaptati example, however, we find a whole sentence used instead of a proleptic noun, the predicate hotā being, it is true, originally a participle, and often the resuming word is not an ordinary pronoun, but an adverb. Thus in the Linguistic Survey, p. 256: to nidzlā hotā tewhā tyācyā angā warats hote, he sleeping was,—then, were they on his bodyi and, similarly in the Sukasaptati, p. 1: pūrvī Candrakalā nagrīce thāyī Vikramsen rājā rājya karīt astā tethē koniek Haridatt nāmē

sāwkār rāhat hotā, formerly when King Vikramsen was reigning in Candrakala town,—there a banker named Haridatt was staying.

The same idiom is also known in Hindi. Thus S. H. Kellogg in his Grammar of the Hindi language (2nd edition, London 1893, para 675 c.) says that the nominative case "sometimes stands independently by anakolouthon; as Mahārāj we baithe haī, the great king,—he is seated; śāstravidyā au śastravidyā ye doū unc padvī dainewārī haĭ, sacred science and military science,—these two confer high rank".

Professor Turner has been good enough to give me the following, similar, sentences from Nepali: Rāma bhane āyo, Rāma,—he came; Bujhasatva bhane le mahākasta pāyo, as for Bujhasatva,—he fell into misfortune; timi bhane cardo umerki rahi chen, swāmi bhane burā rahi chan, as for you,—you are in the presence of life; your husband,—he is old.

Similar turns of expression will probably also be found in other Indo-Aryan vernaculars, and they are also to be met with, outside India, e. g. in Germanic languages. The following are taken from Falk og Torp, Dansk-norskens syntax [Kristiania 1900, p. 276]: Eirikr hinn sigrsæli konungr i Svívjóð, hann hafði fengit, Eirik the Victorious, king of Sweden,—he had got; inn gamli hrímmuurs, hann kollum ver Ymi, the old ogre,—him we call Ymer; men Thor han haver sin hammer mist, but Thor,—he has lost his hammer; ja. ein derber and trockener Spass, nichts geht uns darueber, yes, a saucy and dry fun,—nothing surpasses that.

It is not necessary to look out for further non-Indian parallels. The idiom is evidently spread over a wide area, and we have every reason for thinking that it is fairly old.

In India it can be traced back to an early period. In his paper on the Manikiala inscription (Journal of the Royal Asiatic Society 1909, p. 650). Professor Lueders mentions "those parenthetical sentences that are found in Pali prose texts," and gives as an example Jātaka I, 278: bodhisatto nāgabalo

thamasampanno nadiya orimatirato uppatitva dipakasa erate nadimajjhe eko pitthipasano atthi tasmim nipatati, the Bodhiasttva, having the vigour of an elephant and full of strength, having jumped form this side of the river,—on this side of the island, in the midst of the river, is a projecting rock,—on that he jumps down.

Another example of the same kind (l. c. IV, p. 290) may follow: tadā te ubho saṃvāsaṃ kappetvā tasmiṃ yeva sare ekasmiṃ dīpake kalambarukkho atthi samantā udakena pārikhitto tasmiṃ kulāvakaṃ katvā paṭivasiṃsu, then those two, having set up a joint household, in that very lake, on an island, is a kalamba-tree,—there they built their nest and lived.

In both these instances we seem to be justified in speaking of parenthetical sentences. What we have before us is, first a nominative, accompanied by a gerund, and introducing us to the real subject; then a complete sentence indicating a locality, and, finally, a clause, giving the relationship between both.

The contents of the "parenthetical" sentence can however, also be given as an independent nominative. I take the following examples from the Dighanikāya, Vol. III; so sattamadivasam alasakena kālam karissati, kālakato ca Kalakañjā nāma asurā sabbanihīno asurakāyo tatra uppajjissati (p. 1), in seven days he will die, and having died -the Asuras called Kalakañja, the lowest Asura host,—there he will be born puratthimena Vesāliyam Udenam nāma cetiyam tam nātikkameyyam (p. 7), to the east of Vaisālī the caitya called Udayana,—that I may not go beyond.

We may call such sentences parenthetical, but we might also speak of proleptic nominatives, and at all events there is a striking similarity with the Marathi idiom, even more, perhaps, than seems to be the case at first sight.

From Pali 1 turn to the north-western Prakrit of the Kharosthi inscriptions.

kṣaharatasa Cukhsasa ca kṣatrapasa Liako Kusuluko nama tasa putro Patiko Takhasilaye nagare utarena pracu deso Kṣema nama atra [*de]se Patiko apratithavita bhagav ta śakamunisa śariram [*pra]tithaveti, on this day,¹ of the kṣaharāta and kṣatrapa of Cukhsa,—Liaka Kusulaka by name, his son' Patika,—in the town of Takṣasilā, the north-eastern region, Kṣema by name—there Patika establishes a non-established relic of Bhagavat śākyamuni. Here we can be in doubt about the words kṣaharatasa Cukhsasa ca kṣatrapasa. They may be connected with the preceding etaye purvaye, or else the sentence starts with the case required by the context, but then runs on through unconnected, proleptic, nominatives.

The inscription on the Mathura Lion Capital begins: mahakṣa[tra]vasa Rajulasa agramaheṣ(r)i Ayasia Kumuia dhit(r)a
Kharaostasa yuvaraña mat(r)a Nadadiakasa [taye] ... śarira
prat(r)iṭhavit(r)o, the mahākṣatrapa Rājula's queen, Ayasia
Kamuia, daughter of the crown-prince Kharaosta, mother of
Nadadiaka, by her a relic was established.

In the Wardak inscription we have, after the date: imepa gad(r)ig(r)ena Kamagulyaputra Vagramareg(r)a s(r)a ish Khavadam(r)i kadalayig(r)a Vagramarig(r)a viharam(r)i thu [ba]m(r)i bhag(r)avada Sakyamune Sarira parithaveti, at that instant the Kamagulya-scion Vagramarega,—he being settled here in Khawat, in the Vagrmaregavihāra, in a stūpa establishes Bhagavat Sākyamuni's relic

1. I take pūrvā to mean tithi. Since there may be two tithis ending on the same civil day, in which case the first gives the number of the day, and since pūrva especially means "the first of two" (cf. Wackernagel, Altindische Grammatik III, para 203d), I think that pūrvā in such dates means "deciding tithi" and then tithi generally. If I am right, this detail is of importance for the question about the Indian calendar.

It will be seen that we have everywhere to do with proleptic nominatives, or with parenthetical sentences.

But we can go still further back. In The Syntax of cases in the narrative and descriptive prose of the Brāhmaṇas, Vol. I. (Heidelberg 1926), p. 1ff., Professor Oertel says; "In a normal Indo-European sentence a given case-form is chiefly related to some other element of the sentence; in fact, the expression of such relation of one member of a clause to another is the main function,—and from the point of view of strict syntax the only function—, of the Indo-European declensional endings" "But there are instances in which the close knitting of a clause is loosened and a certain disintegration, the degree of which may vary, sets in. When such a loosening of the syntactical joints, in whatever degree, has taken place we my speak of the disjunct use of case-forms."

"A noun may retain the case-form which is required by the syntactical setting but be lifted out of its proper place and placed usually at the head of the clause, and be then resumed in its proper place by a demonstrative pronoun."

"Instead of the resumption of the proleptic case by a demonstrative pronoun the incipient disintegration may be outwardly marked by the intrusion of a particle separating the proleptic case from the main verb.... This kind of prolepsis is confined to the nominative. It contains the germ of an absolute case. The verb is always accompanied by an infinite verb-form, either a participle or a gerund."

"A noun may be lifted out of the sentence, but instead of showing the proper case-form required by the syntactical setting it is put in the nominative case and later resumed by a demonstrative pronoun in the proper oblique case. The nominative which thus anticipates an oblique case is, from the syntactical point of view, wholly severed from the rest of the clause and hangs, so to speak, in the air."

It would be difficult to give a better commentary on the various sentences discussed above. I shall add some of Professor Oertel's examples of this progressive "disintegration":—

Samvatsaro vaiv-aitan so'ntaratisthat, the year indeed,that stood between them; devāh pitaro manusyās te'anyata āsan, the gods, fathers, men, they were on one side; tat puruso 'mānavah sa enan brahma gamayati, then a non-human man,—he makes them go to the Brahma; 'prāņo 'pānas cakṣuḥ śrotram ity etāni vai purusam akaran, out-breathing, in-breathing, sight, hearing, -these have made man: pranam vyanam apanam tan eva yajamane dadhati, out-breathing, through-breathing, in-breathing - these he places into the sacrificer; yājñāya yajamānāya ātmane tebhya ev-asisam asaste, for the sacrifice, for the sacrificer, for himself,—for them he makes a blessing; pasavo vāg indrivam prānāpānau tair vā Indro 'kāmayata sāyujyam gaccheyam iti. cattle, vigour, out-and in-breathing, - with them Indra wished: may I be united: devā ha vai yajñam tanvānās te 'suraraksebhya āsangad bibhayām cakruh, the gods being engaged in performing the sacrifice,—they were afraid of the Asuras and Raksasas lest they should cling to them: Kanvo vai Nārsado įvog apratisthitas caran so 'kāmayata. Kanva Nārsada, wandering for a long time without support—he desired: Indro vai vrtram hatvā sa imāml lokān abhyajayat, Indra having slain vrtra -he won these worlds:

ātithyena vai devā iştvā tānt samad avindat, the gods having sacrificed with the great-offering, them discord befell;

sa vai catur upahvayamāno 'tha nān-ev-opahvayate, vərily he calling four times upon (her),—yet he calls upon (her) in different ways, as it were;

devās cā va asurās c-āditye vyāyacchantas tam davā abhyajayan, the gods and the Asuras contending about āditya,—him the gods won.

It will be seen that we have exactly the same turn of expression as in the modern idiom. I have arranged the sentences in accordance with Professor Oertel's view, and they apparently allow us to follow the development from the strictly syntactical sequence through prolepis to something which we may call an absolute nominative.

"The psychological process", says Professor Oertel, "which gives rise to the Pendent Nominative appears to be as follows: The speaker begins to utter his statement before the syntactical mould into which his thought is to be cast is fully matured, i. e. before the syntactical integration of its parts has fully taken place. As he starts speaking, his attention is fixed upon a single item of the thought-complex irrespective of the relation which it will ultimately bear to the other elements of the clause. The remainder of the thought-complex takes its syntactical shape after the pendent nominative has been uttered and thus the proper syntactical relation of the nominative to the rest of the sentence must be afterwards indicated by a resumptive prononn. The nominative is chosen as pendent case because it is the only case which not only expresses (as subject case) syntactical relation but also implies the absence of all syntactical relation (as in titles, headings lists). Conversely the attention of the hearer is more strongly directed to such an abnormal nominative, so that the emphatic attention of the speaker is communicated to the hearer."

The process described by Professor Oertel is psychologically quite intelligible, and, if his view is right, we should have to assume that it had taken place independently in several Indo-European languages. And in India it must have begun at a very early date. For a good example is e. g. found in the very first hymn of the Rgveda, v. z. Agnih purvebhir rsibhir idyo nutanair uta, sa devā eha vakṣati, Agni, worthy of praise by old ṛṣis and by new ones,—he will bring the gods hither.

I have already mentioned some European paralles. And in Iranian we have quite similar idioms.

In the Behistun inscriptions of Darius we read: pasava 1 martiya maguš āha Gaumāta nāma hauv udapatatā hacā Paiši: yauvadaya arakadris nama kaufa haca avadasa (I. II), then there was a Magus, Gaumāta by name,—he started Paišiyāuvādā, the hill called Arakadri,—from that: avam Gaumātam tyam magum avājanam utā tyai-šaiy fratamā martiyā anušiyā āhantā Sikayauvatiš nāmā didā Nisāya nāma dahyauš Mādaiy avadašim avājanam, that Magus Gaumāta I slew and the foremost men who followed him, - the fastness called Sikayauvati, the province called Nisāya, in Media,—there I slew him; pasāva adam kāram frāišayam Vidarna nāma Pārsa manā bandaka avamšām mavištam akunavam—yavā Mādam parārasa Maruš nāma vardanam Mādaiy avadā hamaranam akunaus (II 6), afterwards I sent an army,-the Persian named Vidarna., my subject,—him I made their chief; when he came to Media,—the town called Maru, there he made battle.

Here it does not seem to be the case that the speaker was not, to begin with, conscious of the syntactical connexion. It is evident that the use of the pendent nominative is due to his desire to be precise, to draw attention to the person or locality mention ed in the pendent nominative. And this consideration, and the wide distribution of the idiom, lead me to the conclusion that here we have the explanation of the phenomenon. It is not due to a loosening of the syntactical joints, but takes us back to a presyntactical stage of the language, which has left its traces, as samskāras, in various Indo-European languages.

Professor Oertel rightly remarks that the Indo-Erropean nominative is not only the case form of the subject, but is also used when there is no syntactical relation, where the purpose is only to mention, to single out some person or thing to which attention is drawn. And this is probably the oldest function of the nominative, and we may be justfied in raising the question whether the common s- suffix is not, in its origin, identical with the demonstrative pronoun sa, used to resume the word just as in our idiom. It might even, with some plausibility, be contended that the case in-

K

flexion generally has taken its origin from pronominal additions, and this view could be strengthened through parallels e. g. from Munda and Tibeto-Burman languages.

At all events, the non-syntactical use of the nominative dates back to the Indo-Erropean period, and the wide-spread use of the pendent nominative in many Indo-European languages is an old inheritance, which has held its own in spite of the development of a-connected syntax.

We are sometimes reminded of the well-known arrangement of some Gandhāra sculptures.

It we look at Fig. 254 in M. Foucher's standard work, L'art gréco-bouddhique du Gandhâra, we have, to the left, a monkey carrying an alms-bowl, in the centre the Buddha seated with the bowl in his hands, and, to the right, the monkey going away empty handed: vānaraḥ kaścit pātram grhītvā—Buddho Bhagavān padmāsana āsīnas,—tasmai dattvā so 'pākrāmat, would be an adequate description of the scene. The artist visualizes the various stages, one after the other, without melting them together into one picture.

The narrative style represented by our idiom proceeds in the same way. The speaker has the occurrence before his mind's eye, and visualizes detail after detail. We are reminded of the frequent, and no doubt very old, use of parataxis instead of hypotaxis, a state of things, which has never been quite discarded in Sanskrit, especially when some person's words are rendered.

We are fully justified in speaking of an ancient visualistic style, and it would not be difficult to point at its traces in several features of Sanskrit syntax. The clearest ones are perhaps found in the idiom dealt within the preceding pages.

MAN AND HIS BECOMING IN THE UPANISADS.

Mrs. Rhys Davids, D. Litt., M.A.

I am here suggesting, that this is a needed study. It would surely be a good that of those who are competent, some man would undertak e detail. Without such guidance, we others, the incompany walk stumblingly; first because of the language, secondly because of the translators, and the commentators, of later dates, on whom they too largely depend. is first the Vedic double verb to express existence, past, present. future: as and bhū (bhav-), paralleled by the German sein and werden, but for which we English, to our much loss, have not kept alive a second verb as strong as the first. Now it needs firsthand acquaintance with texts and with historic changes in their idiom to pronounce, with a flair born of long experience, whether in a given passage the word bhū, as bhavati or otherwise inflected, means a more than does asti, or a less, or the same or not the same.

I wrote on this matter to my friend and fellow-worker, Mr. Helmer Smith, asking too about the parallel Swedish terms, which are of much interest. In his kind, informative reply, which I am permitted to quote, he concludes by seeing danger in German treatment of the Vedic in this connexion, their language being too supple, too rich, their "marvellous philosophical vocabulary being borrowed from Romanticism." and that when, e. g., the Upanişads give us the time-triad in terms of bhū: yad bhūtac ca bhavac ca bhavişyac ca, or again anyatra bhūtāc ca bhavyāc ca², "this bhavat is not necessarily das Werdende."

As to that I would reply: Gently, my friend, it is not a constant rendering of bhavat by werden in the German (Deussen) and

^{1.} Brh 3, 8, 3.

^{2.} Kath. 2, 14. So in many other passages.

German-born (Max Müller) translators' works that has led me to put forward this inquiry. It is rather their frequent evasion of werden or become; their recourse not only to asti, but to other and makeshift terms which has helped to force the inquiry from me; forced me to ask here (a) Is blava—some is either just asti, or one of those makeshifts? (b) Has a continuous, to belittle the significance in 'werden,' 'becoming,' either in the translator's own mind, or as not to be made much of in the utterances of the older Upanisads?

Let me first dwell on that wish as indicative of a present day attitude. Our literature has rung with the word evolution for some time, but so much have we been concerned with its application to things material, that we have never fitly linked it up with the idea of becoming as of the nature of the very man. And by man, I do not mean mind, or a complex or product of mind and body; I mean the mind-er, he whose ways in using body are mind. But then we think about this as we do, as M. Bergson reminded us some years ago in London—just because our science happened to begin with the material and not with the immaterial. We shall one day be as alive and alert about the unseen very man, the purusa, as essentially in process of becoming, as we are now about evolutionary processes in matter.

I say this, as in the second place true of modern treatises on the Upanisads, so far as I have had access to them. These works have rung with the phrase Tat tvam asi for some time, yet so much have they been concerned with identity as being, that the tremen-

- 1. Presidential Address, Soc. for Psychical Research.
- 2. "Not the bundle___called the "me", but the I__who inspects it," G. Radha Krishnan, Philosophy of the Upanisads.

dous problem of identity through becoming has, so I have found, been relatively neglected. I have consulted several such works, also indexes and tables of contents. But either the word Becoming is omitted (e. g. the Index volume on S. B. E.), or it is barely mentioned (e. g. Dr. Hume's translation, on which more presently), or it is only mentioned as being "contested" (e. g. Deussen's translation, on which more presently).

Now in that the word has been practically passed over, this can only mean one of the three things: either (a) the writer, or (b) the indexer, or both were not interested in the word becoming, or (c) the Upanisads do not show such interest in it as to merit treatment, or index-place. As to the last instance in indexes. given above, surely, if a term be so significant, that the "contesting" (Bakampfung) of it is sufficiently prominent in the text to call for a place in the Index, there is good reason, in a great historic succession such as the Upanisads admittedly form, to suspect, that the same term has, earlier in that succession, been championed. And I contend 2 that we do find this upholding of 'becoming'. But Deussen happened to be not only a fervent Vedântist, but a staunch Parmenidean—he admitted as much to me himself-for whom "what is, is", for whom becoming was "illusion." Hence, whereas he is very happy over the Bestreitung of Werden in Isa & Mandukya, & its "glorious continuation in Gaudapāda's Kārikā", he tends to belittle the striking and very frequent bhū-references in the older Upanisads. and often uses a weak substitute for what we should expect to find rendered by werden.

To take but one instance out of dozens: in the well known passage on the dissolution of the bodily and mental complex, Brhad, 3,2,13: kvayam tada puruso bhavati? "where then does the

1. Sechzig Upanishad, P. 527. f.

'man' (the soul) come-to-be!, in other words, "where thereafter does the becoming (which is the very life of the soul) go on!" Deussen makes the feeble rendering "Wo bleibt dann der Mensch (remains the man)?" Does the Sanskritist rejoin: But bhavati here means just "is," "happens" "finds himself?" He does not convince me. but I bow and give another instance. In Taittiriya 1,4,1, anrtasya Deva dhārani bhüyasam: "May I, O become bearer of the immortal' " Deussen God. us" möge ich . . . sein" "Wnat waste of a fine word ready to hand! Surely the act of praying is man's will reaching into the Divine Will willing to become, to be-a More than he is! There is not even metrical excuse, for he has anyway, in rendering otherwise faithfully, got too much into the line to scan. Deussen then didn't want to find any signs of appreciated becoming; he was not a sufficiently disinterested historian to seek for such signs; he even went out of his way to avoid them. He is therefore no safe guide for those who depend on translations.

Nor for that matter are Röer and Max-Muller, or in the one, the greatest Upaniṣad-Brhadāraṇyaka—Herold. Far better in this one subject do I find Dr. R. E. Hume, who renders bhavaby 'become' far oftener than any of those four, even though he too here and there lapses. To take an instance out of many: he alone of all the five has, in the following, 'become' and not 'is':—in the life (in his other body) of the man in the earthbody's sleep, earthly relations become invalid; "mother becomes not mother_sramaṇa not Sramaṇa_Vedas not Vedas"—i how

- 1. Messrs. Mead and Chattopadyaya's translation—alas! unfinished, but breathing more the Indian Spirit than any other—usually has 'become', but there too are a few lapses and makeshift terms.
- 2. Brh. 4, 3, 22.

much better and fitter here is 'becomes' than 'is'! And yet, in the impressive teaching of the homily in the Taittiriya, taken over by the Sakyans: matrdevo bhava, 'pitrdevo bhava' become hewho has mother-(as)-God, become he-who has father (as)-God, Dr. Hume with the rest falls back on 'Be one for whom, etc..' Just as if the teacher were not trying to make the pupil come to better, more, than he has been! And further, when, in the Maitri Upanişad, (6, 8), the teacher urges that the Atman be sought after under its many attributes (the list is probably later) of Isana, Sambhu, Bhava, Dr. Hume has preferred here to render the last as "the Existent", and not as the Becoming and leaves us wondering.

This may sound captious, but it will be, I think, conceded, that if we use a static term, (and that the strongest we have—be—) for an idea which is pretty obviously dynamic, progressive, we are weakening the emphasis on the progress: we are literally, if not virtually, using the drill-sergeant's command: "As you were!" We are bidding, if not like the sergeant, to revert, at best to be "marking time". Now my concern in these suggestions is with his other order: "March!". I have after years of study been driven to hear that in the mandate of Sākyamuni; and in studying him and his day, I am driven to see, that it was also in the mandate of the advanced wing of that day, in teachers of the established religion.

I will try briefly to buttress this assertion. Conceding all the way to the Vedic expert, that bhū may not always mean as strong a "More" over as—as becoming is over be-ing, I would at least remind him of this: In the Rik and Sama Vedas I find the verb bhū-, bhava-, finite tenses only, used some 40 times. In the 9 Upaniṣads, generally ranked as the oldest, I find the same finite verb used some 300 times. Bulk for bulk I believe this

represents a great proportional increase, in the use of the bhit by the latter over the use in the former stratum of Vedic literature. The old Upanisads are mainly in prose as the Vedas are not; but, in the few metrical portions also use is made of bhū; it is not a word confined to prose. The bhū contexts in these Upanisads are as follows (approximately):

Kauşitaki __ 18 Brhadaranyaka __ 86 Aitareya __ 4 __ 18 Chhāndogya __ 60 Maitri Katha ___ 16 __ 10 Svetašvatara __ 2 Taittirīva Kena __ 6 If to these we add the number of times the verb is used within many of the contexts, we get at least 3.00. It will be said, that from these we must deduct the cases of the verb used in the future. where as becomes bhu. I on the contrary would suggest, that the preoccupation with the future, worded necessarily as "will become" weakens the case for "being". It is a good point for the metaphysician who has seen that he must broaden his outlook by including history: Does Being, as that which will be, remain Being?

Other cases for which deduction may be claimed are matters of material change or happening: as in Bṛh. 6, 3, 13: "fourfold becomes the wood of the figtree," or whereas in German, one would say es wurde Nacht for night fell. And there is the (apparent) idiomatic expression: tad api eso śloko bhavati, rendered "as to that there is this verse." Translators have apparently thought that the speaker is quoting a mantra. I would suggest, that save where, if at all, the passage is recognized as of a Veda, or of an Upanisad deemed older, it may be that a coming to pass of a creative effort is meant: the teacher suspends his prose; improvizing afflatus has arisen: "there becomes (in m) this verse...". In Pali the expression is common in the Aorist: evam assa aheai: "thus it occurred to him". But I deduct and pass.

There still remains, as I rightly or wrongly see it, a preoccupation with the word 'become', which in its frequency is I believe new, and as new, significant of something new in teaching. I must here be content with the numerical statement. Were I to give the full analysis I have made, this sketch would grow too long. Our translators, excepting the welcome literalness in this respect in Dr. Hume, show, that either to be', or other words could have been used by the utterers (and by later editors), where in the text we find 'to become.' But they don't; they choose to use bhave—And I am not here including the future tense; I am concerned. with the marked frequency of bhavati; (as present or 'historic present') and also with this, that in nearly every case it is used of the very man, the self; and also with this, that in most cases we see the man, in becoming, as becoming More, and also, here and there as becoming the Most. In this frequency I see no mere chance, no wording without a cause.

Rightly or wrongly I see in it a pre-occupation with the man. not as being, but as in process of becoming, which is new, and which is or should be felt to be, deeply significant. So deeply or I would say, so highly significant, that it could not be more so. I seem in these Upanisads to be in a world of teachers profoundly convinced of the truth of a great and new mandate in religion. not put forward as new by them-but by a Helper of man of an earlier, not much earlier date-which they are developing, amplifying. vindicating. That mandate was, that the man has it in his nature. by becoming More to become ultimately. That Most Who he (potentailly) is. They had no word for "potentially". (We owe the wording to Aristotle.) So they fell back on the word, the great word which they had at hand, the word "become." "Man is Brahman" means: Man is becoming Brahman:-Tat tvam bhavasi. Once we substitute this verb for the asi which editors have, with a repudiated Becoming, handed down to us, then a gospel which. as stated, is perhaps the height of impiety, becomes a message of light and hope to every man, in that it is the very guarantee of his personal salvation, in that it makes every stage in life, no matter

how many the lives, supremely worth living.

But with man as linked, in Becoming, with Deity, there would necessarily go a mighty sublimation of that attribute. And so we find it raised "to the highest power": we find it as positive attribute of Deity in action in the creation, as conceived in Taittir ya, Brhadāranyaka and elsewhere. Here is no mere uttered fiat: here is the Divine Artist becoming, Itself becoming, in the desire from being One to become More, Many; "Let Me bring forth Myself," etc. Becoming is here raised, from a state of progress from the imperfect to the less imperfect, to the glorified level and sphere of the work of one we call a great genius; becoming is now a becoming other, a becoming a new Manifold, the Divine Play (IIa) of That Who, as Rāmānuji wrote, "creates and reabsorbs the universe."

This was a bold word; it was a conferring "the Immortal" on man as a corollary of his nature, and not, as in earlier mantras, a destiny conditional only on a man performing this and that prescribed act. We see this: "the mortal becoming immortal' lingering on in the Upanisads. It was too great a gospel to withstand inevitable reaction. Was not immortality a chief aim of the sacrifice? Was this to be pronounced unnecessary? And so those progressive teachers became as were the prophets beside the priests in Israel: their great mantras survived more or less intact and established, but the ecclesiastical ritual remained also, and with it reaction set in.

1. Not only in the one verb did the early teachers word becoming though they use it where translators do not (cf. e. g. M.M. in Brh. 1, 2, 5); vibhavati, develop, is used (Brh. 1, 4, 11), and such a play-in-words as adhi-ardh (develop, greatly thrive) and adhi-ardha (one and a half Brh. 3, 9, 10). Others might be adduced, such as mā gamaya "make me to go" (Brh. 1, 3, 27).

The reaction against the concept that man; in becoming, is but being true to his divine nature, may, I suggest, be seen; creeping up in the Maitri, but no more. It is, not till the Isa and the Mandukya, that actual repudiation is worded. The Svetasvatara cannot be said to sound this change. Still for it does the man become, namely "on seeing the very Atman, unitary, endwon, griefless," albeit it speaks of time not wholly in terms of becoming: the present is now not "the become" but "what the Vedas tell?'; doubtless metrical exigency drove here. But the Maitri begins to 'hedge' on the matter of creation as a becoming of the Highest. In it the speaker makes the primaeval Man, when creating, not desire to become, but (a) "brood upon himself" (abhidhyāyan), (b) "think (Let me enter___)", (c) "utter___". Even here the traditional way lingers, for we read "This One. became threefold, eightfold, etc." Yet the three substitutes I give, whereas they may by some be rated as riper thought, reaching out after more fitting terms, may rather indicate a shrinking from the earlier, bigger conception of becoming, and are ushering in a shrinkage in it, a reinstatement of the Highest as Being, and not as Bhavat.

In the later Isā and Māṇḍūkya Upaniṣads, later I deem by several generations, later than the beginnings of Buddhism, we see implicit the confession, that this matter of becoming versus being had evolved into a battlecry in religious debate, becoming being now termed sambhūti, a term which I do not find in the older Upaniṣads. Becoming is now reduced to mean, not exercise of an ever new Manifold in That who is, but an originating from that which was not—which is a different thing; and as involving a

1. I am aware that the Maitri is said to quote the Isā (7.11), but this is only in the admittedly later Khilas, or 6th and 7th Sections.

complement of decay, which is a different thing. And in the comment of Gaudapāda, which Deussen's biassed zeal forces upon readers of his Upaniṣad translation, we are landed in the view which sees, in the manifold and becoming, illusion, and that what really is cannot become, becoming in truth being only of what is there already. In the Iśā, while there is the seed of decay of faith in becoming, in that it is viewed as involving passing away, we yet retain the faith, that the man "in becoming wins the goal." Here then is a becoming which, being of what is by nature divine, does not involve decay subsequent to maturity. In the Māṇdūkya commentary, the halting logic of the Iṣā is purged, but at the fearful cost of voting becoming in the very man, the self, to be an illusion. And this coupling decay with becoming appears, a source of bane, in Buddhism.

When all is said however, the commentator remains as one who sees worth in the Less and the Worse. For they, that is, their age has no longer understood the real message round which the Sayings on which they comment were uttered. So they fall back on less direct, and weaker meanings of words. Thus through

them the strong causative of bhū is veiled under the idea of foster or cherish, as in Aitareyya 4, 2, 3. And elsewhere are such weaker renderings, as "propitiating", "comforting", "pleasing" the devas, of this same causative, with which the strong bhāvaya has, in the first instance, nothing to do. Why should we really feel compelled to fall back on such derivative renderings? In the Aitareya, the mother is "making her embryo become"—that is all in order. But why should we not also make devas become, that is, be More, Better than they were, and they make us the same? The Vedic scholar with a pantheon of "gods" filling the picture, may smile. But the passage I have in mind, to which my colleague, Dr. W. Stede has drawn my attention:

devān bhāvayatānena te devā bhāvayantu vah,

Parasparam bhāvayantaḥ śreyaḥ param avāpsyatha, which my colleague Dr. Barnett has rendered: "With this comfort ye the gods and let the gods comfort you, etc. . . . is from the Gītā (III, 11), in a context reckoned as a later interpellation by Garbe. By that time devas were, as we have them in early Buddhist tradition, virtually the wise and kindly gentlemen who had passed for a while from earth to the next world, and often came back to those who were yet on earth either to give or to receive good counsel and who were very likely, their life-span over, coming back again to earth in the long Marga of each man's becoming. Thus the mutual making-to-become in the More towards the Most is a very reasonable advice.

But a less wholesome expression crept up and is also visible in those passages judged by the same able critic to be later. This is the term brahmabhūta: become-the-Most.¹ The term may, like other affixes: —maya, —gata, have come at some time to express our 'of the nature of', or 'akin to'. But we do not find this compound in earlier Vedic, and in these probably early instances it

1. Bhagavadgītā 5, 24; 6, 27; 18, 54,

seems highly significant, namely, that the happy states of the Yogi consists, among other features, in his "heing brahmableta." Here we have, as it were, said farewell to the healthy state of willing to become, of living in that willing, and thereby becoming step by step as far Brahma-wards as it is given any man, however saintly, to become on earth. The one-in-nature with the Most: is realized, but to the exclusion of any emphasis on, any joy in, the becoming More on the Way to the Most. It is a premature value, in the "done"; and again—another later symptom—it is value in the Idea, rather than the Thing; and that means that the man is holding himself in worth as mind, rather than as he who is minding. As we should expect, the mind-ridden monasticism of early: Budy dhism shared in the expression, calling both the recluse and its founder Brahmabhūta,

"experiencing happiness dwells with the self become-Brahman."

But whereas the Buddhist came to slur over, and finally lose sight of, this once vital phrase, the Vedântist saw in it only the idea of identity, losing sight of the needed making-actual the potential oneness. The commentators' tradition no longer values the idea or the word bhavat, or its causative, in its earlier meaning, nor for that matter do we either, and so we too, I venture to think, fail either to see, or to value what the original utterers were, it may be, trying to say.

And this was, not the "thou art That" in the preposterous sense of the one term equating the other in any complete sense of the word, but the Tat tvam asi only where both asi and bhavasi coincide, both in the spirit and in the letter: Tat: tvam bhavisyati Only in becoming the More, with the will ever working, will the man ultimately "be" in and as the Most. In such holy becoming

- 1. Majjhima, 1, 341 f; 412; Anguttara, II, 206, 111; etc.:
- 2. As G. Radhakrishnan well says: "The God-in-man is a task as well as a fact." Philosophy of the Upanisads.

there is no complementary decay to follow, as in things material; it is a Becoming-other in the More and the Many, which, in virtue of the man being the Self in-the-Most only potentially, or in the germ, is in his case of necessity a becoming less imperfect. But it is little wonder that we so veil this word of the life-career in, not body or mind, but the very purusa when that purusa himself we of to-day keep so in the background. And we had not else so lost sight of the Becoming which was what the Sakyamuni was trying to say in his Way-figure, and for which India's mediaeval manuals blamed his followers, the Bauddhas, the Saugatas. For these followers had themselves lost the message of Becoming in the greater sense, just as their critics saw in it only an impossible becoming out of nothing.

C. A. F. Rhys Davids.

THE POURPOLD ASPECT OF THE BEING IN MANICHAEISM.

A. V. Williams Jackson,

Columbia University, New York City, U. S. A.

Some hesitation is felt in offering to a great master like Sir George A. Grierson a small contribution on a subject relating to Manichaeism, but all matters concerning the Middle East come within the field of his profound erudition. Moreover, India (that is, Northern India) is included by AlbIrūnI, together with China (or Chinese Turkistan), as among the regions in which Mani preached his gospel while in exile from Persia. The theme chosen here for presentation relates to a tenet in MānI's religion with regard to the four chief aspects of the Godhead.

We are familiar with an expression in the Greek Formula of Abjuration which accurately refers to the God of Mānī as 'The Father of Greatness with four faces (i. e. aspects).'2 This striking attribute represents the divine figure as four fold in his majesty.

- 1. Sachau, Chronology of Ancient Nations by Albīrūnī, p. 192. Some scholars are inclined to doubt Albiruni's statement as to India, but I feel no hesitation in accepting it so far as Northern India is concerned.
- 2. Gk. Formula § 2, see K. Kessler, Mani, p. 403 (text), 359 (transl.), cf. also Migne, Patrologia Graeca, 1. col. 1461.
- 3. For the adjective $\gamma_{\epsilon} \tau_{\rho} \alpha \pi_{\rho} \delta \sigma_{\omega} \kappa_{\rho} \delta$, there are three renderings possible: -(1) 'of four faces', (2) 'of four aspects', (3) '(consisting) of four persons'. Something, perhaps, might be urged in favour of the third (3) meaning, because the noun $\pi_{\rho} \delta \sigma_{\omega} \kappa_{\rho} \omega$ (Lat. persona), in the sense of 'person, personality,' is a synonym of $\delta \pi_{\rho} \delta \sigma_{\omega} \kappa_{\rho} \delta \sigma_{\omega} \delta$, in which case the four 'persons'

Its connotation agrees exactly with the aspects of the Godhead presented in the Turfan Fragments and in the non-Manichaean sources, as given below.

Thus, for example, in the Turfan Pahlavi Manichaean texts we have at least three (or four) passages which present the Supreme Being in his fourfold aspect of divinity, light, power, and wisdom. The passages are in full accord, the only divergences being slight variations due to the use of the dialect, southwestern or northern, as respectively employed in the two latter cited and in the first. The three passages referred to will be found, with comments, in my forthcoming volume (in the

(three phases of the divine personality being added as parts to the whole) would make up a supreme Tetrad. Compare, somewhat similarly, Legge, Forerunners and Rivals of Christianity, 2.322. I so, we might compare Augustine, Contra Faustum, 20.7, end (cf. 20.6, end), as cited somewhat below. But on the whole it seems preferable to adopt the first (1) meaning, 'fourfaced', supplemented by the implied idea (2) of 'aspect'. This interpretation appears to be borne out by a reference to such a conception in TPhl. Frag. M. Pers. 1, 1-3, cahar qanārag...Pid 'i Vazurgii, 'Father of Greatness... four sides (i. e. in four directions). See Müller, Handschriftenreste, 1904, p. 250, in Sitzb. Akad. Wiss. Berlin, 1904. Indirectly, and simply as a parallel, we may recall in Hinduism the epithet of Brahma as 'Four-faced' (Skt. catur-ānana, caturmukha).

4. Thus in the last two lines below quoted, we have the southwestern dialect, characterized particularly by Zarvān (as Deity, Zōr, Vaḥīh, in contrast to the northern dialectic equivalents, Bē, zāvar, Zirēft, for God, Power, and Wisdom. Concerning such dialectic variations, especially S. W. dial. Zarvān, consult (quoting the authority of Andreas) Waldschmidt and Lentz, Die Stellung Jesu (1926), p. 71 middle, and elsewhere.

press) on Researches in Manichaeism, Study IV, note on Frag. S. 7 d. 13, published by the Columbia University Press. They are first these, each with a reference to the texts published by F. W. K. Müller, in Abhandlungen der Preuss. Akad. der Wissenschaft, Berlin, 1904 ('Handschriften reste_aus Turfan') and ('Eine Hermasstelle in Manichäischer Version'), in the same Academy's transactions (SPAW), Berlin, 1905, to be tabulated as follows:—

Add to these likewise a fourth citation, petitional also in its content, found at the beginning of a Turkish Manichaean Hymn, T II D, 162, lines 1—2, which opens with this fourfold group of aspects of the Supreme Being in Turfan Pahlavi, giving them then in the next line with their Turkish equivalents, before proceeding with the Hymn. The two initial, bilingual, lines of its beginning state that it is 'A Hymn to'

- B (a)γ, Rōšan, Zaw(a)r, Žirift, nung bašta. t(à)ngri y(a)ruq küclüg bilgä⁵.
- 5. For the text see A. V. Le Coq, Türkische Manichaica ans Chotscho, 2. p. 10, in Abh. d Preuss. Akad. d. Wiss., Berlin, 1919. A reminiscence of this same tetrad is also preserved in a later Turkish (Uigurian) blessing (TM. 417 end) which is invoked upon the new monarch Iduq-qut (see Le Coq, Türk. Man. 3. p. 34, lines 29—24). This invocation closes with the benediction: 'Max there come the Four Light Princely Gods, (manifested through) the Burkhans (Spiritual Messengers), mighty in prayer in the ten regions (of the heavens).' If I rightly interpret, the divine tetrad is manifested likewise in its inspired Messengers who appear from time to time. We may, therefore, possibly see in this clause an allusion also, as elsewhere in the

Furthermore, in the Turkish Confession. Prayer (Khuastuanift=xvāstavānīft, 'self-confession, lines 177—183)*, the fourfold aspect of the Supreme Being is also symbolized in the Four Light (or Bright) Seals 'that are to be kept in the heart of the true believer, namely:

Four Light Seals (tört y(a) ruk tamya) have we sealed in our hearts. (1) One is Love, (and that is) the seal of Azru a the God. (2) The second (is) Faith, the seal of the God of the Sun and the Moon. (3) The third is the Fear of God, (and this is) the seal of the Five fold God (i. e. Primal Man, Ormazd). (4) The fourth is the wise Knowledge, the seal of the Burkhans (or Divine Revealers of Religion).

It is clear from this passage that the Godhead himself is indicated by the confession of love for Azrua; his Light by an expression of faith in the Sun and Moon; his Power by sealing in the heart a reverence for Primal Man as a celestial force; and his Wisdom, by believing in the existence of Divine Messengers (Burkhans) who from time to time bring inspired knowledge into the world.

Manichaean Fragments, to Zoroaster, Buddha, Jesus, and Mani, as the messengers of divinity, especially because the Burkhans 'change their names and forms.' For the Turkish text of the latter quotation see Le Coq, Türk. Man. 3. p. 34, lines 6-7, bottom.

- 6. An etymological explanation of this designation is already prepared for printing, and it is hoped that it may appear some time later.
- 7. See Jackson, Journ. Roy. Asiat. Soc., 44. p. 69 ff. with full references.
 - 8. Consult again, with references, op. cit. p. 69 etc.

Next, in a C h i n e s e Manichaean Fragment, discovered by Pelliot (see JA, 1913, p. 105, 116), the divine personality in his fourfold form is undoubtedly referred to as 'the Four Calm Bodies of the Law, which Four Bodies of the Law are (rest wanting).' It is quite certain moreover, that there is an allusion to the tetrad in the Chinese Manichaean Treatise as well. The passage in question (JA. 1911, p. 552) speaks of 'the Three Permanences and the Five Greatnesses (i.e. members) of the Great Light.' Here it is evident that these three abiding attributes of the Godhead are Light, Power, and Wisdom, which, combined with himself, make up his fourfold aspect as the Supreme Being. Furthermore, we may similarly interpret a thrice-repeated reference to the Four Calm Bodies in the long Chinese hymn in praise of Jesus (H. 27d, 38d, 56b, c).11

We may now turn to a couple of passages in the indirect sources relating to this Manichaean tenet. An Arabic reference in an-Nadīm's Fihrist is important because it defines each of these divine aspects more fully, quoting from Mānī kimself. According to an-Nadīm's statement Mani enjoined four spiritual precepts that were to be accepted by all believers, in addition to the three seals of conduct and his ten commandments.¹² These four injunctions are summed up in the following words:

'Belief in the Four Great Majesties (lit. Greatnesses), namely, (1) God, (2) his Light,

^{9.} See Pelliot, JA. 1913. p. 105, 116. and consult Jackson, JAOS, 44. 70-71.

^{10.} Chavannes and Pelliot, JA. 1911, p. 522 n. l, also interpret the allusion in this manner.

^{11.} See the Chinese text, with translation, in Waldschmidt and Lentz, Die Stellung Jesu, p. 102, 104, 107.

^{12.} Cf. Jackson, JAOS. 44.70.

(3) his Power, and (4) his Wisdom. Now, (1) God, whose name is glorious, is the King of the Paradises of Light; (2) his Light is the Sun and the Moon; (3) his Power is the Five Angels, namely, the Zephyr (ether), Wind, Light, Water, and Fire; (4) his Wisdom, the Holy Religion.' (This last clause is further explained as referring to the revealers and exemplars of the faith.)¹⁸

Saint Augustine hints at the same idea of the divine tetrad when he represents Faustus as trying to adapt Mani's fourfold notion to that of the Christian Trinity (Contra Faustum, 20. seq). According to the Manichaean spokesman the Father dwells in the 'light inaccessible'; the Son, being twofold, has his station in the sun and the moton; the Holy Spirit (cf. the Living Spirit in Manichaeism) resides in the whole circle of the air. Faustus, in his argument, is made to explain the second member in the following manner: 'Since the Son is himself t wofold - just as the Apostle (i. e. Paul) recognized him to be, when he said "Christ is the power of God and the wisdom of God-We (Manichaeans) believe that his Power dwells in the son and his Wisdom in the moon' (C. F. 20.2; New Test. and see Cor. 1.24). In refutation the Christian Father argues at length to show the fallacy of this distribution of the divine power and wisdom. and condemns the whole nation as being 'a threefold or rather a fourfold fiction' (ibid. 20.6, 7, 8). In any case, Augustine's long argument shows that he recognized this tenet of Deity, Light, Power, and Wisdom as an article of Mani's creed.11

Furthermore, we should observe that several times in the

^{13.} See G. Flügel, Mani, p. 64 (text, 9.5 (transl.); id. complete edition of the Fihrist text, 1. p. 333.

^{13.} See Aug. Contra Faust. 1. 1-8, Migne, Patr. Lat. 42 Cf. also F. C. Baur, Das Manichäische Religions system. p. 206-207.

Turfan Pahlavi texts this fourfold group of divine aspects is referred to under the comprehensive designation faraḥān, 'the Glories', that is, of the Supreme Being, and are associated with 'Angels and Spirits' (prēstagān 'ūd vāxšān).13 Thus, for example, the 'Glories' (paraḥ'ān, etc.) in M. 4 d 11-14 (=Mü. p. 55), 'May new blessing and new triumph come from the divinity Zarvān, above the "Glories", and Angels, (and) Spirits of this Realm,'

(nog āfrīn nog pērozīh āyād az bē Zarvān abar paraḥ'ān 'ūd prēstagān vāxšān 'íg 'in šaḥr). Similarly, from the same hymn and prayer M. 4 e 22-23 (Mü. p. 57 mid.) may be cited: āvarēd paraḥān vāšān, 'ūd zōrān; padīrēd dašn, 'come hither ye Glories, Spirits, and Powers.' Still farther on in this devotional text, M. 4 f. 19-21 (=Mū. p. 57 mid.), directly after invoking a blessing upon Mānī and paying homage to Great Shining Glory (i. e. Zarvān), the true believer further expresses his faith: 'I believe in Holy Spirit

(vāxš yōzdahr). together with the Glories (abāg paraḥān) and the powerful Angels (prēstagān abzārān.') In a different text, M. 43 recto, lines 7.8 (=Mu. p. 78 bot), which contains an address made by the Manichaean Community to an Uigurian Khan, we read: 'May the Deed-accomplishing Ones (qērdagārān, here-Angels), the Glories (faraḥān), (and) the Spirits (vāxšān), bestow blessing upon thee, the ruler.' Lastly, in a prayer, M. 543 verso, lines 69 (=Mü. p. 80 top), we find in an ascending order, 'Angels—Spirits—Glories (prēstagān vāxšān—pariḥān)'

For the sake of completeness, or only as an indirect parallel, we may add that two Syriac writers of the fifth century A. D.,

- 15. See also the observations in my book (in the press) Researches in Manichaeism, Study IV, note on pryh (farch in Fragment S. 7 a 9 (second paragraph),
- 16. In (parīḥān (for the more common paraḥān) the vowel is merely an anaptytic vowel, being found also in a number of other words.

namely Adhurhormizd and Theodore bar Khoni, allude to a nome-what similar fourfold division as being recognized by Zoroastrians in Sasanian times, the context in each case showing that it is the Zarvanite doctrine to which reference is made. The names in the tetrad mentioned are given as Ashōkar, Frashōkar, Zarokar, Zarwān. The last one certainly corresponds to Zarvān, which, as as we have seen, stands first in Mānī's fourfold group; but it is difficult to equate the other three (despite their evident Iranian chracter) with corresponding members of his tetrad.

Both Syriac writers give the four nomes in identical forms and in the same order, with Zarwan last. Thus Adhurhormizd (d. 447 A. D.), who was a Christian convert from Magism, attacks the Zoroastrians for counting as gods, 'A s h h ō q a r, F r a s h ōqar, Zaroqar, and Zarwān' (see the German translation by Nöldeke, in Festgruss an Rudolf von Roth, p. 35, Stuttgart, 1893): compare also the remarks and references by F. Cumont, Recherches sur le Manichéisme I, p. 8 n. 2, Brussels, 1903; consult likewise an English translation of the passage by J. F. Blue. 'The Zarvanite System', in Indo-Iranian Studies In Honour of Dastur D. P. Sanjana, p. 67-68, London, 1925. In like manner Theodore bar Khoni, ed Pognon, p. 111 (text) 162 (transl.), asserts that 'the Magian Zoroaster set up at the beginning, four qrinciples as the four elements (namely) Ashoqar. Frashogar, Zarogar, and Zarwan, 'and he says that Zrrwan was the father of Ormazd.' See likewise transl. by A. Yohannan, in Journ. Amer. Or. Soc. (1923) 43. p. 240, with n. 4. Compare, in general, W. Bousset, Hauptprobleme der Gnosis, p. 89-90, 236-237, Göttingen, 1907. In both these Syriac allusions, remarked above, the name Zarwan comes last in order, and reference has been made to the difficulty of equating the other three personifications with those in the Manichaean tetrad, as further noted in the next paragraph.

From the material presented above, we may rest assured that Māni demanded of the faithful a belief in this cardinal tenet of the Godhead as possessing four aspects, Divinity, Light, Fower, and Wisdom. (See also appended Table). It was natural, therefore, as already shown by the anathema against it in the Greek Formula of Abjuration, that a recantation of this special dogma was among the very first exacted of those who adopted the Christian religion.

Etymologically these three terms in Syriac are plainly Iranian names, and a derivation for each of the first two can readily be given. From the language of the Avesta and from Pahlavi we know that Ašōqar would signify 'Making Righteousness'; and Frašōqar, 'Making (the world) advanced to Perfection.' The derivation of Zarōqar, however, has not yet been made clear. Possibly (but only as a guess) we might suggest vocalizing the unpointed Syriac term, since it is Iranian, as z (i)rōqar, instead of z (a) rōqar, and consider the word to mean 'Making wise.' It would then match with the Manichean epithet zireft, 'wisdom' which is itself an abstract derivative from Tphl. zīr or zir, 'wise' (dialectic variants), cf. Av. jīra, jīra- 'wise, intelligent.' But the long vowel in Tphl. renders the conjecture somewhat uncertain.

Merely as a corollary in regard to the general subject of tetrads, but not for comparison, we may observe that in later times (i. e. first part of the sixth century A D.) the Persian heretic Mazdak recognized 'four forces' (Discrimination, Insight, Memory Joy) as a fundamental part of the divine power. Although Mazdak shows numerous traces of the influence of Māni (who lived three centuries earlier), the four abstractions just cited bear no special relation to the Manichaean tetrad. For a German translation of this passage in Shahristāni, see Haarbrücke 1.192.

Four Calm Bodies of Law (Religion)

An Nadīm's Fihrist — Mānī's first Precept enjoins belief in

Allah	Nür u-bu	Quwwat u hu	Hikma u-hu
God	His Light	His Power	His Wisdom

(Fihrist further interpretation=)

1. God - King of the Paradise of Light

2. Light-of the Sun and the Moon

3. The Five Angels: Zephyr, Wind, Light, Water, Fire (cf. TPhl etc. Fragments)

4. Wisdom - the Holy Religion - through inspired Teachers
(i. e. Burkhans, or Divine Messengers)

a. Teachers,—who are Sons of Intellect

b. Those who are enlightened by the Sun - Sons of Know-ledge.

Presbyters, - who are Sons of Understanding.

d. Elect (Faithful), - who are Sons of Discretion (Mystery)

e. Hearers (Auditors),—who are Sons of Insight (Discrenment)

St. Augustine, 'Against Faustus'
Relating to the Godhead as Light, Power, Wisdom

(S y r i a c Allusions to)—Ašōqur, Frakōqar, Zarōqar, Zarwān (in late Zoroastrianism)

AFFIRMATIVE AND INTERROGATIVE SENTENCES IN TIBETAN.

Max Walleser (Heidelberg).

It is a well known phenomenon of the written Tibetan language that the principal sentences generally terminate with the vowel o- and the interrogative ones with -am, whilst the subordinate clauses mostly terminate with -e, this being the termination of the gerund-participle -ste, -te, -de, with which subordinate sentences of past action are joined in most cases to the following principal ones. Jaeschke, in his Tibetan Grammar (1883). § 34.

1, gives the following rule: "The principal, verb of a sentence, which always closes it (§ 48) receives in written Tibetan in most cases a certain mark, by which the end of a period may be known. This is, in affirmative sentences, the vowel o (called by the grammarians:-star sdu ba), in interrogative ones, the syllable am.'"

Before both the closing consonant of the verb is repeated, or, if it ends with a vowel, ho and ham are written." There are certain cases - Jaeschke enumerates five of them - where these additional syllables are omitted.

The same thing has been said, after Czoma di Körösi, by l. I. Schmidt in his "Grammatik der tibetischen Sprache' (1839) in this manner:—"Den Schlu der periode bildet die Copula ho mit Wiederholung des Schlubkonsonanten der letzten Silve der periode". Foucaux, Grammaire de la langue tibetaine (1858) p. 64, gives the same rule with ithe following words: "Ces mêmes verbes s'emploient souvent en redoublant leur lettre finale avec la particule ho.... La particule ho, seule ou ajoutéeà la consonne finale répétéedu mot qut précède, peut exprimer le verbe etre

^{1.} For the rules of native grammarians cf. Schubert, Tibetische National grammatik. (Mitteilungen des Seminars für orientalische Sprachen, Berlin, vol. XXXII, 1929), p. 53.

avec toutes sortes de noms". We may add at once that this last interpretation of the termination-ha by the verb "to be" does not seem to be correct in so far as there is no special meaning contained in the terminating vowel and that thus Foucaux's explanation is not only too wide but totally fails its aim.

How is this rather curious linguistical fact, parallels to which have scarcely ever been stated in any other language, to be explained? The answer to this question can perhaps be given, if we rightly understand the note belonging to § 34 of Jaeschke's Grammar where the author speaks about the modern use as to the formation of affirmative and interrogative sentences. He says: "In conversation the o is generally omitted, and the m of the interrogative termination is dropped, so that merely the vowel a is heard, e. g. the question mithon nam, "do you see?" and the answer mthon no, "(I) see", are commonly spoken in W. T.: t'on na? t'on.

May we really suppose that so radical a change has taken place between the moment of fixing the orthography and modern times ? Or is it not more probable that the old pronunciation did not differ in this point from the modern one, and that the difference is rather one of writing, or rather of internal hearing, in so far as the originators of the Tibetan orthography in the seventh century A. D. did express not only what they heard from others who were pronouncing, but also those somewhat more indiscriminate sounds which they heard while observing the sound-articulations of their own in repeating those kinds of sentences for thembut articulating them) selves (although while writing tried elsewhere 1 to show that the kind them down. I have writing introduced by Indian Pandits in of Tibet, was extraordinarily exact, considering not the real only

sounds which were heard, but also those vanishing and disappearing noises which are caused by the movements of the other parts and organs of the mouth besides the one which is to be regarded as the principal source of a special sound. In a similar way I hope to have proved with sufficiant reasons, that the so-called superscribed and subscribed letters as in sbr, which are generally transcrib ed by putting them after one another : sbr., instead of above one another b, have been pronounced simultaneously, so that there is one single sound, but consisting out of two or more sounds or rather articulations, formed at different places of articulation and mixing together into one special kind of consonant which contains the elements of two or three consonants without being similar to any one of them. So it may be, that sbran-bu, which now-adays, "according to Jaeschke's Dictionary, is generally pronounced dan-bu with "cerebral" d, may have had this pronunciation already in the time, when the orthography was fixed, and that this is to be explained by the fact that the writing did not try to render directly the auditive impression, but the characteristic kind of articulation as well, which, if well understood, will not leave any doubt as to the exact pronunciation of the written sounds nor to the auditive impression, which it leaves in the hearing individual. If we are allowed to suppose that the phonetical culture of the Pandits who were engaged in fixing the Tibetan language in written characters for the first time, was high enough as to allow them a free use of those principles which Jespersen and his colleagues in phonetics hold to be necessary in writing down phonetical texts to day, especially such of till now unfixed dialects and languages, we may presume as well, that with the strange rules about ending principal clauses with o- and interrogative ones with am they have, unconsciously perhaps, fixed the natural laws that direct the musical movement of the voice in differentiating the expression for assertion and interrogation.

If we take our issue from this proposition, we may come to the following results.

It is a well known linguistic fact, that, whenever an asserting sentence is being finished, the voice sinks down, before it totally vanishes. Now this last expiring of voice may be expressed by a vowel-sound corresponding to o. On the other hand, if there is a subordinate sentence preceding the principal one, the voice rises to a certain pitch, which may be the highest one generally reached by the pronouncing individual. e. g. in the sentence: "If you are sick you must go to the physician," the musical intonation is rising as far as the end of the conditional proposition, while it reaches its deepest tone at the termination of the whole sentence. Now, if the mouth were closed immediately after pronouncing the last sound of the sentence, it would be difficult to understand that there is still an o to be heard. But—and this is curious enough. although scarcely to be doubted at—the lips are not shut immediately, in the German language as little as in the English one, and, we may presume in the Tibetan as well. In every case the last consonant, and especially the explosives, must have their final explosion of a kind of vocalic character, which will have, as has been shown above, the greatest similarity with an indistinct o.

Now, if this theory of considering the Tibetan rules about the terminations of affirmative sentences hits the mark, we may confide to have found the clue for understanding those about the interrogative sentences. While comparing the musical intonations of this kind of sentences in European languages we may note at once, that here the musical accentuation is rising till reaching its highest pitch with the last utterance of voice. The termination of the question and the expectation of an answer may be specially marked by closing the mouth in order to show, that the questioning person has got nothing more to say himself and that he expects an immediate answer from the other. This, too,

is a linguistic fact, which, although perhaps never before stated in this crude form, may be proved experimentally by any one. who is somewhat accustomed to experimentally observing the articulatory movements executed by the speech-organs of one's own. It may be, that, after a question, the mouth is not always and absolutely shut. But, we may add, in this case the question is not a peremptory one, it still has the character of balancing and of doubt, and, in every case, the questioned person will earnestly feel moved to reply only when seeing and hearing, that her interlocution has entirely finished speaking and eagerly wasts for a reply. This shutting of the mouth is represented by the termina-(with a labial-nasal) in interrogative sentences in tion am In the case, too, the vowel of the terminating syllable Tibetan is nothing but the indistinct noice which is heard also in the Indian pronunciation of Sanskrit a at the end of words, where, as every one knows, we generally do not hear any vowel-sound at all. as is sufficiently proved by the writing of words like Vasudev (instead of -deva) without the terminating a which is really nearly inaudible, but not totally wanting. There is always some weak vocalie noise at the end, as is shown by the voice-character of the last consonant, e. g. v in our example Vasudev. This very weak voice sound is nothing else but the sound represented by Sanskrit a. which in opposition to all the other vowels, is designated by Panini as well as by the native grammarians generally, as narrow (samurta) while all the others are said to be open (vivrta). Of course this sound cannot be what we generally mean by a, but it is rather the indistinct vowel-sound known in other Indo-European languages as well and called here shwa indogermanicum, in imitation of the shwa known in Semitic languages.1

^{1.} Cf. M. Walleser, 'Zur Aussprache von skr. a' Zeitschr, f. Indologie Iranistik, Vol. V (1927) p. 197.

We may understand now better, why a quite disappearing noise which in the transcription of languages and dialects is mostly not taken care of, has not only been noted in the Tibetan alphabet which had—as we already observed—the perference of having been formed by the very best practicians in phonolgy and phonetics, but that it has bestowed even the fundament for differentiations in sentence intonation which in no other language have ever been marked. It is true, the musical accent is given in a few other languages as well, e. g. the Vedic Sanskrit and the Greek of the Alexandrian grammarians by the use of "accents", and in Chinese by the different "tones" (shêng) introduced by Indian Pandits together with the "rhyme-tables" in the sixth century A. D.

But all these notations consider only the word-accent. The sentence intonation, i. e. the rising and lowering of the musical flowing of the spoken language, escapes even much easier the attempts of being grasped, as it is not combined with single words but depends entirely on the special aim and meaning, in which the sentence is pronounced. Thus the difference of the assertion "You are ill" and the question: You are ill?" consisting in the lowering of the voice in the first case, and in rising it in the second, is marked only in Tibetan by changing the terminating syllable of the sentence into o or am although the distinction may be so slender that the ear of the modern foreigner and perhaps even of the native (viz. if there has not been a systmatical intstruction in observing even the slightest alterations in pronouncing) does not remark it, as we have seen above.

Also the conclusions to be drawn from a comparison of modern Tibetan dialects, a number of which are represented in patterns

^{1,} Cf. B.Karlgren, Thonolfgie chinoise (1915) p. 29 f.

in Grierson's Linguiste Survey of India, Vol. III, Tibeto-Burman family, Part I, Tibeto-Himalayan group, tend to the same results. Here we find that in none of the patterns of modern dialects there is ever taken notice of a differentiation between positive and interrogative sentences as to the termination with the exception of two, those of Lahul (p. 71) and of Khams (p. 138), both of which have been noted by Jaeschke. I am sorry to say that neither of these two samples can be acknowledged to be an unobjectionable rendering of the special dialect, as they contain, not like the others, stories of common use, but a Buddhist scriptural text evidently taken from a Sutra contained in the bKah-hgyur collection and read aloud by one conversant with the concerning dialect with the phonetic peculiarities of even this dialect. The text itself, with its succession of words and synthetical constructions, is in both cases identical so that there can be no doubt that here we have no idiomatic examples of dialects at all. Consequently we must not wonder if here the terminations in -o have been taken over from their scriptural source and that their pronunciation is also marked by -o. We can confidently say that this pronunciation is rather artificial and cannot be regarded as a proof for its effectual existence in the dialects of Lahul and Khams. This supposition may be strengthened by the circumstance that also in the newest grammars of the chief dialect of the Tibetan language, which at the same time is the one used all over the country as the lingua franca-I, but refer to Ch. Grammar of colloquial Tibetan.—there is no-Bell. where spoken of those terminations in o or am, neither do the numerious examples of idiomatic Tibetan sentences given there betray with a syllable that anyhow they may be pronounced to-day.

^{1.} As to the specimen for the Central Dialect (p. 79) communicated by Mr. David Macdonald and Col. Waddell from the State Sikkim (1899), it is taken from the translation of the Bible and must be considered after the principles prevailing there,

It is true that the Tibetan translations of the Bible and especially of the New Testament observe strictly the use of final o and am with the exception of metrical passages.

Of course, all these seeming exceptions from the rule generally observed are to be explained by the fact that these translations of the Bible have been modelled exactly after the patterns given by the doctrine of Buddha in the translations of the bkah-hgyur. In this respect the learned and sacred language of the Buddhist tradition has proved superior to the newly invading Christendom by imparting to it not only its elevated style of diction and its venerable language of an age long passed by, but also those old-fashioned peculiarities of pronunciation which no-body to-day would introduce from plainly considering the spoken language, if there were not the unwritten law of religious style and diction which commands the employment of peculiarities elsewhere out of use.

I should not like to conclude this short study without pointing towards the exactness and acuteness of the Tibetan orthography which often unfolds characteristics of the spoken language which even to the phonologically practised scholar are not immediately perceivable. So I may refer to the phonema of "complex" consonants about which I have treated in my paper "Zur Aussprache des Sanskrit und Tibetischen" (Heidelberg 1926) and which are represented in Tibetan (as well as partly in Sanskrit) by superscribing and subscribing letters to one another. As this theory has found

E. g. Gospel of St. Matthew, Shanghai (1908) p. 3 (11.6), p. 25. (XI, 11). p. 27 (XII, 18, 21). p. 37 (XV. 8, 9). p. 53 (XXI, 43). St. Mark p. 1 (I, 243). p. 18 (VII, 7), p. 33 (XII, 10, 11). St Luke p. 3 (I, 47-55), p. 5 (I, 68-79), p. 7 (II. 29 32), f. 9 (III. 4-5) etc.

some difficulty in making itself intelligible, I beg to adduce here one more proof which will perhaps convince even those adversaries who till now appear inacceessible to reasons and arguments drawn cheifly from Sanskrit correspondences of Tibetan phonoumena.

It consists in what follows.

In his attempt ("Versuch") on Tibetan-Chinese word equations Dr. W. Simon advances the somewhat striking assertion (p. 186) that r and l to be met with at the beginning of Tibetan words are not "prefixes" but "transposed sounds" (" versetzte Laute"). I am not disposed to quarrel here about the conception of "prefixes" which may admit some doubts both as to their pronunciation (phonetic value) and to their historical explanation. What I wish to emphasize here is only the character of these sounds as of such which are not to be treated as individual and independent ones but rather as intimately combined with the primary sounds to which they are joined. I have elsewhere proposed for these super and subscribed letters the designation of "complex consonants" wishing herewith to say that they influence the entire complex of sounds in forming out of it one single acoustic impression. although the articulating basis of this phonema may be divided according to the co-operation of the different organs of the mouth which all of them are to participate in giving any sound the special timbre which it has in the individual connection where it happens. About all the details of this theory I must refer the reader to look into my paper quoted above. Now I should like to come to meet Dr. Simon half way in admitting his proposition (which really I hold not to be proved) that there was a kind of metathesis ("eine der Aussprache- erlechterung dienende Lautversetzung") being the cause for speaking $l\hat{n}$ instead of (unproved!) $\tilde{n}l$

^{1.} Tibetisch-Chinesische Wortgleichungen. Mittiellungen des Seminars fur Orientalische-Sprachen, Berlin, XXXII. 1929, p. 157 ff.

or le instead of (unproved!) cl: Does Dr. Simon really think that such a "metathesis" which is required by him may take please without affecting intimately the sound across or round about which the "metathesis" is acting? Does he not see that we must nowadays, where the study of phonetics is advanced far enough as to request also the consideration of articulatory changes of secondary rank, consider not only the chief consonant which is generally heard and accordingly written in the plain phonetic transcription often thought sufficient for transcribing the sounds of languages, but also those vanishing and not always audible alterations of sound brought about by the position of the more or less inactive parts of mouth! I have laid stress elsewhere on the demand raised Jespersen¹ employ chiefly bv to for phonetic transcriptions no more single letters but a system of lines, each of which is destined for denoting all the alterations to which a single organ of sound-formation, e.g., the lips, the point of the tongue etc., may underlie successively during the whole process of articulating a text of sentences which are to be fixed by phonetical script. If Dr. Simon will think necessary to comply to this commanding request of phonology, how will he treat these consonants which are specially affected by this "metathesised" sounds, vis., those "across" or "through" or "above" which the metathesis is to take place? I think he will feel constrained to connotate in the graphical scheme drawn according to the requirements stated above the "metathesised" consonants together with their pertinent ones, that is to say, he will write these different articulations above one another exactly as is done in the Tibetan script with those consonants which are joined with superscribed r or 1. Properly said, it is not true at all that these two signs are preaxes in Tibetan, they are superscribed

^{1.} Grundfragen der Phonetic. (1904) p. 65 ff.

and this can mean only that they are pronounced at the same time with those sounds above the letters of which they are noted. If Dr. Simon will condescend to an understanding of these relations well known as for the rest to every one who has occupied himself a little with practical phonetics—there is no doubt he will find a much more satisfactory, solution for the difficulties which induced him to the somewhat peculiar assumption of a metathesis in cases where both the Tibetan and the Chinese development of sounds absolutely excludes such a process. And this is the case in almost all—if not all the sound-equations adduced by Dr. Simon in the second part (p. 186 ff.) of his paper.

I do not think that it will recommed itself to abide any longer with a phonetical fact which wants only to be earnestly considered in order to be assented to and I especially decline to give for the moment any instances for refuting the opinion of Dr. Simon. I even daresay that I should not have taken notice of this newest publication of Dr. Simon, if I did not see in it a radical mistake of its author who will but have to correct in order to give his equations a fundament better in every case than what he succeeded to give them till now.

Max Walleser.

SUBORDINATE CLAUSES IN TIBETAN

By

Max Walleser (Heidelberg)

In a paper about "Affirmative and interrogative sentences in Tibetan' I tried to show that the distinction of these in written Tibetan by the termination o and am is rather one of musical intonation than of sound-articulation. Now, I should like to prove that there is neither a differentiation between principal and subordinate clauses, in so far as the use of the particle -de, -te, -ste may be explained in a way that makes their distinction superfluous.

As to this particle, I. I. Schmidt in his "Grammatik der tibetischen Sprache" (1835), modelled after Csoma's Tibetan grammar, gives the following rules as to these particles (§41): "Die Partikeln te, de and ste, dem Participium Präsentis oder der Verbalwurzel angehängt, bilden... das Gerundium Präs.: z B hdug-ste sitzend; in gleicher Weise mit dem Part. Prät. verbunden bilden sie das Gerundium Prät. also smras-te gesagt habend". Of course, we cannot accept this formulation, as it contains a number of conceptions and grammatical definitions which are in contradiction not only with the general use of language but also with logic. We may but refer to the presumption that with gerund we understand the use, specially observed in Latin, of the infinitive of a verb in secondary cases or joined with prepositions as e.g. laborando "by working," so that the gerund may be considered as the ablative (or instrumental) of the infinitive laborare. It may be that the case form of the ablative

corresponds in certain meanings to the Tibetan termination -te etc., but there are, besides, so many differences as to the syntactical employment that it appears quite impossible to make use of this designation of gerund for the Tibetan termination -te etc. as well.

On the other side, it is as inadvisable to call it participle, as with this term we join the faculty of underlying the nominal flexion corresponding to the substantive noun to which the participle refers. As with Tib. te, ste, de there is no possibility of declination. we feel quite unacceptable as in the case of gerund, to call it participle, but it is not manageable neither, to call the verbal form to which the particle te etc., is affixed, "participle," as is done by Schmidt 1.2. who calls the verbal stem of hdug ste, vis., hdug, a participle. It is quite natural, and there ought not to be any necessity of discussion about this, that here like in many other cases we find in our grammar the use of grammatical terms and conceptions which are derived from the syntax of European languages, specially from the Latin one, without the legitimation to do so. As so many other uncultured languages among which the agglutinative are of a singular plainness and simplicity, the Tibetan is much too unartificial as to lend itself to an interpretation with the help of our grammatical categories. We must try to reduce the linguistic phenomena meeting us in this language to the plainest formula and then we shall see very soon, that neither the designation of "participle" nor that of "gerund" finds a place in the systematical arrangement of grammatical terms to be employed for this language.

It is now the same incongruity of Tibetan with our occidental language which prevents us from subscribing to Foucaux's formulation of the rule about the use of te, ste and de (Grammaire de la langue tibétane, 1858, § 73, p. 57)., On frome avec le participe présent ou le participe passé une espèce de locution absolue, en ajoutant à ces participes le signe de l'ablatif, de l'instrumental, du génitif ou du datif ___On obtient le même

sens avec les particules te, de et ste Exemples: smra ste "disant", source to "ayant dit." Here the formulation is much more convenient, as it avoids the use of the term "gerund". Notwithstanding, it appears to be objectionable in so far as it supposes the present stem smra and the perfect stem smras to be "participles", which they generally can become only by the addition of the "article" pa or ba, if we hold this change as sufficient for the designation of it as a participle. I think it will not only be better but the only possible way in order to get to a clearer understanding of the matter, if we entirely keep aloof from the conceptions of "gerund" and "participte" and restrain ourselves upon the plain and objective state of affairs in formulating the use of the particles with de, te, ste, thus that they are added respectively to the present or perfect stem of the verb which, according to the general use of the Tibetan language, has its place always at the end of the sentence.

After these observations about the theories of I. I. Schmidt and Foucaux we can be somewhat shorter as to the explanation given by Jaeschke in his Tibetan grammar § 41. Jaeschke has a much bettar understanding for the racial difference of the Tibetan language from our European ones and for the impossibility of employing the terms borrowed from the grammatical structure of the latter for designating syntactical relations found in the former. Thus Jaeschke knows quite well, that the formations with de, se, ste are neither gerunds nor participles and that it is but a kind of conventional designation helping us a little in the understanding of the meaning of those formations.

Thus he says (p. 55): "te (de etc.)... is added to the present root as well as to the perfect-root: gton ste "giving", but ste "having given", and stands for all clauses beginning with when, as, since, after etc. Also in the spoken language of (Western) (Tibet), it is used most frequently".

The linguistical fact spoken about proves thus to be of a

very plain kind. We may say, the ending to etc. is added to the verbal from which always stands at the end of the sentence and is identical with the verbal stem in so far as there are not finite forms derived with the help of verbal terminations, personal ones or others. So, as to the formal appearance, there does not exist any difference between principal sentences and subordinate ones. and we are permitted to consider the particle te etc. with the same right as co-cardinating conjuction and as a subordinating one. But if this is the case, it will recommend itself much more, to consider them as co-ordinate ones, because we have no inducement to complicate things more than they are by themselves. We know that only those languages which are of the most developed kind are provided with both co-ordinating and subordinating conjunctions, and there is of course no reason to attribute this predicate to a very poor and absolutely primitive language like the Tibetan one: syntactical distinctions which we know chiefly or exclusively from the Indo-European languages. We may add one more argument in favour of an explanation without subordinate sentences properly called. It seems that the meaning of a clause as of a subordinate one depends on the existence of conjunction at the beginning of it.1

Now, if Tib. te etc. has its place not at the beginning of the seemingly subordinate clause, but at the end of it, it is evidently not a subordinating conjunction at all, and as there is no conjunction, there is no subordinate clause neither and we may be more sure about it, as all the grammars quoted above are in concordance while speaking of "gerunds" of "supines", and it is a special merit of Jaeschke's to have laid stress upon the statement that these forms are only "substitutes for most of those subordinate clauses which we are accustomed to introduce by conjuctions".

1 With the exception of conditional and indirectly interrogative clauses which are sometimes marked as such by a metathesis of the verb, e. g. in modern German, English, French etc.

The conclusion which we are draw from these facts is the following:

In so far as the particles te, ste, de are appended to verbal stems, they may formally be designated as a kind of "gerund" or "supine", but only if these particles can be explained in the same manner as the gerunds and supiness known to us from other languages, vis. as casual terminations. If this is not possible. we shall have to consider them as particles used in the sense of co-ordinating conjunctions, by protracting them from the end of the preceding clause to the beginning of the next one. There is also of course a slight alteration of the signification of the participle, in so far as it gets now the meaning of "then", "there" or a similar one. The chief difficulty seems to be now: is a clause—in our case the preceding one-to be considered as such a one, if there is no finite verb, but only the verbal stem be it present, perfect or future -in its crude form? I think, we can answer to this question affirmatively, as this is thought quite sufficient in all the other kinds of clauses as well, and that thus we may confide to have found the right way in treating the problem as we have done.

Now, this fashion of seeing the matter would be much more satisfactory, if we succeeded to give the particles te, ste, de an etymological explanation which would correspond to the particular meaning implied in the one of a co-ordinate clause. And I think, indeed, we can risk an etymology without being obliged to take into account any factors not quite perspicuous to us.

A few words beforehand for making clear the etymological premisses which may help us to find out the original meaning of those particles.

We see also in other cases of a similar character an alternation of the initial consonants, e. g. in the beginning of the somewhat kindred particle cin which, according to the preceding con-

sonant, may be spelt (and pronounced cin, shin as well. Now, it is difficult, if not impossible, to decide which of these forms is the original one. One can presume that all these different forms may be equivalent in so far as the use of the one or the other depends exclusively on external circumstances (vis. the proceding sound), and if this particle cin etc -as is is really the case—can be found exclusively as a kind of suffix (and not as an independent word), we may even say, that is quite impossible to give one special form as the fundamental one, if we accidentally have not got a hint for choosing one of them as an appropriate one for etymological explanation, by reason of the similarity or identity with another word of the language, used in a similar meaning. Now, I do not think, that this be an easy thing in the case of cin etc., but among the three forms te, ste, de, there is at least one which is well known to us from its employment in the language, although the syntactical meaning does not seem at first sight to be quite the same. form is de, the well known demonstrative pronoun, or rather demonstrative particle, for it always needs a particular complement-case-ending or other-to get its character of a demonstrative pronoun.

This latter circumstance may indicate to us that really we have to do here not with a pronoun at all, but with a demonstrative particle de which we can put on the same level with the temporal particle da in da m "now". The alternation de: da may be proved by other examples, but of which, instantly, I do not know any one. But even if we must renounce to comparing de with da, it is sufficiently proved as a demonstrative particle of a similar meaning from the different composite forms of which it may be a component part. There are many cases—perhaps they form the majority of

all—were de may be considered directly as a preposition joined to the verbal stem in the meaning of a subject of the sentence e. g., the sentence given by Jaeschke § 41 A 1 (p. 55): phru gu chus khyer te chio "the child by the water (was) carried, it (de) died". It is true, there is one great difficulty with this way of viewing the matter, viz., to explain how it comes that after vowels we have the form ste and not de (e.g., in the sentence: "rgyal po ci ste rgyal sras kyis rgyal sa bzun no". But we may reckon here with the use of the suffix—s, added to the stem of verbs (in our example to ci so that it becomes cis) to designate the preterit (e.g., skyes from skye), and thus it would be quite natural that always there is a consonant s before the particle te, melting with the latter to ste after verbal stems terminating in a vowel.

Now, this explanation of the syntactical use of te, ste. de seems to agree exactly with the modern use of the syllable de in conjunction with the terminations nan, mkhan, pa or ba added to the root. Ch. Bell, in his "Grammar of colloquial Tibetan" (sec. ed. 1918) treats about this employment of de in the 6th chapter § 19 (p. 60) under the designation of "agentive participle" and gives among others the following example: "khas sa hgro nan (mkhan) ban chen de" "The messenger who went yesterday", or: "kas sa yi ge gton nan (mkhan) mi de", "The man who sent the letter yesterday". or "khas sa btan nahi (bahi) yi ye de", "The letter which was sent yesterday". Of course, these examples are not to be considered as syntactically quite equivalent. Here there is the genitive ending bahi before the noun in the sense of an attribute, as in the last example, we may think at once that the conjunction de is nothing but a postponed demonstrative pronoun by which the preceding noun is taken up again. But this may be the case in the other sentences as well, and then the characterisation by "agentive participle" is also corlanguage appears to have been larger, in so far as the participle de for te, sta according to sandhi rules) referred not to a single noun, but to the whole sentence. With other words: the particle de etc. was not used in its general meaning of a demonstrative pronoun, but rather in that of a particle of time: "then", or of locality: "there", So it may be regarded as a conjunction for co-ordinate sentences generally, but one which shifted to the use of a subordinating conjunction with the power to change the preceding sentences into a subordinate one, and thus we may acquiesce in acknowledging that the general use of former grammars which inclined to call te, de etc. a subordinative conjunction, was quite legitimate.

So we may recapitulate what we have said in the preceding pages in the following manner. We have got to distinguish a double use of de etc., 1) the one as a demonstrative pronoun, visible better in the modern use of it for forming the "agentive participle", as noted by Ch. Bell. and 2) the one as a demonstrative particle with the meaning of "then' or "there" which is to be considered as a coordinating conjunction, but shifting to the use of a postponed subordinative conjunction. How this double use of de is to be explained or brought upon one line, remains still open and will require some more research, and it will be appropriate, perhaps, to found it upon a study of the modern dialects of Tibet. There is no much probability, that the modern translations of the Bible will shed any more light upon this question as they are modelled chiefly after the old Buddhist translations of Indian texts-as we have shown in a former paper. And with the dialects there is the difficulty that we cannot always and everywhere state the identity of the forms current to-day with forms used in the literary language. Notwithstanding we may try to show, to which results such a comparing study will lead.

In the "General Introduction" to Grierson's "Linguistic Servey of India", Vol. III. Tibeto-Burman family. Part I. p. 28 we read: "Another common suffix is chas in BaltI. Other suffixes of the same kind are mkhan, te, ching, giz, etc. . . . Te is used after the consonants n, r, l and s. After d it is replaced by de, and after g, ng, b, m, and vowels by ste. It is the usual suffix of the conjunctive participle; thus btangste, "having given".

What is of most interest for us amongst all this is the information about the use of te, corresponding as for the rest exactly with what is said in the grammars of classical Tibetan. As there is no reference at all here to the use in dialects and especially also to the question, whether it exsists in these, although in somewhat altered form, we are referred to hypotheses rather than to well-founded facts in quoting instances from the dialectical patterns given in the volume. Only with this restriction it is possible at all to communicate some examples for the use of de, te, etc., and to deduce some conclusions from them as to the syntactical use of the rather doubtful corresponding forms.

Thus it is absolutely unintelligible whether we can combine the classical termination t_e , d_e etc, with the one given in the grammatical remarks about the dialect of Baltī (1. c. p. 37): "Conjunctive particles are formed by adding the suffix e to the present or past base. Thus, ser-re, saying; khur-re, taking, ong-s-e, having come; hhyong-s-e; having brought; be ya-s-e, doing."

I do not think that this termination, consisting only of the vocalic epenthese -s which we may consider as a short vowel-noise corresponding to the -q terminating principal clauses stands in any direct relation to the classical termination ie, de etc. I should rather think that we have to seek for an explanation on exactly the same lines as was given by me for the phenomenon just mentioned of final -o. Here, the two sentences which in the Introduction just quoted are considered as subordinate and principal, are evidently put together without any conjunction at all, the terminating e (-e,e.) being only the sign for elevating the intonation and thus indicating (viz., by musical pitch) the introduction of the next sentences which therewith is ranged as a principal one. So, all this would be considered according to the rules laid down for the use of terminating -o in my paper cited above.

I only want to give one or two examples for the use of this e in Baits, sufficient to show the absolute analogy with the use of -o: 1. c. p. 39: ... khur-sē (carrying) ... bes be yas (way made.)

```
... so sē (living) ... skang-at-pa (filled.)
... ong-sē (having come) ... zers (said).
... song-sē (having gone) ... zer-uk (shall say.)
```

If we go on now to the dialect of Purik, being the link between Balti and Ladakhi, we find a very similar use. There are the following remarks about it in the short grammar that precedes the specimens: "Adverbial and conjunctive particles are formed by adding the suffixes se and te; thus, shi se, "dying", that-te "gladly". E is sometimes used in the same way. Thus, ser-re. "saying". Such forms are occasionally also used as verbal nouns. Thus, zer-sē-nā, "from saying, having said" logh-s-ē-nā, "having returned"...".

This use may be illustrated by the following examples (i. c. f. 47.):

... syo-se ... tang-s "(having divided ... (he) gave".

... bo yas-se ... druls, "having done ... (he) went".

If we come now to the dialect of Ladakh, we find in the grammatical remarks, given after Mr. Franck's Ladakhi grammar, the following rule relative to the suffix te (p. 58): "Conjunctive participles are formed by adding the suffix te to the present or past base; thus, zer-te, "saying"; song-s-te, "having gone". There are for it the following instances (p. 62):

khur-ste (taking with him) ... langs song (he started); tshar-te (finishing) ... yong s te (having arrived) ... song (he went);

Yong-s-te (having come) ... zer-pa (he said).

Thus we may say as to the use in Ladakhi, that sentences are joined to one another in a somewhat narrower or more intimate fashion by terminating the first by -e which evidently here also denotes only the rising of the musical accent.

Going on, we find that in the rather unimportant dialect of Lahul about which only scanty information is given, the usual suffix of the verbal noun is che. But this has evidently nothing to do with the conjunctive particle de, te... or e, being related rather to the classical cin. Their is neither a specimen of the dialect to be used confidently.

Now, as to the Central dialect which is the lingua Franca of Tibet and not exclusively the local dialect of Lha-sa, we may not expect at all any remarkable difference from the classical language. Indeed, we find here the use of ste exactly as in the texts of the bKah-hgyur or bsTan-hgyur. Cf. f. 76: "Conjunctive participles are formed by adding case-suffixes to the base or by means of special suffixes such as de and te, ching and shi"

As to the remaining dialects of this group, especially those of Spiti (i. c. p. 83) and Nyamkat (p. 86), the informa-

tion given is rather scanty. There is scarcely anything said about them, that was not remarked as yet is reference to the preceding ones. The other Tibeto-Himalayan dialects treated on p. 187 ff., are too distinct from the models of classical Tibetan as to permit any comparation.

If, finally, we try to draw the conclusions from these notes about the southern Tibetan dialects, they may be resumed as follows:

Evidenty there were two kinds of using conjunctive particles, joined to the verbal form which finishes—terminates, the former clause: either a syllable derived from the old particle de, te, ste was affixed to it, or merely the vowel e (e, g., in the dialect of Balti) which is to be considered as a designation for the elevated intonation that is to announce the new sentence to which the preceding one is the introduction. This e would thus correspond to the o used at the end of principal clauses and joined to the last word by doubling its consonant. I hope I have sufficiently shown in a former paper, that this o means the lowering of the musical intonation; in the same manner terminating e would express the rising of intonation at the end of the secondary sentence.

On the other hand, the particle -te etc., used in the dialects of Ladakh, Spiti etc, as well as in the Central dialect, may be derived from an original de, viz., a kind of demonstrative particle, refering either to the whole preceding sentence, or, as is the general use in modern colloquial Tibetan (as noted by Ch. Bell), to the subject of this sentence. In the former case we may consider it as a kind of postponed subordinating conjunction in the latter as an "agentive participle", as such it has been characterised by Ch. Bell in his Grammar of colloquial Tibetan.

Of course, the question arises now whether it would not be possible to give for these two linguistical phenoumena a common explanation, either by considering the one of them as the cause of the other, or by deriving them from a common source. I think we can proceed from either as being the original construction.

Firstly, we may suppose that in the same way, as the syllable o or rather the expiring vowel-sound on a very pronouced deep pitch, was used for designating the end of the whole sentence. the syllable e, as the corresponding high vowel-noise being emploved for severing the proceding "subordinate" clause (but which did not differ as to the form from a "principal" one, except the finishing e) from the subsequent "principal" one. This state of things appears clearly in Balti like zer-re, kur-re (Ling. Survey, III, 1, p. 37), but it exists most probably also in forms which may be derived from the past participle ending in-s, e, g. ong-s-e, " having come ": khyong s-e, having brought ": beya-s-e, "doing". If we wish to reduce the froms terminating in te. ste, de as well to this pure vocalic noise at the end of "subordinate" clauses, we are to presume that this process took its origin from such verbal stems which had a dental explosive as termination. We know from the oldest sources of Tibetan script that this terminating d was much more repanded in Tibetan than appears in modern writing, and that expecially the stems ending in l, r, n in most cases had a d at the end.*

*In native Tib grammar it is called da drag. Cf. Jaeschke, Tibetan grammar 3rd edi (p. 45 § 34), p. 147; Laufer. Bird divination among the Tibetans (Toung Tao, 1914, p. 56 ff.); Schubert, Tib. National grammatik, Berlin, vol. 31, 32) I. V. 13 ff.— For the phonetic value of d as final consonent see Karlgren, Prblems in archaic Chinese, I. R. A. S. 1928, p. 789 ff.

Here quite naturally the termination appeared as de or te, which was later on considered and treated as an independent suffix in so far as it could be added to every verbal stem.

On the other side we may take our departure from the demonstrative de as well, which even in modern times has been made use of again in forming the "agentive participle" (Ch. Bell). It is true that this construction is somewhat more difficult to be understood in such cases where there is not a single word, viz. the subject of the succeeding principal brought into relation with the preceding "subordinate" sentence; but where we feel rather induced to consider the preceding as an absolute participle, corresponding to the Latin ablativus absolutus, the Greek genitivus absolutus etc. all these Indo-European constructions the Tibetan would differ in so far as there is no case ending at all, designating the syntactical depedency of the preceding sentence. In opposition to them, in Tibetan the dependence is expressed only by rising the intonation towards the end of the preceding sentence which thus keeps in a certain degree its character of a principal sentence, formally at least. But about all this we have spoken in the first part of this paper to which it may be sufficient to refer.

THE LANGUAGE OF THE KIRTILATA

By BABURAM SAKSENA.

1. Kīrtilatā of Vidyāpati, the well known poet of Mithilā, is one of his earliest works: it was written about 1360 A.D. The author calls the language of the poem, avahatthā (p. 6).

It thus represents the Apabhramsa of the 14th century. Vidyāpati terms the language desila baanā 'country-speech' also in the same breath and hence it appears that the language represents the speech of the times—particularly of the cultured classes. The vocabulary represents all the three elements—tatsame, tadbhava and Desi. Tatsama forms are very often resorted to. The first five stanzas of the introduction as well as the closing stanzas of every chapter are in Sanskrit entirely. While writing prose the author several times lapses into Sanskrit of an ornate classical style, for instance:

- p. 12 atha gadya . . . pavitra deva.
- p. 14 prabala satru jayalaksmi.
- p. 18 hṛdaya giri kaṇdarā nidrāṇa pitrvairi kēšari.
- p. 20 vismṛtasvāmiśōka (hu) kuṭibarāja niticatura (hu).
- p. 36 mānayjana (ka) lajjāvalambita mukhacandrikā kuatli katāksachatā kandarpa šara šrēņi.

This clearly shows that the language of the cultured class incorporated words from the ever-present literary language vis. Sanskrit just as literary Hindi does to-day or literary Urdu does from Persian. The Pandits of Mithilā have always been an orthodox set and have kept in close touch of Sanskrit literature and thus at every stage they could freely borrow from the parent

^{1.} The references are to the pages of Kirtilatā, edited by the writer of this monograph and published by the Indian Press, Ltd., Allahabad. The text has been collated from two manuscripts and from Har Prasad Shastri's Bengali edition, and is accompanied by a Hindi translation and an introduction. The edition was taken in hand at the suggestion of Sir George Grierson.

language. Even to-day, the Pandits' maithili differs from that of the illiterate country-man in this particularity to a considerable extent.

The tadbhava words have a great variety of forms, the same words may represent several stages of its development, e.g. brahmana: bambana p. 32, babhana, p. 44. This is explicable by the fact that the same word may have been taken as a loan from Sanskrit at various stages.

Dēši words are very few. Chailla appears earlier in Prakrit works (e. g., in Karpūramañjarī); I have noticed in this text dhāgada, p. 90 and ruṇḍa, p. 90.

2. Besides the above the text contains a large number of loan-words from Persian and Arabic. The poem gives a detailed description of Jaunāpur (modern Jaunpur), the seat of a Muslim principality. The following is the list:

Surtana, p. 10, (Surutana p. 44), patisaha, p. 14, 22, turukka, (turukká, p. 38, turuka, p. 40, 44, tuluka, p. 66, 70, turukini, p. 42) sāha, p. 36, Kammāna, p. 38, (kamāna, p. 90), maijjalla, p. 40, mīra, p. 40, vallia, p. 40, saillāra, p. 40, sarāba, p. 40, kbāma, p. 40, mukadama, p. 42, matarupha, p. 42, carakha, p. 42, saada, p 42, ivilaha, p. 42, daravesa, p. 42, makhaduma, p. 42, 80, hukuma, p. 42, baga, p. 42, misimila, p. 42, 90, nimāja, p. 44, masida, p. 40, 44, gālima, p. 46, (darabāra, p. 46 (darabāla, p. 50), mahala, p. 46, dārigaha, p. 50, nimājagaha, p. 50, khoāragaha, p. 50, khōramagaha, p. 50, davāla, p. 50, dākhola, p. 52, ujjira, p. 56, khodālamba, p. 58, pāpōsa, p. 58, pharamāna, p. 58, sēra, p. 58, demāna, p. 62, gaddavara, p. 62, !kurubaka, p. 62, adapa, p. 62, takata, p. 98, (takatana, p. 64). tabala, p. 66, malika, p. 110 (manika, p. 80), rāha, p. 80, bakhata, p. 80, danēja, p. 80, thēgha, p. 82, nisāna, p. 84, tajāna, p. 84, bāga, p. 84, cabuka, p. 88, tarakasa, p. 88, phauda, p. 88, magola, p. 90, khundakāra, p. 90, bagala, p. 90, banda, p. 90, sikāra, p. 98. mahamada, p. 100, sarama, p. 102, gandā, p. 38, bandā, p. 38, kūja, p. 38, 42, tabella, p. 38, dokkanadara, p. 38, khisa, p. 38, moja, p. 40,

khôfi, p. 40; 42; kaiimā; p. 42; kasīdā, p. 40; kitēbā; p. 40; kahābā; p. 40, paedā, p. 40, 80, nevālā, p. 42, dvāā, p. 42, bādi, p. 38; raisti) p. 68, bajāri, p. 38, karībi, p. 40, bājū, p. 38, peājū, p. 38 (piāju, p. 42) sarāfē, p. 38, kalāmē, p. 40, khodāe, p. 40. gulāmō, p. 38, (gulāmā, p. 96) salāmo, p. 38, tokhāra-hi, p. 40, rōjā, p. 42, mulukkā, p. 46, umāra, p. 46, (tīmārā), kādī, p. 80, meņāņe, p. 50, hauddē, p. 96, hajāsī, p. 38, khāsa, p. 50, kharāba, p. 40, sadara, p. 50, teji tājī, p. 84, 88, kharīde, p. 38, abē bē, p. 38.

These words take up the terminations like Sanskritte words; the nearest sounds have been substituted for such foreign sounds as do not exist in the language. There are certain modifications: which are explicable only by the hypothesis of hesitation and uncertainty of the correct pronunciation.

- 3. The sounds do not need a separate treatment as the history of I. A. sounds is regular in this text. The following points, however, may be noted:—
- (a) Vowels—these are generally lengthened at the end of a foot for the sake of metre and rhyme and sometimes even in the middle (e. g., phūra, p. 76). But the lengthening is inexplicable on this ground in several cases (dīgantara, p. 70, cf. dīggantara, p. 94, antarīkhha, p. 106, cf. antarīkhkha, p. 110, thīra, p. 92, cf. thīra p. 110). In one instance even the quality of the vowel has been changed for rhyme (I becomes ō—nōra for nīra in order to rhyme with bōhra, p. 22). In kumara, p. 24, and rājā, p. 24, the shortening of the vowels (kumāra and rājā) is not explicable. ai ānd au in a few cases appear written as diphthonga but are really simple vowels āī āū.
- (b) Initial y was pronounced as j as is clear from its appearance in two places where j was expected (yaṇāvañō, p. 4, yujjhayi, p. 90, cf. jujjha, p. 84) -y (in place of an elided -k-).

^{1.} For a detailed treatment of foreign sounds see the writer's paper: 'Persian loan-words in the Rāmāyan of Tulsīdās'—Allahabād University Studies, Vol. I, pp. 63-7ā.

is retained in some cases as is clear from its representation by e (sakala>saela, p. 50, nagara>nayara, p. 16, cf. naara, p. 26) as medial-ya and -e- had no distinction in pronunciation (payadā, p.40). r and I are confounded in several words (ghōlā, p. 24, 30, ghōrā p. 44, cf. ghōdá, p. 68, sambala, p. 24, sambara, p. 70); I, however, has an upper hand: palai, pali, p. 66(cf. Hin. par- A wadhi par-), jōli (cf. Aw. jōrl), p. 88, pakali, p. 100 (cf. Awadhī pakari), davali p. 46 (Aw. dauri). The text has v abundantly, but this simply is used for b in most instances (e.g. vamhana, p. 32).

(c) nasals—no distinction appears to have been made between n and n, the latter being the pronounced nasal (suana, p. 4. suana, p. 32) Old -nn- was pronounced as -nd- as is clear from akandana, p. 6, pundu, p. 8, sendu, p. 64. ñ represents ý initially and mere nasalisation medially (ñañona, p. 26, kahaño, p. 8).

n represents 1 in manika, p. 80 and nahia, p. 48 and 1 represents n in lastila, p. 38 and ilame, p. 48.—m— is represented by -v— >-b—generally, but the reverse process is found in apamana, p. 34 (<apamana through apavana). In sambara, p. 28, (<sambhara: sabhara), m possibly represents merely nasalisation. In canda, p. 34, ranka, p. 50, candana, p. 68 and anga, p. 68, (cf. aga) the nasal was very weak and was coming towards nasalisation merely. The text is very fond of nasalisation and in most cases there is no plausible reason for it, e. g, amiña, p. 56 for amia, paña, p. 6 for paua; piña, p. 16, ñpāe, p. 10, ñmārā, p. 60, kāja, p. 68, turukkā, p. 38, jāniña, p. 52, bissamiña, p. 52.

- (d) sibilants s appears in many instances but its pronunciation was kh as is clear from the following instances khāna, p. 40, sāṇa, p. 46, susa, p. 56, sanē, p. 68). It was possibly pronounced s (or s ?) when a velar consonant was in proximity e.g. ahisēka, p. 112 (cf. modern pronunciation of saṣṭhi as khaṣṭhi. The regular sibilant was s.
- (e) aspiration—The absence of aspiration in nakata, p. 42 (<naksatra, modern nakhata) and its presence in bipatha, p. 70 (<vipatti) and pacchūsa, p. 56 (<pre>cpratyūsa) is not easy to account

- for. At some places the orthography doubles the same aspirated consonant (eg, uththi, p. 50), but it represents a combination of the unaspirated and the aspirated form. The consonant -h-comes up in several instances in grammatical forms and is inexplicable, e.g. in the past tense of the verbal forms.
- (f) mutes—The absence of voice in thaka, p. 16 (modern thaga Skt. sthag-) is not easy to understand. The pronunciation-dhappears to have been unstable (cadhāvai, p. 44, cadi, p. 100, cahri p. 98.
- (g) The following instances of sandhi have been noted: kikkariaŭ, p. 70, kikkaria, p. 80, āevaja, p. 30, jajjamia, p. 10.

In the following pages a detailed grammar of the language is given.

NOUNS.

§4. Bases end in -a, -ā,-i, -I-, -u, and $\cdot \bar{\mathbf{u}}$.

By far the largest number is that of -a bases which are about 1700 (about 1400 without terminations and about 300 with terminations). The number of ā bases is 225, of -i 155, of -i 80, of, -u 45 and of -ū 7³.

- (a) Bases in -a represent either old bases in -a (e.g. hiaa, p. 6, Skt. hṛdaya 'heart', suaṇa p. 4: sujana 'a good man', chailla, p. 4: Pkt. chailla 'clever'), or old bases in -ā (e.g. lāja p. 92: Skt. lajjā 'shame', seva p. 8: Skt. sevā 'service') or are loan-words from Persian-Arabic (e.g. kammāṇa p. 38: Pers. kamān 'bow', nimāja p. 44: Ar. namāz 'prayer'). It is certain that the final -a (after consonants) was not pronounced, it appears here because the script does not distinguish between a consonant plus -a and a mere consonant in the final position.
- 3. For the purposes of statistics in this monograph, if a noun occurs more than once it has been taken to be as many nouns, e.g. if kaṭaka 'army' occurs as kaṭaka twice, as kaṭakāñi twice and as kaṭake once, it will count as five nouns.

- Skt. věšyā 'prostitute', rajā p. 24: Skt. rājā 'king', or the elongated forms of ancient a bases (e.g. vaanā p. 6: Skt. vacana -ka 'speech' vallahā p. 26: Skt. vallabha -ka 'dear one', bōlā p. 94: Pkt. bōla 'word'), or are loanwords from Persian ending in -ā, -ah and a consonant, (e.g. dvāā p. 42: dw'ā 'blessing': ũmārā p. 60, umrā 'noblemen'; kujā p. 38: kūzah 'cup', khojā p. 42: khwa:jah 'an honourableman'; kiteba p. 40: kitab- 'book'. turukā p. 44: turk 'Turk'). Of about 225 bases ending in ā, 80 are old -ā bases, and 16 loan words from Persian. The rest are the elongated forms of -a bases. Some of these have short forms also, e.g. ghōlā, p. 52 and ghōla, p. 24.
- (c) Bases in -i either represent old -i, ·I, -in bases (e.g. satti p. 6: śakti 'strength', vijjāvai p. 4: vidyāpati, meini p. 12: mēdinī 'earth', hāthi p. 30: hastin 'elephant') or are Persian bases in ·I or a consonant (e.g. bādi p. 33: bādī 'maid', raiati p. 63: ra'yat 'subjects'). Besides jai p. 48 represents Skt. jaya 'victory', gāi p. 44 represents Skt. gō 'cow'. The actual Sanskrit from gō occurs on p. 34 Except half a dozen nouns mentioned above, all the bases in -i are representatives of Sanskrit -i, and i- and -in nouns.
- (d) Bases in -ī represent old -ī (e.g. lacchī, p. 26, meinī, p. 106: mēdini 'Earth'), -i (pātī, p. 24: pankti through Skt. panti 'line', bhumī, p. 96: bhumi through Pkt. bhūmī 'Earth'), -ikā (kāhānī, p. 8: *kathānikā 'story', piārī, p 20: priyakārikā 'beloved') and -ia bases (mantī, p. 20: mantrin 'minister'). As a result we have both short and long forms of a few nouns, manti: manti, mēini: mēinī. Besides these, we have a few loan-words from Persian viz. karībī p 40 'paucity': garībī, bādī p. 63 'maid', kādī p. 80: qāzī 'judge' turukinī p. 42 is a feminine form of the loan-word.
- (e) Bases in -u represent old -u (e.g. sattu, p. 8: satru 'enemy', riū, p. 12: ripu 'enemy', pahu, p. 56: prabhu 'master'). In bhāhu, p. 112 we find a representation of -ū base (bhrātrvadhu 'younger brother's wife') and in goru, p. 90, -u represents -ūpa> -ūa> -ū.

- (f) Bases in \bar{u} are only elongated -u bases pass, p. 6 'cattle', bindu p. 42 <sindhu 'Hindu' (aspiration lost by Persianisation) sattu p. 104. There is one Persian loan-word baju, p. 38: bazu 'side'.
- (g) One noun bhuavai, p. 8 is found in ai but it represents only all. There is one noun matr, p. 18 which is pure Sanskrit. A few nouns are found in but the sound in them represents ya of Sanskrit (e.g. vae, p. 92: vyaya 'expense') or of the Prakrits 'e.g. rae, p. 10: raya 'king' loe, p. 43: loka > loya 'people') or in one case of Persian (khodāe, p. 40: khodāyā 'God').

CASE_TERMINATIONS.

- 5. Out of about 2200 nouns used in the text, only a little over than 300 appear with terminations. These are:—
- -m, -ena, ehi (-ehi), -ana, -ani, -ha, hi (-hi), -nhi (-nha) -u, -o, -aṇaño, -e (6) and -hu.
- (a) Only one instance of -m (rolam, p. 106 uproar') is found and it is a Prakritism. (b) So also are 4 instances of -ēna (purisattanēna, 'by valour' jamma-mattema 'by mere birth' and jaladanena 'by gift of water' all in one stanza p. 6 and gamanena 'by going' p. 94) and (c) 4 of -chi (khaggehi 'with swords', p. 104, parakkamehi 'with feats of valour' p. 84, cămarehi 'with chowries', p. 84, pakkharehi 'with cover ings?', p. 84) (d) There is only one instance of ana (namana 'names', p. 104) and it serves as accusative plural. Does it represent the ancient nominative plural of masculine an bases? (e) katakānī 'armies', p. 76, p. 94 is found twice and represents -ani ending. It is interesting to note that -n- is represented here as -ñ- which is merely nasalisation, while it survives intact in turukānane (see infra (h)). (f) There are 11 instances of the termination all after -a bases (e. g., jujjhaha 'of the battle', p. 110, dhuttaha 'of the wicked person', p. 34, raaha 'of the king', p 22) Once ha has been lengthened to ha (devaha 'of the gods', p. 4). This -ha represents Skt. -sya> -sa, In all the eleven instances it has a genitive sense.

(q) There are 44 instances of -hi (-hi). Of these 29 have a locative sense (e. g., ki samsarahi sara 'what is the essence in the world', p. 6, tatthi doarahi paia 'there on the door were found', p. 48), 6 accusative (e. g., sattuhi mitta kae 'having made an enemy a friend', p. 18), 7 instrumental (e. g., pae bharahī 'by the weight of the feet', p. 60) and 2 genitive (rāyagharahi kā pubba khēta 'the former field of Rajaghara', p. 102, vaisyāhi karō sukha 'the happiness of those courtezins', p. 34). Except in the two instances last mentioned it is every-where found without postpositions. It is used in the singular except in one instance cited above. I should connect this with the -smin termination of Sanskrit.1 ponderating locative use of this case establishes that. The beginnings of the use of this case as a general oblique are found here. In a later Awadhi text (Tulsidas-Ramayan) this case is fourd as a very general oblique case.

Of the 44 instances of this case, 2 are of -u nouns 3 of -a nouns and the rest of -a nouns.

(h) There are 13 instances of -nhi (12 after -a nouns and 1 after -ā noun) and 1 of -nha. Of these 11 have a genitive sense—9 with postpositions and 2 without them (e. g., mahājanhi karō bōlantā 'at the utterance of great men' p. 18, arirāanha lacchia chōli le' seizes the glory of the enemy-kings', p. 86). 1 accusative (gō bōli gamāranhi chāḍa 'leave the country-people when they cry for protection', p. 36) and 2 agentive (tabbē mantinha kiau baththāva 'then a suggestion was made by the counsellors', p. 56, maharāanbi mallikē cappiliū "the malik was overcome by the mahārājā', p. 112). This case is based on the ancient genitive; the addition of -hi is possibly on the analogy of the singular in order to give a distinctive body to the case.²

^{1.} I prefer the derivation of this case from -smin to -dhi (vide Chatterji: Origin and Development of Bengali, 499).

^{2.} For detailed arguments for this sec. I. A. LII, 1923, p. 76 where I discussed the derivation of the same case in Tulsidia.

(i) There are 12 instances of -u termination. 11 after -a nouns and 1 after -a noun (kalau 'in the art or of the art', p. 4). Of the 11 instances after -a bases, all except three have a nominative or accusative sense (e. y., tabahu piāju piāju pai 'even then only calls onion, onion 'p. 42, jasu patthave pundu 'at the mention of which merit (accrues)', p. 8). In the three instances where the -u ending gives a genitive sense (muhu bhitara 'in the (middle of) mouth', p. 42, sendu sankha 'the number of the army', p. 64, mahāmāsu khando 'the piece of human flesh ', p. 106) it has been used like -a base in compounding. It should be noted that in two cases sendu, and rau the -u ending has come up after an -a base reduced to -a, senā > sennā > senna > senda; sendu, rājā > rāā > rāa; rāu. The -a forms of these words (senna and raa) are attested by this verv text. This -u ending is the ancient -ō -ah of the Nominative singular,

Note.—In all the eleven instances -u comes as a substitute for final -a (māsu and not māsau).

(j) There are 33 instances of -ō ending, 9 added after final -a and 24 substituted for it. This is the old Nominative singular ending coming after the ordinary or the elongated (-ka) base. The -o is sometimes short and sometimes long. The sense is everywhere nominative or accusative (e. g., jahā jāia jehe gāño, bhogāi rajā ka baḍḍi nāño 'whereever to whichever village they went, there was great fame of King Bhōgēśvara' p. 24) except in the following instances:

mahāuō ka 'ākusa ': the goad of the elephant-keeper', p. 82, diggantara rāā sevō āā ' the kings from all the other quarters came for service, p. 94,

pão pahāre puhuvi kappa ' the Earth trembled at the stroke of the foot', p. 102.

calia takatāna suratāna ibarāhimao 'the coaches of Sultan Ibrāhim moved', p. 64.

In these instances the -o ending has lost its force of the

Nom.—accusative and has been used as an ordinary base. We also find five instances where a noun with this ending has been used in the plural (kumārō 'princes,' p. 38, kumāraō, p. 80, dvaraō 'doors,' p. 42, gulāmō 'slaves,' p. 38, salāmō 'greetings,' p. 38).

- (k) There is one instance (Turukāṇaño of the Turks', p. 38) of -āṇaṇo ending (based on ancient -āṇām).
- (1) Of 191 instances of .e (-5) ending, 150 are in -e and 41 in -5. Of these I is after-i base puhaviô' of the Earth', p. 46) and in this case is the representative of the Prakrit oblique ending . § Three are after -a bases (tulanañ: 'by after feminine bases. comparison,' p. 14), majjane 'by marrow,' p. 106, vidhatane 'by the' 'Creator,' p. 14) of which the first two are oblique) - ē (Pkt. fm.) and one is instrumental on the model of a bases. The rest are with -a bases. The largest number indicates an instrumental sense (65 -e and 27 6), e.g., rune 'by beauty,' p. 48, pas bhare 'by the weight of the foot, 'p. 46, bhare, p. 86 next comes locative (41 -e and 45', e.g. magge 'on the way, p 104 meñane' in the middle,' p. 50, mathe' on the head p. 68), 30 are with a nominative sense (27 -e,4-5), 13 accusative (10 -e, 35) and 6 (e) denote a genitive sense, (e.g. pattape cinhe 'signs of glory,' p. 94). Under Nominative 7 e.g. rān putte mandin' the princes adorned', p. 48, kācalē kacalo nayano 'bewitching eyes', p. 86, phaude 'armies' p. 96) and under accusative 2 (mahala majedē janantā 'knowing the joys of the palace', p. 46, nahia ilame 'having obtained rewards', p. 48) denote a plural number. Under Nominative and accusative 24 -e endings are merely -ya, representing a medical consonant which has been lost or representing Sanskrit or Prakrit -ya (see supra §3).

The instrumental ending is surely ancient -ēna (-ēṇa, and the locative ancient -ē. Under nominative and accusative as well as genitive in the singular there is possibly māgadhī Nominative singular -e. In the plural, there appear to be the traces of the pronominal pominative -ē extended to the nominative as well.

- Note.—In three words ram 'in battling', p. 64, kā in the world', p. 74, mamattayai 'by mother's love', p. 20) the -ā termination appears as -i which regularly alternates with -ā.
- (m) On page 20, we find three instances of plural vocative in -hu (logahu, -sokahu, -caturahu). This can be explained by the word ho uttered with the name called.

Note.—The following particles for calling people have been used in this text:—

arë are, p. 20, ahaha, p. 70, ahō ahō, p. 50, abë bë, p. 40.

ADJECTIVES.

6. In this text we find about four hundred adjectives. A few of these have been used as nouns, the latter being understood, e.g. bhuleo baddeo cētanā 'even the great (men) lost consciousness; p. 26. Sub-divided the adjectives fall under four heads:

of quality 181 of quantity 28

of number 128 and

Pronominal 61

(The pronominal adjectives will be treated under Pronouns). By far most of the adjectives are based on Sanskrit adjectives found as tatsama (e.g. prasanna 'glad' p, 56, matta 'intoxicated' p. 42), ardhatatsama (e.g. kirisa < kṛṣa 'lean' p. 70, nirabala < nirbala 'weak' p. 70) or tadbhava (e.g. tāta < tapta 'heated', p. 60, suhavvā < subhavya 'very impressive', p. 48). Sometimes several forms of the same adjective may be found e.g. sakala -o, p. 50, saala, p. 66, sagara, p. 66.

Only the following adjectives are of Persian origin;—surutani 'belonging to Sultan', p. 64, ganda 'dirty', p. 38, kharaba 'bad', p. 40, sadara 'principal', p. 56, hajārj 'thousand', p. 38, tēji tāji 'smart and speedy', p. 84.

7. Adjectives do not generally change for gender; only the following instances of the feminine gender have been noticed:

rūsali bibhūti 'angry prosperity', p. 14, tetuli bēlā 'at that time', p. 18, baddi māño 'great Name' (the feminine appears misplaced because nāño is masculine, but as it means 'glory', possibly the adjective has the gender of kitti 'glory' fm. by contamination), dosari amaravati 'a second Amarāvati', p. 28, auki hāṭa kareo 'of the other market', p. 32, barī barī saphari 'big fish', p. 36, hini mājha khini 'the middle portion, lean and devoid (of defects), p. '6, nāri biakhkhani 'clever women', p. 38, ādī dīṭhi 'with a slanting glance', p. 40, giti garuvi 'an effective song', p. 42, barī sāti 'great harassing', p. 68, puhuvī bhae jā chōtī 'the Earth was becoming smaller', p. 94.

Adjectives do not change for case either. Only the following instances of change for the oblique cases are found: bahule bhấti 'in many ways', p. 30, ēkē kṣaṇē 'in one moment', p 30 taruṇe turuka vācā 'word of young Turk', p. 90, garuñē dāpē 'with great pride', p. 88, sagarē rāha 'on the whole path', p. 80, dosare māthe 'on another head', p. 68. The following instances only show change for plural number:

sabe (rāe) 'all (kings)', p. 60, bākulē (baanē 'attractive (faces)', p 68, kācale (naanē) 'charming (eyes)', p. 68, (cinhē) bhinnē 'different (insignia)', p. 94, baddeo 'big men', p. 20, chōteo turukā 'even low Turks', p. 44.

- 8. The following numerals appear in the text:
- (a) Cardinals
- 1. ēka, p. 92, yaka, p. 42, ekao, p. 70
- bē, p. 88, bēvi, p. 80. duhu, p. 98, duaö, p. 24
 (be appears 14 times and du 5 times).
- 3. tinni, p. 8, tinu-hu, p. 14, tinū, p. 20, 34, tinu, p. 36, tina p. 74
 - 4. cāri, p. 84, cāruhu (pāñe), p. 86.
 - 5. pañca, p. 16
 - 7. sāta, p. 52
 - 8. attha, p. 96, asta, p. 28
 - 10. dasao, p. 10, dasa, p. 68

20. bisa, p. 90

28. atthatsao, p. 52.

100. sae, p. 90, sata, p. 28.

1,000 sahasa, p. 26, hajāri, p. 38

1,00,000 lakhkha p. 38, lakha, p. 66

1,00,00,000 koti

'numerous' -bahula, p. 70, anëa, p. 84, anëkō, p. 38 bahü, p. 106, bahutā, p. 38, bahuta, p. 92, pracura, p. 28

'all'-sabē, p. 60, saba, p. 50, sabba, p. 16

'innumerable' -anavarata, p. 82, ananta, p. 40, akhila, p. 86.

PRONOUNS.

9. First Person.

In the direct case there is only one form hano 'I' which is found in five places, (p. 6, 8, 18, 80, 100). This is based on aham.

In the oblique mo (p. 64) is found once and so also moñe (p. 4, both have a dative sense. The genitive has several forms mama (p. 22, 112), mahu<masso (p. 62, 110, 112) maha < massa (p. 110), majhu (p. 4, 58), majjhu (p. 22), mujhu (p. 70), mujjhu (p. 4, 72), all based on mahyam and mora (p. 20), mera-hu (p. 20) which appear to have an enclitic (kara?) added to the oblique form.

ahma appears twice (p. 72, 74) and ammaha once (p. 70) as genitive only. They go back to the Prakrit amhē.

10. Second Person.

In the direct tone appears once (p. 112), toha once (p. 64) and tohe four times (p. 58, 64, 64, 64) tumbe appears as Nominative four times (p. 60, 60, 64, 64) and as accusative once (p. 60).

In the oblique tohi (p. 112) appears accusative and tujiku once as dative (p. 112) and twice on (p. 56, 58) as genitive tumbé occurs as a genitive twice p. 60 and tumba as genitive twice (p. 58, 60). Oblique to (p. 58) is used with the postposition ke as a dative.

All these forms are derivable from the Prakrit forms.

11. Third Person.

The forms of the third person, remote demonstrative and correlative fall together.

In the direct singular the text has the following:

- (a) so which appears six times as demonstrative (p. 6, 6, 8, 26, 62, 112) and twice (p. 4, 20) as correlative,
 - (b) sa (p. 12) as third person pronoun
- (c) se as correlative once (p. 112) and as demonstrative once (p. 112).
- (d) \bar{o} seven times (p 4, 59, 50, 64, 64, 64, 68) and \bar{o} -hu thrice (p. 50, 64, 64) appear as demonstrative.

In the direct plural we have two forms to (p. 96) as a correlative and to (p. 94) as third person subject.

The oblique has several forms tā is found twice (p. 22, 100) as accusative and once as genitive (p. 94), tāhi appears thrice (28, 50, 50) and in every case stands as a demonstrative adjective to plural nouns, once it appears with karō (p. 86) as genitive singular. Similarly tanhi (p. 36) without postposition and tānhi (p. 36, 12) with karī, karō denote genitive plural and tenhe (p. 76) and tenhi (p. 62) stand as demonstrative adjectives with plural nouns. tanu (p. 26, 33, 44, 4, 8, 10, 50, 74, 83, 100), tānu (p. 10, 12, 74, 100, 76) and tinu (p. 74) stand as genitive without postposition, only once does tanu appear with kērā (p. 32).

without postposition (p. 96) and with ki (p. 32) and ka (p. 42) denotes genitive.

tauna appears once (p. 58) as an adjective and is derived from ta+upa (tat punah) tam: Pkt. tam as an adjective is found twice (p. 88, 90) in the sense of 'that'.

12. Relative Pronoun.

In the direct jō appears as Nominative singular thrice (p. 4, 20, 80) and jē thrice as singular (p. 10, 16, 72) and once as plural (p. 96).

In the oblique singular we have jena thrice on p. 8 (Pkt. jena) and je < jena thrice (p. 8, 10, 80) je appears as an adjective twice (p. 90, p. 112). As agentive jenhë appears on (p. 10, 12, 14 and six times on p. 76 and jenne once (p. 12). In all these cases it is plural. There is one instance of jei (p. 10) and there are two instances of janhi, once (p. 34) without post-position and once (p. 32) with kē. In the genitive singular we have jasu (p. 6, 8, 74, 76, 88, 114), jassa (p. 6) jāsu (p. 6, 8, 48, 84) and jisu (p. 74). jam appearing once (p. 10) is used as a locative, jehe as an adjective of gāñō (p. 24) and jeñona (<jem una) of darabāra meñāņē (p. 50).

13. Proximate Demonstrative.—

In the direct we have i (p. 4) and thu (p. 8, 18, 50, 96) and in the oblique thi (p. 18) and thi (p. 50).

is a modern demonstrative; thu < to and in thi, thi-hi possibly represents the oblique ending.

14. Interrogative.-

In the direct we find **kō** on p. 8, 62, 64, 82, 96, 110 and **kē** on p. 52, 88 as animate and **kī** (p. 6, 98, 98, 60, 70, 76, 80) **kā** (p. 4, 28, 34, 40, 42) and **kāha** (p. 64) as inanimate. We also have **kavana** (p. 8), **kañoṇa** (p. 51), **kamana** (p. 68, 96, 112) and **kamaṇa** (p. 22).

There are two instances of kena (instr. sg. p. 94, 98); of

these kō<kaḥ. ke is the Māg. form of kō; ki represents klm; kā and kāha?; kavana etc., go back to ka uṇa.

- 15. Indefinite.
- (a) 'Some one'-kōi appears once (p. 16) and kāhū 12 times (9 times on p. 24 and once each on p. 34, 36 and 42). Once we have kāhu-o (p 24). The inanimate kichu (aomewhat) is found on p. 20, 30, 32, 42 and compounded with āna on p. 42.
 - (b) The pronouns meanig 'other' are:-

āna (āṇa) < anya on p 18, 30, 58, 62, 94, iara (p. 60) iarō (p. 4) < itara, avaru (p. 34) < apara and para (p. 48).

The last one has its adjectives parāri (p. 42) parāri (p. 104).

16. Reflexive.

We have several forms based on ātman viz., āpe (p 48, 80), āpa ·ka- (p. 90), appā (p. 104), appa (p. 4) appu (p. 32, 66) and spana (p. 22), apanē (p. 32), apenehu (p. 60), apaneño (p. 42) and appana (p. 100). All are used in a genitive sense except āpē which means 'by one's self'. nia (p. 72, 48) and niña (p. 8, 18, 60, 91, 100) < nija as well as nija (p. 18, 102) mean 'one's own'.

17. Pronominal Adjectives.

The following pronominal ajectives, besides those already mentioned under various pronouns, have been found in the text:—

- (a) taisanā (prastāva) 'of that sort', p. 62, taisao (kabba) 'of that sort', p. 4; aisa, p. 22, aisō (kaṭaknhi) p. 92, aiseo (paratāpe), p. 44, aisano (āsa), p. 36, aisaneño (ũpatāpa), p. 62, aisenñao, p. 34, 'such'; jaisao (kabba) 'as', p. 4.
- (b) tetuli (belā) 'that much', p. 18, ettā (dukhkha) 'so much', p. 72, kata 'how much' p. 88.
- (c) ettë (lakkhana) 'so many', p. 6; kata (dhagara) 'how many'? p. 90, katehu (dine) 'many a', p. 24.

Of these (a) are based on -drsa (tadrsa etc.), (b) and (c) on -vat. The suffix -na is an addition in taisana, taisao; aisa being the ordinary forms.

POSTPOSITIONS.

- 18. Only about a hundred postpositions are found in this text. Of these after nouns and pronouns we have the genitive postpositions used 73 times, instrumental and ablative 11 times, locative 6 times and dative once. The rest are after adverbs, e.g. tē and kahu.
 - (a) Genitive -dative.
- ka—17 times (e g. p. 14 šakti ka parīkṣā 'test of strength). Only once has it a dative sense (ahimāna ka 'to pride' p. 58).
- $k\bar{a}-3$ times, once genitive (nägaranhi kā mana gāḍa 'got fixed in the hearts of citizens', p. 33) and twice as dative (adhama uttama kā pāraka 'the low man gives deliverance to one high birth' p 16, āna kā lāga 'stuck to another', p. 30.)
- $k\bar{a}$ -3(100, 102, 92) used as genitive in all the cases (e.g. gandaka $k\bar{a}$ pānī 'the water of Gandaka', p. 100).
- kē —7 times always genitive and with a noun in an oblique case (e.g. surutāna ke pharamānā 'on the Sultan's Firmān', p. 80).
- kei —3 times, once with a feminine noun (asa asavara kai 'the hope of a horseman', p. 86) and twice with a masculine noun (sira navai sabba kai 'the head of every one bends down', p. 50, bhae sabba kai 'everyone's fear', p. 50).
- $k\bar{o}-7$ times, all genitive (e.g. rasa ko mamma 'the secret of sentiment', p. .) •
- $kar\bar{o}$ -14 times, all genitive with a singular noun (e.g. $t\bar{a}nhi$ $kar\bar{o}$ putra 'their son', p. 12).
- kare 2 times, both genitive and with nouns in an oblique case. (kumbhōdbhava karē niyamātikramē peli 'having moved in the transgression of the injunction of (the sage) born of a jar, p. 82, padma kare ākārē 'in the form of a lotus', p. 86).
- kareo —4 times (14, 30, 32, 50, e.g. dusta kareo dappa cureo 'trampled on the pride of the wicked', p. 14).

karf —7 times, all genitive with a feminine noun (e.g. sattu karl dithi 'the glance of the enemy' p. 112).

kērā —5 times, all genitive (10, 26, 32, 72, 102, e.g. tā kula kēra baddipana 'the greatness of that family', p. 10).

kērī—once and with a feminine noun (tam disa kērī rāya-ghara-tarūnī haṭṭa bikāthi 'the youthful Royal ladies of that family are sold in the market', p. 90). Of the above ka, kā, kā, kē and kai go back to some forms of kṛta, and karō, kare, karēo and karī to the elongated Prakrit forms of the same participle (kariō etc.) while kērā and kerī possibly to *kāryaka.

(b) Locative.

mājha 2(yuvarājanhi mājha pavitra 'clean (virtuous) amongst the Princes, p. 12, mājha sangāma 'in the battle', p. 104)

maju 1 (sānā maju 'in the army', p. 80) mādi 1 (bīthi mādi 'in the street', p. 32). pā 1 (bhumi pā 'on the Earth', p. 86). pari 1 (kamana pari 'on whom', p. 95).

Of these mājha and maju are derived from madhya and pā < pakša or pāršva while pari < upari.

(c) Instrumental-ablative

sē —2(dāma sē 'by the string', p. 84, tāsa sē 'from fear', p. 84). saño —6 (6, 22, 32, 82, 104, e.g. jīva saño 'with life', p. 22).

taha -1 (yātrāhu taha 'even by going', p 30).

hō -1 (rola hō by the noise', p. 30).

hunte -1 (duru hunte 'from far off', p. 46).

Of these saño < sama or samāna the latter being used as such in pabhan samāna 'with or like a mountain', p. 82); and sē < sahitena, while taha possibly comes from tataḥ, huntē from hontae locative of the imperfect partiaple of $\sqrt{bh\bar{u}}$ - and hō also from $\sqrt{bh\bar{u}}$ -.

(d) Dative—besides the few cases cited under genitive we have lagi once in the sense of 'for' (tesara lagi 'for the third' p. 34). It is the absolutive form of lag-

VERBS.

19. The text abounds in the verbs of the past tense and of habitual or historic present, as it is a descriptive poem. The other verbs are found generally in direct speech.

20. The Present Tense.

This is generally expressed by verbs with personal terminations based more or less on the ancient Present tense. The terminations are:

Singular.		Plural.
1st.	-año	
2nd.	(a) -asi	
	(b) -ahi	
3rd.	(a) -ai (-ae)	(a) -ah 1
	(b) -ahi	(b) -anti
	(c) -athi	
	(d) -a	

Note.—The initial a- of these terminations is elided if they are found after roots ending in ā (jā: jāthi p. 30), è (de: dei p. 40), and ō (hō: hōi. p. 16).

1st sg.-e.g. jampaño 'I say', p. 6, lavaño 'I bring', p 100, haño kahaño 'I say', p. 80. There is one instance (dekhao 'I see', p. 18) where -ñ- (which represented merely nasalisation) is absent. The termination is based on -amah of the plural, transferred to the singular.

2nd sg.—There are only three instances of (a)—kahasi 'sayest', p. 6, jāsi, 'goest', p. 112, bhaggasi 'runs always', p. 112, all in a conjuctive sense, and three of (b)—jāhi, p. 112, jāhi jāhi, p. 112, and jāhi jāhi, p. 112, all in the sense of imperative. Both are possibly the -si termination of the Prakrits. (b) showing the development of -s- as -h-.

3rd. sg.—by far the most common form is -ai, (e.g. besāhai 'buys', p. 32, pajjaṭai 'rɔams', p. 28) there are about half a dozen instances of -ae (e.g. milae 'meets' p. 38), nine of (b) (e.g. dhāwahi

'runs', p. 94) and sixteen of (c) (e.g. avathi 'comes', p. 30; once hotha 'becomes', p. 102). Sometimes the same root is available under more than one form (rahai, p. 42, rahai p. 48, avahl, p. 46, avai, p. 60). Of these form (a) goes back to Sanskrit-ati>-Prakrit-ai, -ae being merely a variant of ai in pronunciation. In athi there appears to be a resuscitation of the ancient form with an emphatic aspiration, and -ahi would be a derivation of -athi. Or possibly the -h- in -ahi represents emphatic ai. It should be noted that athi does not express any honorific sense as against modern Maithili (Chatterji, p. 936).

Besides the above we have two instances of -ē (karē 'does', p. 34, kharīdē 'buys', p. 38) which is a further development of ai. We have ten instances of present tense in -a (e.g. kara 'does' p. 34, bāja 'strikes', p. 52, basa 'resides' p. 26, hōa 'becomes' p. 38). There are a few instances of the Past tense in -a (see infra 21 (a) A similar form in -a is found in Tulsidās also¹. What is the origin of this? Does it represent, the loss of final -i of ai? But this is not attested by modern. Maithīlī or Awadhī? Is the perfect participle here found used as the present?

Note.—In a few instances the root in \bar{a} , \bar{e} and \bar{o} is by itself found without any desinence ($j\bar{a}$ 'goes', p. 34, khā 'eats' p. 42, dē 'gives' p. 42, hō 'becomes', p. 102, lē 'takes' p. 86.

3rd. plural—the (a) form is -ahī is the most common e.g. hērahī 'they look for', p. 26) ānahī 'they bring' p. 28), there being only three instances of (b) (taullanti 'they weigh', p. 38, hasāhanti 'they purchase', p. 38, pajhālenti 'they wash', p. 106). Both go back to ancient - anti, -h- in (a) being for emphasis or to avoid the hiatus and the (b) forms being the ancient resuscitated forms of the Prakrits.

21. The Past Tense.

This is based on the ancient perfect participle. The variety of forms is confusing by abundance and the use is without any

^{-1.} Vide Allahabad University Studies Vol. II p. 212 Note 3.

reference to persons. The same form is found used with a first person, second person or third person subject. The following are the terminations:

- (a) $-\bar{o}$, $-\mathbf{u}$ ($\tilde{\mathbf{u}}$),, $-\mathbf{a}$, $-\bar{\mathbf{a}}$ in the singular and $\bar{\mathbf{e}}$ in the plural.
- (b) -aũ (-au).
- (c) -iao, iaũ (-iau), -iũ.
- (d) -ia, -iña, -ia.
- (e) -eo.
- (f) -ala, -ali.
- (a) There are four instances of this form in -ō (e.g. nimajjo 'sunk', p. 108, kharō 'stood', p. 106), 12 in -u (parn 'fell', jāgu 'awoke', p. 18, pasaru 'was spread' p. 32, pucchu 'asked', p. 58), about 20 in -a (paittha 'entered', p. 46, bhāga 'broke' p. 30) 4 in -ā (bhā 'became', p. 20, bikā 'was sold' p. 68, āā 'came' p. 94, bathurānā 'got together' p. 48) and 7 in -ē (paitthē 'entered', p. 38, bharē 'filled', p. 38, thārē 'stood', p. 46).
- (b) There is quite a large number of forms of this variety, it takes up with -ia the largest number. The nasalisation is absent in very few cases. For instance:

ũppanaữ 'born' p. 16, huaữ 'was', p. 8.

- (c) There is one instance of -iao (dhana choddiao 'wealth was abandoned' p. 22), but quite a large number of -iaū (e.g., kariaū 'did', p. 8, tumbe bhāriaũ 'you filled', p. 60 kariau 'did', p. 24. Only a few instances of -iū are found (e. g. jēna niña kula uddhariū 'who redeemed his family', p. 8).
- (d) A large number of forms are of this variety, -iña being merely a nasalised form of ia (e.g., jēna balē rāvaņa māria 'who killed Rāvaṇa by force', p. 8, riữ dalia tumhē 'you crushed the enemy', p. 60, mahala kō mamma jāniña 'he came to know the secrets of the palace' p. 52). There are only six instances of iā which is merely an elongation of ia for the sake of metre (e g. par bhare pathara curia 'the gravel crushed by the weight of feet', p. 46). In uggia 'co ne up', p. 32 and cukkiha 'missed', p. 62 we have -h-.

- (c) There are six instances of this form (e.g., junke saki karê manêratha pûrec 'who satisfied the longing of the king', p. 14).
- (f) Only 42 instances of this form are found. -ala is masculine and -ali feminine (e.g., suratāna samānala 'the Sultanhonoured', p. 10, rūsali bibhūti palatāe ānali 'the angered Prosperity was brought back', p. 14). In one instance the form ends in -ila (fem.) -gōmaṭha purila mahi 'the Earth was filled with temples', p. 44.

In the above forms we find several stages of the ancient perfect participle, simple and elongated, with i and without i. The nasalisation is inexplicable. The -1- forms are the participle base plus -ille termination Considering modern Maithili where all forms of past tenses are based on -1- participle, the small number of these in the present text is striking.

There is one instance of 3rd person plural verb (lehena rāya gaenera 'king Ganesvara profited', p. 18) where -ena appears as a personal termination.

Note.—the Perfect participle is in several cases found used as an adjective e g, wea padha 'well-read in the Vedas', p. 8).

22. Future Tense.

Only the following instances of the future are found in the text:

1st person kahabā 'I shall say', p. 10.

2nd person (tumbe na) hōsaũ (asahanā) 'you will not become angry', p. 60.

3rd person sg. hōsai 'will be', p. 4, 64, 64,
dūsihai 'will blame', p. 4,
sijhihai 'will be accomplished', p. 62,
kariha 'will do', p. 4, bujjhiha 'will understand',
p. 4, jivviha 'will live', p. 72, dharijjiha 'will
be kept', p. 74,
dijiha 'will give', p. 72,
hōia 'will be', p. 30.

Of these kahaba is based on tavy a > abba and the rest on the ancient future: hōsati < bhavisyatha > hōisaha > hōisahu > hōsau; the s later becomes -h- (e. g., in dusihai) and may even be lost e g, hōia).

Note.—The above are the forms of the Indicative mood. There are no separate forms for the Conjunctive, the forms of the Indicative are used with jai or jaño 'if' to indicate that sense. The conditional is based on the Imperfect Participle (see infra §24); only two instances of it are found (taño) sithhaata (rajja) 'then the kingship would be reestablished', p. 56 (ābe kata) sahata (je rāe) 'how would the king have put up with it till now', p. 74.

23. Imperative.

2nd sing.— there are eight instances: (a) in -a, suna p. 64, suna 'hear', p. 6, bhana p. 22, kaha kaha 'say' p. 80. anusara 'follow' p. 112, (b) in -hi, jaki (jahi) 'go' p. 112, (c) in -isu, karisu 'do' p. 62, harijjisu 'remove', p. 64. Of these (c) is possibly derived from ancient II sg. Atmanapada -sva (kurusva).

2nd plural—six instances are found: karahu, p. 20 kahahu p. 16, 50, 56, karao, p. 58, sunao p. 38, 16, bhuñjaha 'enjoy', p. 18, sajjaha sajjaha 'be ready', p. 82.

All these are based on the ancient second person present plural in -tha, which at some stage in the Prakrits become thō>hō>hu: ha.

3rd. sing.—'All the eight instances are based on ancient -tu (rahati 'may remain', p. 22, jati, p. 22, (jāu 'may go', p. 76, sāhau 'may rub' p. 10, jiau 'may live', p. 10, karau, p. 10, karao 'may do', p. 60 kariau 'may be done', p. 38).

Besides the above an impersonal passive imperative in -ai and -ia is found, e. g., ehu kamma na kariai 'let this not be done', p. 18, sēviai 'let him be served', p. 64, karijjai 'let it be done', p. 64, dhariai 'be kept' p. 18, jāia 'may go', p. 68, ānia 'bring', p. 68, chānia 'strain', p. 68. This is based on the Passive present.

24. THE IMPERFECT PARTICIPLE.

This is frequently used to describe a condition of things as it is and also sometimes used in place of the present tense finite verb. It has two forms:

- (a) -anta and (b) -ante
- (a) 'e g. abe be bhaṇantā (turukkā) 'the Turks saying abe, be, p. 40, āvantā jantā kajja karantā mānava 'man, coming, going and doing (his) business. p. 48, pūhavie pālā āvantā 'the kings (guardians of the Earth) are coming', p. 46.
- (b) e ghāthi jāthi bhāgantë gācha cāpantē 'the elephant goes running and cutting trees', p. 82, sikāra khelante paradappa bhami bhanjantē bāṭa santari surutāna baiṭha 'the Sultana passed the way, hunting, breaking other's pride by making a round, and sat', p. 98.
- Note 1. A few cases of -anta (bolanta 'speaking', p 74) tuttanta 'breaking' p. 106, budanta 'sinking', p 16, 106) and -anta (bhamantao 'roaming', p. 46) and -anto (karanto 'doing') are found.
- Note 2. On page 90 jaite 'going' and khaite 'eating' appear as forms of this participle. I should, however, connect them with the oblique form of the verbal noun (see infra 28) plus the postposition te,

This participle has been used in this text without any modification due to number or person. For instance on page 46 bhamantaō qualifies duaō rājakumāra 'both the princes', and on page 34 khandante etc. qualify vaiśyāhi - feminine.

The -ō and -ā (a) forms are the Nominative cases of the Prakrit participle. The ē form where it is nominative represents the māgadhī naminative in ē. In a few cases it is the locative of the participle, e.g. mahājanhi karō bōlantē 'while the elders spoke', p. 18.

Note.—At one place ante has been modified to adde (biharadde 'roaming', p. 46) for the sake of rhyme.

In alabana one who has not obtained, p. 34, is there an instance of ancient -ana termination (alabhamanah)?

25. THE ABSOLUTIVE.

This is expressed by adding (a) -i or (b) -ia e.g. gai 'having gone', ghai 'have caught'. p. 42, sādhi 'having held', p. 14; choddla 'having abandoned', p. 70, karia 'having done', p. 76, bittharia 'having spread' p. 88). There are only about a dozen instances of (b) and in one case, the termination appears as nasalised bissamiña 'having taken rest', p. 52. In a few cases the -i of (a) appears as -ē (e g. 'having done', p. 88, 90, manusāe 'having become angry', p. 96, dhāe 'having run', p. 62, dhāñe, p. 90).

The absolutive is generally found without a postposition, only kahű appears 6 times (dhāc kahu 'having run', p. 62, dammi kahű, 'having trampled'. p. 96, suni kahű 'having heard', p. 98, thelli kahű 'having flanked', p. 100) palati kahű 'having turned'. p. 110 sammaddi kahű having crushed', p. 8.

In jā 'having gone', p. 83, lē lē 'having taken', p. 40, the rootform itself expresses the absolutive and in bēcā 'having sold', p. 68, -ā and in pucchihi 'having asked', p. 52, -ihi appears to indicate an absolutive.

The derivation of -in, -i is from Prakrit in which may become -i and may disappear later (as in ja, le).

26. The Passive Voice

The synthetic passive, derivable from -ijja- and -ia- of the Prakrits, is found in 27 forms, 7 -j- and 20 -i-. For instance:

jenhe ruttha hua jama sahijjia

by whom angered yama was put up with; p. 76.

suha muhutta ahiséka kijjia

'at an auspicious moment coronation was performed', p. 76, aru kata dhügada dēkhiathi

'and how many strong men are seen', p. 90,

jë saba kariati appa basa

'by whom all was brought under his own control', p. 10.

The periphrastic passive, with \sqrt{j} is 'to go' appears only two, or three times; cūri jā basundharā 'the Earth is shattered', p. 84 bahuta bāpura cūri jāthi 'many poor people get trampled', p. 30.

27. The Causative.

There are about a dozen instances of the causative (e.g. palată 'having caused to return', p. 14, karāvae māri 'causes annihilation' p. 60, baiṭhāva 'causes to sit', p. 42), all derivable from the ancient causative in -ā and -āv.

28. The Verbal Noun

There are four instances of the direct case (jianā < jivana-ka living', p. 2J, basane pāñela 'were' able to live', p. 24, dēnā 'giving', p. 44, māri 'beating', p. 60) which should be connected with (a) ancient -ana- and (b) mag. -ē and ten cases of the oblique (jāi tē 'by going, p. 44 rahaitē 'to remain', p. 86, karaitē 'by doing', p. 62, sēvai 'for serving', p. 60, dīvai haņē 'at the time of drinking', p. 68 hiṇḍae 'to make round', p. 30, kinai tē 'for buying', p. 30, bikāē 'for selling', p. 30, chuae 'to touch', p. 68, bōlee, bōlae 'talking', p. 20). What is this oblique! Chatterji (Origin and Development of Bengali, p. 1014) calls it merely an oblique of verbal noun in -i, and takes -i as a suffix.

The direct (a) once ends in i (bujjhani 'understanding', p. 18).

The Noun of Agency.

There is only one instance of this bujjhani -hare one who understands', p. 18 - hare being derivable from -dharaka.

29. The Verb 'to be'.

We find the forms of three roots:

- (a) Vas, hai p. 40.
- (b) Vbhū (1) hō, p. 96. hōa, p. 36, hōi, p. 102, hua. p. 94 hōaū p. 80, huaū, p. 76, huaño p. 100, hōsai, p. 64, hōsaū, p. 60.

- (2) bhai, p. 100, bhae, p. 70, bhati, bhau, p. 98, bhēla, p. 102, bhēli p. 24.
 - (c) Vrah rahu, p. 96, rahai p. 42, 86, rahiau, p. 70.
 - 30. The Perciphrastic tenses.

Instances of the forms of the periphrastic tenses are rare. The following have been noticed:

āvatta hua 'was coming', p. 94. risiāi hai 'gets angry', p. 40. sahi rahiaŭ 'went on bearing', p. 70. tuṭṭi rahē 'got broken' p. 110.

31. The Compound Verbs

There are 24 instances of compound verbs:

- (a) Vcah expresses the aspect of desire: bhāgae caha 'wishes to run away i. e. is about to run away', p. 36. upara cadhāvae cāha ghōra' wants to (i.e. is about to) make the horse climb up', p 44.
- (b) $\sqrt{\text{lag}}$ to express the aspect of the inception of an action, bolee lagu began to speak, p. 20.
- (c) Vpāv and Vpār to express the aspect of the ability to do an action, kinaitē pāvathi 'is able to purchase', p. 30, basañe pāñela 'was able to reside', p. 24, chuae pāia 'is able to touch', p.68; gaṇae ṇa pārlā 'it is not possible to count', p. 46, gaṇae na pārlai 'it is not possible to count', p. 94, sababi na pārai 'is not able to bear', p. 60.
- (d) $\sqrt{j\bar{a}}$, $\sqrt{l\bar{e}}$, and $\sqrt{d\bar{e}}$ express the aspect of completeness or intensity of an action:

bhae, gēla 'became', p. 16, 60, bhara gae 'became filled' p. 104, dhāe gae 'having run', p. 108, lāghi jāthi 'jumps over', p. 84 bhae jā 'becomes', p. 86, jitī jā 'wins', p. 86, dekhāe jā 'shows', p. 100; khāi lē 'eats', p. 40, chōli lē 'seizes', p. 86, mēli dēño 'I shall bring' p. 110, bāhara kae dēla 'turned out', p. 80, dījihi bandha 'will tie' p. 72.

ADVERBS.

32. Of Place.

- (a) based on pronouns
- (1) 'where' -jam, p. 26, jahā, p. 108, 24, 68, jahim p. 38, 90, jaidha kē, p. 112, 'wherever' -jam jam, p. 98, jahim jahim. p. 106,
- (2) 'where?' -kai, p. 6; 'somewhere' -kahi, kahi, p 38, katahu p. 42, 44.
- (3) 'here' -ia, p. 48, ñehã, p. 58, ehu, p. 96
- (4) 'there'-taththa, p. 38, tam tam, p. 98, tāhā, p. 58, tahā p. 72, 108, tāhī, tāhī p. 106; ōhu, p. 96, uthi, utthi, p. 50
- (5) 'everywhere' -saba tahū, p. 38, 60, 'at one place' ēkattha, p. 8
- (b) based on other old adverbs
- 'above'-fippara, 34, fippari, p. 32, upara, p. 44 uppara, p. 90, uppari, p. 50, 'inside'-bhitara p. 42, 'in front' agri, p. 66, saño, p. 112, -sōjha, p. 112, 'behind'-pāchē, p. 94, pāchu, p. 102, 108, pacha, p. 40, pīchē, p. 96
- 'outside' -bāhara, p. 46, 80, bāharao, p. 62, 'near' -niara, p. 110, pāsa, p. 88; 'far off' -dūra, p. 38, 52, barā drūa, p. 60; 'on all sides' -eaupaṭa, p. 102, atarē paṭarē, p. 48.

33. Of time.

- (a) based on pronouns
- (1) 'when' -jam, p. 34, jaba, p. 66, jabē, p. 18, 16, 30, 34, jābē, p. 76, jamaņa, p. 40; 'whenever' -jaba hi p. 42, ja khaņē, p. 66, 96
- (2) 'now' -abe, p. 58, abahi, p. 62
- (3) 'then' -tā, p. 52, 116, taba, p. 100, tabbe, p. 56, 110, tabe, p. 22, 34, tābe, p. 76, tabahi, p. 42, tatā, p. 38, tau, p. 58, tou, p. 52, tam khanē p. 22, 26, tam khanē, p. 60, 72, 98, 112; 'even then' -tabahu, p. 42, 70, tabbahii, p. 58, ...

- (4) *sometimes '-kithaliu, p. 18, 90.
- (b) based on other adverbs

 'to day'-ajja, p. 58, ajju, p. 100, aja, p. 30; 'up till now'
 -adya paryanta, p. 50, 'first'-padhama, p. 58, 'long'-cire,
 p. 44, 'in the meantime'-iththentara, p. 64, eththantara,
 p. 62, 'again'-punu vi, p. 62, 76, punah, p. 56, punu, p. 12,
 18, 28, 56, 58, 64, 76, 112, niccai 'always', p. 4, sahasahi

34. Of manner.

(a) based on pronouns.

'all at once' p. 90.

- (1) 'as' -jimi, p. 86, jaő, p. 64, jaño, p. 42, jásavē p. 32.
- (2) 'how' -kaise p. 36, kimi, p. 4, 16, 72, 80 kimi kari, p. 80, kasa, p. 86, kāñi, p. 4, kamana, p. 4, kamane, p. 48, katta, p. 74.
- (3) 'in this way' -asa, p. 18.
- (b) based on other old adverbs'in this way' ēva, p. 70, ēvañca, p. 98, ēma, p. 52, 60, 112.

35. Other adverbs.

'no'-na, 20 times, e.g., p. 4, 6; na, 7 times e.g., p. 8, nahi, 14 times, e.g., p. 18, nahi, p. 90, nahi, p. 68, nāhi, p. 64, 94, nahu, p, 6, 18, nahu, p. 70; 'surely'-nāma, p. 4, hu, p. 6, dhua, 6 times, e.g., p. 64, avasa, p. 60, avasao, p 4, 26, bṛthā 'uselessly', p. 20, ati 'very much', p. 36, 40, 70, sasarā 'noisily', p. 36; 'why'-kāi, p. 98, kini, 'p. 82, ki, p 112, 'with'-sanga, p. 84, saththe, p. 112, 'et cetra'-prabhṛti, p. 86.

36. Conjunctions.

- (a) cumulative—'and'-avara, p. 100, aru, 10 times e.g., p. 8, avaru, 18, 22, 28, 106; 'moreover'-avi a, p. 28, api, 66.
- (b) alternative—varu, p. 22, ki, p. 22.
- (c) adversative—'but' pai, p. 20, 64, 72, 42, pae, p, 50, 'but not'-næ tina, p. 22, na tina, p. 22, na tina, p. 22, na una, p. 20, na nuna, p. 20;

- "if" -jai, 8 times, p. 6, je, p. 100, jaño p. 22, jo, p. 74, jan, p. 42, nam, p. 112, nam, p. 22,
- 'then'-atha, p. 16, 56, ta, p. 6, tam, p. 62, tau, p. 70, tov,i p. 102, to, 6 times, e.g., p. 60, tai p. 112, taño, p. 100, 'therefore'-taisana, p. 6; 'as if'-jani, 8 times, e.g., p. 48.
- (d) subordinative -ke; p. 74.
- 37. Emphatic forms.
 - (a) -hu, -o, -u are added after nouns, pronouns, adjectives and adverbs to give an inclusive sense, e.g., dhruvahu 'of Dhruva also', p. 34, baddeo 'big men also', p. 26, biggahau 'battle also', p. 72. There are about 30 such forms in the text. These terminations go back to khalu>khu>hu>u: o.
- (b) -hi, -i is added to the nouns, pronouns, adjectives and adverbs to expressive a restrictive sense, e.g., dhamma pasārai 'extension of virtue itself', p. 72, padhamahi 'at the very first', p. 82. There are about a dozen such forms in this text. The termination possibly goes back to ēva, -h being emphatic.

THE SIBILANTS IN THE BUDDHIST DOHAS.

Prabodh Chandra Bagchi.

Mahāmahopādhyāya Haraprafād Śāstri published, a few years ago, a number of Buddhist songs (caryas and dohās which he discovered in Nepal. He characterised the language of thees texts "old Bengali". Dr. S. K. Chatterji, however, after a more detailed study of these texts came to the conclusion that the songs only are written in what can be called "old Bengali" but the Dohās according to him present a dialect "which is a kind of Western (Saurasēni) Apabhramsa as its -u-nominatives, its -ahagenitives, its -ijja- passives and its general agreement in forms with the literary Western Apabhramsa amply indicate." (The Origin and Development of the Bengali Language I, p. 112). This dialect according to him played the same role, as the Brajabhākhā did in later times, in relation to the Eastern languages. He however admitted that though it was a Western dialect some old Bengali idioms and words had crept into it.

M. Shahidullah has recently made an intensive study of these texts, (Les Chants Mystiques de Kanha et Saraha, Paris, 1928) and has tried to establish that the language of these dohās is an Eastern Apabhramsa. In phonology he notices the preservation of palatal s. It is the most important characteristic of the old Bengali and, according to Mārkandeya, of the Odhrī dialect too In Sarvānanda's commentary to the Amarakosa (1159 A. D.) the two sibilants are found and an occasional confusion of the two sibilants is attested in some of the inscriptions of the Pālas.

The text published by H. P. Sāstri is very corrupt and the large number of mistakes, it seems to me, is to be attributed to the fault of the copyist. As the Mss. of the Dohās on which H. P. Sāstrī based his edition are now lost, M. Shahidullah had to depend only on the Tibetan translation for making his emendations, which are very valuable. But such emendations are helpful in making out the sense of the text but are not so useful for determining the forms of the words.

During my last stay in Nepal in 1929 I came upon a fragmentary plam-leaf MS of the Dohākośa of Saraha. In the same MS. I found two more fragmentary dohās which were not known hitherto. The MS. contains the date 220 Nepal Era i e. 1100 A. D. I discovered another MS. in a private collection which contains two dohās, one of Tillopāda and the other of Saraha. The text of Saraha's dohā is the same as published by Sāstrī and emended by Shahidullah The dohā of Tillopā was hitherto unknown. My edition of these dohās will be shortly published by the Calcutta University. But on collating the two mss. of the Dohākośa of Saraha I find that there is only one sibilant in the text and it is always dental. The two fragments of the other dohā of Saraha and the dohā of Tillopa present the same characteristics. Therefore the main phonological ground on which Shahidullah characterised this Apabhramsa as Eastern is baseless.

It is in the following cases in the Dohākośa of Saraha that Shahidullah found the palatal sibilant preserved. In the following list I will mention in order the number of the stanza in Saraha's dohā (text as published by Shahidullah), the word as established by Shahidullah and then its correct form as found in the newly discovered MS of the Dohākośa.

```
3 bese (but in 5, 6, 10 besa) = bese
7 sunaha = sunaha
siālaha = siālaha
19 sattha = sattha
(but in 58 and 70 sattha)
27 sasi = sasi
pabesa = pabesa
ubesa = ubesa
36 bisuddho = bisuddha
37 dose (Sāstri's text dose) = dose
46 sai (Sāstri's text sai) = sai
```

65 desa = desa

66 bisaa (Śāstri's text bisaya) = bisaa (but see 69, 72, 94, 103 where it is bisaa)

68 animisa (Sāstri's text animisa) = animisa

73 bisayāsatti = bisayāsatti

76 dosa (Sāstri's text dosa) = dosa

86 desahi = desahi

92 bisariaŭ (Śāastri's text bisamai, = bisariaŭ

96 kulisa = kulisa

99 duriasesa (Śāstri's text duriasesa) = duriasesa

In all other cases in the Dohākoṣa as published by Sāstrī and as emended by Shahidullah it is consistently the dental s that is used instead of s and s.

saalāsesa (61), sakai (54), sakkai (17), saranta (66), sarisa (50, 78, 86), sarira (91), sallatt (77), sambara (89), siri (56, 68), sisa (4), suaa (95), sukka (100), suņņa, suņa (16, 72), sudda (48), suddha (108), sunai (75), sunahu (57), sojjha, Sojjhu (5,3 101), sosa (10, 51, 93), sohai (85), sohia (40), pasu (23), pāsa (87), baisī (2, 4), biņasai (55), parisahu (57), paḍabesi (86, 88) bisarisa (86, 88), bisuddha (72), bisama (27).

Saraha, Fragment I, ase, darisanē, sissa, paissai, paisai, biņasai, bhuanāsi, paisi, aise, bisahi. Sarah Fragment II, barisantē, disai, paissai, disa, kīsa.

Tillopada—sunna, disai, kisa, bisohahu, bisahi, dosa, ubaēsē.

These are sufficient to indicate that in the Apabhramsa of these Buddhist dohās the use of sibilant was regularly confined to the dental s. The confusion that appears in the text published by Sāstrī is certainly due to the modern Nepalese copyist who can hardly distinguish between the dental and palatal sibilants in old manuscripts. Though I have not been able to discover any new manuscript of the Dohākosa of Kanha we will now be quite justified in reconstructing the few words which contain the palatal s: sasi (5), sattha (12), asesa, besa (21), sihara and sabasa (25) as even in these dohās of Kanha we see some regular use of dental; s instead

of the palatal siriphala (2), sunna (8), sosa (14), pasa (23), and sijjhai (24).

It therefore follows that there is nothing in the phonology of the dialect used in these dohās which would justify us in considering it to be an "Eastern Apabhramsa" if we understand by it some dialect from which Bengali is descended. Prof. Jules Bloch is quite clear on this point in his preface to the book of Shahidullah: "We may call it oriental because it is found in Eastern texts and because there are some Eastern influences but it is not so if we wish to find in it the base of the modern Eastern languages". Under these circumstances we can still consider the language of these dohās as Western Apabhramsa which was adopted by the Buddhist scholars of the Magadhan School for writing these texts sometime between the 8th and 10th centuries A. D.

THE PERSONAL PRONOUNS FIRST AND SECOND PLURAL IN THE DARDIC AND KAFIR LANGUAGES.

G. MORGENSTIERNE.

In an instructive article 1 Professor J. Bloch and Dr. H. Smith have recently discussed the treatment of Skt. sm, sm in middle and modern Indo-Aryan, and have added considerably to our understanding of the conflicting tendencies which have determined the development of these groups of consonants.

Yet many difficulties remain, especially in Dardic and Kafiri, as will appear from a survey of the forms of the personal pronouns, first and second plural, in these dialects. And, apart from the development of sm, sm, many other problems will meet us at every step of our investigation.

In Lhd we find [as(s)I], $[tus(s)I]^2$, derived, with sm, n > s(s), from asma-, tusma-, like must other modern I-A forms.

The same is the case with Kshm. 1. [as'], gen. [sôn*]; 2 tǒh', [tuhondu]. Note, however, that the treatment of -ṣm- does neither coincide with that of -sm-, nor with that of -ṣ- (cf. noš 'daughter-in-law', haš 'mother-in-law'), but with that of -ṣ- (cf. hühur 'father-in-law').

In Shina, too, the same type prevails, apart from the 1 pl. nom. be, about which further down. The Gilgit forms are: 1 obl. [550], 2 nom. and abl. [tsho]. Regarding the aspirated tsh, cf. [batshar] 'calf' etc. I heard tsah 'you' in the dialect of Pales in the Indus Kohistan.

Further developments to the abl. forms appear in the dialects of the Indus Kohistan:

Gauro 1	gen.	[as\$]	2 nom.	[tus],	gen.	[tusa]
Chilis	,,	[azã]	,,	91	"	[t : #]
Maiya	"	[z\$]	,,	"	,,	[88].

^{1.} Mémoires de la Société de Linguistique, XXIII, pp. 261-73.

^{2.} Froms not noted by myself are given within square brackets.

The more archaic forms, found in Gauro, have also been preserved in Palola, a dialect spoken in Ashred and other villages in Southern Chitral, and closely related to Sh., and its offshoot Savi, from the Kunar valley near Asmar. cf. e.g Pal. 1 dat asam. 2 nom. tus. dat. tusam.

In Sh., and connected dialects, too, the development of -sm-differs from that of -s., which generally remains. Likewise in Torwali and Bashkarik (= Garwi), the westernmost dialects where the type "tusma- is found, the forms are twa (<"tuha) [Stein tō, thō], and tha. But e.g. Torw. [muš] (prob. = mūṣ) 'mouse', pais 'mother-in-law', Bashk. mūṣ, čiš, and čā'ṣ 'flea' (<"praṣ-), cf. Torw. kəṣən, Bashk. kīṣin 'black' < kṛṣṇa-. In fact, in no Dardic dialect does ṣ n result in ṣ, and the development to s, h can scarcely have passed through a stage *ṣṣ.

The sm of asma-becomes m in Torw ma, Bashk. ma; and among all the dialects further west. Prasun is the only one which presents the development sm>s.

In most of the Western Dardic dialects we find sm>s. Thus Dameli¹ 1 obl. amâ, Gawar Bati amô 'we' Kalasha hāma, hōma (abl.) Kati emo, Waigeli amī, yāma, Ashkun ima, Pashai (h)amā etc., Tirahi mā.

To a great extent the same dialects have also $m < 2 \text{ sm}^*$: Dam. myā 'you' (obl.), G. B. mē, Kal. memi, mīmī (obl.), Ashk. yūm - ba (gen.; one sub-dialect has nom. yā). Pashai ima, (h) emā, myā, mōmā, Pras. muū, mīu.

Ashk is the only dialect which, if appearances do not deceive, has preserved the y- of yuşma. But myā, mīū, mē, mē mī, ima etc. must probably be derived from "ymā, syncopated from yum (h)ā. h is not a Katiri sound, so it is very doubtful whether şm (sm) in these dialects has passed through a stage *mh.

^{1.} Dam, is a dialect with Kafiri affinities which is spoken in one village in Southern Chitral, near Arandu.

^{2.} Or *sm. In Kafiri us apparently did not become us.

Kati šo 'you' is very difficult to explain. A derivation from *şya (or *sya) < *ṣmya-) (smya) < *y(u)ṣma- (*yusma-) seems possible. But it would presuppose either a preservation of ṣm(sm) till after the contraction of *yuṣma- > *yṣma- > *ṣmya- had taken place, or a development of ṣm (sm) to *ṣ (s) in this word, while sm resulted in m in 'emo' (we)¹. Another possible derivation would be from *yūṣa- (yūsa-) > *yṣa- etc.

N. W. Pashai momā, Kal. mēmī, mīmī seem to have been formed through reduplication, in order to obtain the same number of syllables as hamā, and hāma, hōma 'we'.

Prasun, the most isolated among the Kafir dialects, has s < sm in nom. 4se 'we'. gen. as cf. e. 7. Mahrāṣṭrī nom. amhe, gen. amha (m). 2 gen. as-en might possibly be derived from "usma-, cf. Singh. umba, oba, explained in this manner by H. Smith (l. c. p. 272). I cannot make any guess at the origin of the suffix -en; But Munji mox 'we' (*ahmaxam), mof 'you' (*(yušmaßya) show how different case endings can be utilized for the purpose of distinguishing between the 1 and 2 pl., when the stems have become homonymous.

But Pras. mīū 'you' with m < ṣm, and original y- is difficult to reconcile with an eventual development of as- < *usma-. On the other hand, mīū can scarcely be borrowed. At any rate none of dialects adjoining Pras. present a similar form.

Khowar, which is the dialect where the development of sv, sv into sp, sp has been carried out with the greatest regularity, has ispa 'we' < *spa < asma².

⁽¹⁾ A development sm > s is not probable. Kati gariš. Ashk. gerės, Waig. garáš 'midday' cannot, as proposed by Bloch (l c. p. 263), be derived from grīṣma, which would result in Kali *gr'Iṣ, Ashk. M. *glīṣ, or similar forms. gəriš etc. < *gha asya-cf. Khow. graniš, Pash L. lyenī < *ghranasya-, formed from I. E. *g"horos, and gwhrenes- (cf. Skr. ghramasya- 'heat of the sun', Breton groez < *gwhrens- etc.). *ghranasya- might possibly result in Kati *gr'Iš > *gər'iš but not in gəriš.

⁽²⁾ Wakhi (i) spā 'our' has been borrowed from Khow.

There remains a number of forms containing v (w) and b.

The be 'we' of Shina, Palola, and the dialects of the Indus Kohistan, Bloch (l. c. p. 264) 'hesite a faire remoter à bhe attesté (assez mal, il est vrai____) en prakrit, et remontant hypothétiquement a "ambhe'. This hesitation is well founded. The coexistence of be < *(am)bhe < "asme, and as- < asma- in the same dialect would be surprising, and, besides, Palola regularly preserves the aspiration of mediae. On the other hand, a derivation from vayam is phonetically legitimate, and several Prkrkit dialects have 1 pl. nom. vayam etc., while generalizing the base "tusma- in the 2 pl.

But Shumashti ¹ ābə 'we' cannot be be derived from vayam, but probably from ⁸a(m)bhe. The obl. bases, ama and ima, have been borrowed from Pashai. Kalasha ābi 'we' one is inclined to explain in the same manner. The loss of aspiration in intervocalic position is not impossible in Kal². Besides, there is a possibility of ⁸ābhē and ⁸bē having been contaminated.

The different treatment of *mh in ābi 'we', and hamā 'us' may, perhaps, be due to an original difference of accent, *amhe (am-he?) resulting in ambhe > ab(h)i, and *amhā- (amhā-?) in (h)amā. At any rate a derivation of abi from vayam seems to be excluded.

If the explanation proposed is correct, $\bar{a}bi$ 'you' in its turn ought to be derived from *umbhe. But Kal. is not so eccentric in its vowel changes as Prasun, and the development $u->\bar{a}-$ seems very strange.

^{1.} Shumashti is spoken in a side-valley of the lower Kunar, and is surrounded by Pashai dialects, by which it has been influenced. Its nearest affinities are with Gawar Bati; but the personal pronouns differ in the two dialects.

^{2.} I know no certain instance of the treatment of aspirated mediae in a similar position in Kal. Neither guhum 'wheat', nor jip 'tongue' present exactly the same phonetical conditions as abi.

The homophony between Kal ābi 'we' and ābi 'you' can be tolerated in the nom., where the verb will show which person is meant. In the oblique cases we find the two distinct bases hamā and mēmī.

Khowar bisa 'you' is the more archaic form. The more usual pisa has probably got its p from ispa¹. These forms cannot be derived from yusma-, which would have resulted in Khow. ²ispa. bisa points to ²*bsa < ²*v(a)sa. Bloch (1 c p. 266) has shown that an initial labial in some cases dissimilates a following sm into ss, and it is possible that ²vasma- (formed on the analogy of asma-, with the initial of vah), ²vusma- resulted in *vas(s)a, while asma- developed into ²aspa-.

Shumashti nom. 2 pl. vī must be derived from an older from "vē. In this dialect ancient vi- becomes i (isī '20', ire 'man'), but vē- > vī (vīu 'willow'). Now several Dard dialects present traces of the development of -as into -e, known also from the dialect of the Kharoshtni inscriptions². Waig. se, Torw. sē. Shumashti etc. ase 'that', are probably derived from "sas. Consequently vī can be derived from "vas. Regarding the use of the enclitic pronoun for the nom., cf. Parachi wa 'you'.

Ashk., Waig. vī, Dam. bi 'you' (nom.) must be explained in the same way. All these dialects belong to the same geographical area as Shum. In Dam v- regularly becomes b-. The genitives in the various Waig. dialects are: vām, īmbā - ivīmbā (-bā being the suffix of the gen.). Here, perhaps, a contamination of the types "yumhe and "ve(< "vas) may have taken place.

In Dam, the 1 sg. ai is used for the pl., too. The reason for this may be a wish to avoid a homophony between bi 'we' and bi 'you. In Tirahi the sg. tu is used for the 2 pl. but the 1 pl. is mā < ahmā-.

⁽¹⁾ Or dialectically *psa < *bsa?

⁽²⁾ Konow, CIL. II, I, p. CXII.

⁽³⁾ Or tu < tuh < tus ?

The suggestions offered here regarding the derivation of the personal pronouns 1 and 2 pl. in the Dardic and Kafir dialects do not pretend to solve all the difficulties. In many, perhaps in most cases, the lack of material from older stages of the development of these dialects does not permit us arrive at any certain conclusions, and too much remains mere guess work. Still I hope that these pages may contribute a little to the knowledge of a most interesting group of Aryan lauguages, for the study of which Sir George Grierson has laid the firm foundation.

The following table gives a survey of the forms appearing in the Dardic dialects of the personal pronouns, 1 and 2 pl. The arrangement is approximately geographical. The forms of the 1 pl. in each dialect are given in the first line, those of the 2 pl. in the second. Where distinct bases for the nom. and oblique bases exist, the nom. is given first Dialect forms are put within brackets.

THE OLDEST GRAMMAR OF HINDUSTANL

Suniti Kumar Chatterji.

- § 1. Johannes Josua Ketelaer, who was born at Elbingen in Prussia and served in India under the Dutch East India Company during the first two decades of the 18th century, wrote, in Latin, the first grammar of Hindustani. The exact date when the work was prepared is not known; it was published from Leyden in 1743, being incorporated in a volume of dissertations on Mohammedan, Biblical and other oriental subjects written and edited by David Mill (Millius),—but it was evidently written before 1716 when Ketelaer went to Persia, where he died. The tentative date suggested for the work is c. 1715.
- § 2. Signor Emilio Teza first brought the work to the notice of modern scholars, in January 1895, when he read a paper (Dei primi Studi delle Lingue indostaniche alle note di G. A Grierson') before the Reale Accademia dei Lincei of Rome. supplementing the article which Sir George A. Grierson wrote on the 'Early Study of Indian Vernaculars in Europe' which appeared in the JASB. for 1893, Part I. In the proceedings of the ASB. for May 1895, an abstract of Signor Teza's paper was given by Sir George, in which he included a note on the life of Ketelaer by W. Irvine. Signor Teza evidently had not seen Ketelaer's book, but he had found a mention of it in the Preface of the Hindustani Grammar by B. Schultze, published from .Halle in Saxony in 1744; and Ketelaer's Version of the Lord's Prayer in Hindustani quoted by Teza (and then by Sir George) seems also to have been taken from Schultze. In the LSI., Vol. IX (Western Hindi and Panjabi), pp 6-8, the biographical note on Ketelaer has been given, together with a brief account of Mill's work and Ketelaer's Grammar, some peculiarities of which have been noted by Sir George. The Lord's Prayer as translated by Ketelaer has also been reproduced, in which one or two misprints have crept in. This is the fullest description of the work I have seen

- \$3. The value of the work of Ketelaer in studying the development of Hindustani is quite apparent. The formation of Hindustani is one of the yet unsolved problems of New Indo-Aryan Linguistics. Ketelaer's grammar is a rare document giving an early observer's record of a current form of the language while it was still in a fluid stage. European missionary and commercial activity working under the stimulus received from the spirit of curiosity roused by the Renaissance, had naturally to take into note the languages of the land, in India and elsewhere. Already in the 17th century grammars of Tamil and Goanese were written and published by the Portuguese missionaries. Bengali seems also to have been studied with some care during that century; but the first grammar and vocabulary of the language to see the light was that by Padre Manoel da Assumpçao, which appeared in 1743 from Lisbon, in Portuguese and in the Roman character (a reprint of this grammar, with a Bengali translation, and with considerable extracts from the vocabulary, has been published by the Calcutta University under the joint-editorship of Mr. Priyaranjan Sen and myself). The first Hindustani grammar, going back to over two centuries from now, is well worth a detailed consideration.
- § 4. In 1921 while I was in England I was fortunate in accidentally securing at a second-hand bookseller's a copy of Mill's entire work (the full title of which is given in the LSI., IX, p. 7, and I do not repeat it), and this has enabled me to study Ketelaer's work. In addition to the Hindustani grammar (Do Lingua Hindustanica, forming the first chapter, pp. 455-488, of the Miscellanea Orientalia), Ketelaer seems also to have been responsible for three Hindustani vocabularies in Mill's work. It may be mentioned that Ketelaer's authorship of the Hindustani grammar is acknowledged in Mill's Preface; and there mention is made of his writing the Hindustani miscellanies in the 'Belgic' idiom (Dutch is obviously meant) which were translated into Latin by Mill. The Hindustani grammar is followed by the 'Rudiments of the Persian Language of to-day, as in use in

Hindustan, and in the Courts of the Mohammadan Kings of India'. forming Section I of Chapter II of the Miscellanea Orientalia, This grammar is a very short one (pp. 489 - 503) and in all likelihood it is from Ketelaer, too. Added to the grammar is a list of some 140 verbs (pp. 503-509) given in three columns, in Latin, Hindustani and Persian; and a vocabulary of some 650 words, in Latin, Hindustani, Persian and Arabic (pp. 510-598); and following this, forming Section II of Chapter II of the Miscellanea Orientalia, is a collection of what appeared to Ketelaer to be homonyms or slightly different words from Hindustani (pp. 599— 601). This last should have come along with the Hindustan grammar, forming Chapter I of the Miscellany. The Persien and Arabic words are given in the Arabic character, but tha Hindustani is everywhere in the Roman. In the above-mentioned quadrilingual vocabulary ('Etymologicum Orientale Harmonicum'). there is in the foot-notes a learned lexical and comparative commentary on the Arabic words which is evidently from Mill himself. Mill gives references to the occurrence of the Arabic words in the Arabic verson of the Bible, and quotes Hebrew equivalents. In considering Ketelaer's work, these Hindustani vocabularies have also to be taken into account.

written down by some one with a very bad ear for foreign sounds and a worse way of representing them—it may be that Ketelaer himself was not responsible for it. For example with a printed in the plate as well: are indicated in the pronunciation tables as ang gha (for [An Afie] = am ah). This is how the pronunciation of the Devanagari letters is sought to be expressed:

 $\mathbf{x} = \mathbf{k}$ ('like keph of the Arabs'), $\mathbf{x} = \mathbf{k}$ ('like kaph of the Arabs'), $\eta = gha$ ('pronounce like \dot{z} of the Arabs'), u = dgja(' like Arabic 7'-evidently the Egyption value of 7 was known to the writer), s = nia, 司双司讯 = tgja, tscha, dhea, dgja, ৰ = mia (' does not differ from letter No. 6 = স্ব'), চচভচ = tha, tscha, dha, dhgja, u = nrha (this is an attempt to indicate the value of ए = डॅ), तथद्धन = ta, tha, dha, da, na, पफ ब म म = pa, pha, ba, bham, ma, यरलव = ja, ra. la, wa, शषसहळ = sjang, k'cho,[sja, ha, lang (the North Indian value of q as kh indicated as k'cho, is interesting to note), and $\bar{\eta} = k'cha$. Then follow the consonant conjuncts with vowels-pa, pa, pi, pI etc. In two other plates the Devanagari letters are given again three times, with Roman transliterations along with the letters on the plates. In the plate opposite p. 458 are given the Devanagari letters twice, under headings I. Devanagaram and II. Balabandu, and they figure again in a following plate. I. Devanagaram is badly copied out for the plate, and uses of for the z: this would seen to be taken from some North Indian pandit. II. Balabandu evidently comes from Mahārāṣṭra, judging from the style of the letters. The two transcriptions in this plate differ from each other, and although the aspirates and the cerebrals have not been properly rendered, they are on the whole much better than the absurd equivalents given in the text. In this plate, si su: are transcribed as am aba (for [Am Ahe]) and T as tize and stshae (for a of = ch pronunciation). The last plate of Devanagari reproduces a beautiful Benares hand, and the transliteration is much better done, with the aspirates

properly differentiated from the pure stops by h; the values of the letters were taken down from a Bengali-perhaps an East Bengali pandit;—they are almost identical with the transliterations given for the Bengali letters (equally beautifully written and reproduced) in the plate following: in both of these, इ ज ण are transcribed as oua ya ana, following the Bengali names of these letters [uwo, ijo, ano], 可要 as sa sha (or scha), corresponding to the East Bengali values [180, 80], a as sia (i.e. ja, Bengali pronunciation of q being j), स as sha, ज as kha, and छं आ; as ang ach (in North India 3: would be pronounced as aha). These various transcriptions of the Devanagari alphabet during the first half of the 15th century have some slight interest in New Indo-Aryan phonetics. In addition to the above, K.'s grammar includes another plate giving the Lantsha and Tibetan alphabets, as well as the Mongol equivalents of these, with Romam transliteration. These plates of alphabets, together with the notes and references in this introductory section,—it may be the entire section on the letters—seems to be Mill's addition; but K. might have brought the alphabets written on sheets of paper from India.

- § 6. The grammar proper begins from the third page of the work. There is nothing said about the pronunciation of Hindustani—the author seems to take it for granted that his Dutch values of the Roman letters are known to his readers, and he starts at once with the *Declinationes Linguae Hindustanicae*. K's attempt to render the Hindustani sounds he heard is quite interesting, and is not without significance in the study of Hindustani phonology.
- § 7. The vowels which K. heard seem to have been the same, r very much the same found in Hindustani of Western Hindustan.

ā is represented by a commonly, by e frequently and by o rarely: e.g. sachti (saxti), bandoech (banduq), karta (kartā); tsjenga (saŭgā), carres (xaraj), telle (talē), gea (gayā), der (ḍar), nenga

- (nangā), kesmet (xizmat, xidmat), benaje (banāī); koo mat (kahō mat), somsje (samjhe), etc. 29 in hæddi(haḍḍI), karromæt (karāmāt) etc. is exceptional.
- § 8. ā is represented by a, aa: beetha (bēṭā), -ka (-kā), boedia (buṛhiyā) admi (ādmī), ank or anck (ākh), kja (kyā,) kiswaste (kis wāstē); baab (bāp), maa (mā), nimaas (namāz), jaad (yād), peaar (pyār); etc. Exceptions are—ao in naom (nām), 89 in gæli (gālī), ay in kay tsjoeke (khā cukā), boeray (burā; or ? burā'ī), auw in derriauw (daryā), o in karromæt (karāmāt). Finally, -ā is often denoted by -e or -89, especially in the verb forms: e. g. degge (dagā), poeranne (purānā), teere (tērah, 13) beside teera (terā = thy), me packerte (maī pakaṛtā), me paetste (maī puchtā) me dounte (maī ḍhūṛhtā), ayæ hoeæ (āyā hū'ā), etc.
- § 9. i = i, rarely ie: gin (\sqrt{gin}), sicheghe (sikhëgā, sikhûgā), tiesra dien (tisrā din); in duwanna (diwāna), we have u for i. [ie, is often written as je especially at the end of a word].
- ī = ie, also i : tier (tīr), darie (dāṛhī), nietsje (nīcē), alamgiere ('ālam-gīrī); teeri (terī), patsjayi (pātšāhī), etc. In a few instances it seems finally -e indicates -I: e. g. alamgiere ('ālamgīrī). Final -I also = y (i.e. ii): bhay (bhāī), koy (kōī), dsjamway (jawāī), boeray (burāī).
- § 10. u is represented by u, o and oe, and ū generally by oe: sust (sust), poeranne (purānā), bod (but), moft (muft), Godda (xudā), hunga (hūṅgā) poeroeb (pūrub for pūrab), pokkar (pukār), dejoeroe (jōrū), toesjæ (tujhē), boellonga (bhuluṅgā), etc. The digraph oe (= u, ū) is peculiarly Dutch.
- § 11. ē is generally indicated by ee, also by e: beethase (bēṭā-sē for bēṭe-sē), teei (tel), andeer (andhēr), deete (dētā), tsjyé (cāhiyē) etc. Transcriptions like toesjæ (tujhē), with æ for ē, are exceptional.
- § 12. ŏ is indicated by oo, also by o: dhoobi (dhōbī), doost (dōst). toop (tōp), ankkon(\$kh-kō), gorra (ghōrā), me dsjoetboltetha

- (mai jhūth boltā thā), tsjoori (corī,), koo (kaho), soo (so'o), hougea (ho gayā), etc. We have oe in dsjoeroe (jorū), Cf. auw, kauw' dsjauw = āo, khāo, jāo.
- § 13. From the frequent use of e and o for short i and u, it is likely that these short values of e and o were actually heard: e. g. tommare (tumhārā), sāheb (sāhib), goelam beside golammi (qulām, qulāmi), hoekem (hukm).
- § 14. ai: it seems that K. heard the modern sound of [39] or [388], and this he indicated by e, ey, 39 and also in a weak position by a: e.g. me (mai), he (hai), medda (maidā), peyssa (paisā), beth, betth (baiṭh), kensch (khaīc), sethan (šaitān), paedda (paidā); ghoebha (xub hai), bhel (bail), kapprel (khaprail), innekom pakkertaja (inhē kō or inko pakartā hai), etc.
- § 15. au: the modern values of [5] or [5] seems to be indicated by K.'s transcriptions o, oo and ou: kon (kaun), tsjockje (caukī 'watch'), oor (aur) loondi (laundī), tsjoute (cauthā), hathorie (=hathaurī), doure (daurō), etc.
- § 16. The present day Hindustani modification of vowels—especially of ă—in connexion with a following h seems also to have characterised the language heard by K. The group ah then as now = [28]: e.g. bhen (bahin: the pronunciation heard by K. was probably [b'e:n]), pelle (pahilā), dhaina haat beside dana haat (for [dæhna: fia:th] = dahinā hāth), penne (pahinē), ney (nahī), tsjoeprea (cūp rahā), ree (rahe), (but cf. ro = rah, imperative 2 sg.), reena (rahāā), gerra (gahrā, gahirā) etc. In triyé, tsjeyte we have doubtless an attempt to represent cāhiyā, cāhtā [c]æie, c]æta:], which we after hear for cāhiye, cāhtā. Cf. also merwan = mihrwān.
- § 17. Loss of vowel: an unaccented short vowel is often dropped: brabber (bărābar), frusta for *frista (fĕrišta), ghlas (xálās), bras (báras).

The converse process of vowel insertion also is noticed: boellana (bhulnā), isseka (iskā), innekon (inkō).

- § 18. Nasalised vowels: at times the nasalisation is dropped, but generally there is an attempt to indicate it by an n: me (mai, also mē), hastæ (hāstā), ghawar beside gemaer (gāwār); oenth (ūt), ontsjata (fūcātā = 'height'), ank or anck (ākh), ocanse (wahā-sē); the propositions -kon, -son (-kō, -sō), aandhoe (ārū = 'juvencus'), kenschna (khaīcnā), etc Cf. bhaina haat = bāyā hāth.
 - § 19 The consonants are those now found in Hindustani. The foreign sounds of q, x, f and z seem already to have been commonly heard—at least in court circles—for K. attempts to indicate them The case of q is not so sure, and it is quite likely that ordinarily k was substituted for it.

k is denoted asually by k, and frequently by kk and ek; e. g. kaam (kām) kar (kar), akkele (akelā), hockum (hukm), lackrie (lakrī), poekkar or pokkar (pukār), kon (kő = -kō), tsjoeke (cukā), paak (pāk), karnekon (karnekō), uska (uskā). Cf. taxier = taksir (for taqsir).

kh, the Indian aspirate, presented a difficulty to K Usually he writes k, specially initially; but kh, and even kgh are employed, as well as kk and ch (the value of the last was [x], the velar fricative). Thus - kapprel (khaprail), rak (rakh), rakkena (rakhnā), sukka (sukhā), dichaya, sichaya (dikh, sikh), khaoungæ (khāŭgā), kghattæ (khātā), kaytsjoeke (khā cukā), duchie (dukhi = sick), kensch (khaīc). In rang (rākh = ashes), we have g with tho usual Dutch value of [x] for kh.

g is usually transcribed by g: girre (givā), gied (gīt), gautatha (gāwtā thā = gātā thā), dilgien (dilgīn), gona (gunāh). g certainly had the present value of an unvoiced spirant g - [g], or [x]—in Dutch of the 18th century, as we can see from the treatment of [x] in Hindustani words (see below). To represent the stop sound with this spirant g of Dutch, it offered some difficulties to Ketelaer. In one instance we have the use of ch - [x] for g: jachte-jāgtā: here the use of j (which has the sound of y in Dutch) for the palatal fricative (=j as in English) also is inexplicable.

g is sometimes represented by gh: ghir beside gir (gir), ghai (gāē), ghawar besides gemaer (gāwār), gherden (gardan), aagh (āg), me sicheghe (mai sikhegā for sikhungā). The interchange between aspirates and unaspirated stops is exceedingly common in K, who seems to have appreciated the difference, but could not always successfully note them, and frequently made mistakes. See note below, under § 37.

For gh, K. uses g: gora (ghōrā), gaas (ghās); also gh, e.g. ghe, (ghar) beside ger.

For the guttural nasal n, occurring in Hindustani only before (h) and g(h), n is employed: ank or anck (ãkh), hassonga (hásegā, kbásūngā), tsjenga (cangā), etc. Final ng = ngh, as in rengh (rang), singh (sing).

§ 20. The foreign sound of q might have been heard, but it could not have been common: it would seem that [k], or [x] was substituted for it in India, at least among the people in some parts. We have no attempt at consistency: e.g. khalm (qalam), nachara (naqqāra), bandoech (banduq), ghasie (= xāzī, for qāzī) wacht (waqt: vaxāt for waqt is common in the Panjab), carres karres (qarz), kanuna (qānūn) etc.

Hindustani seems to have already adopted the foreign sound of [x], and Ketelaer has taken pains to indicate it. He uses g (with its Dutch value of [x]), gh and ch, as well as k for this sound: e.g. godda (xudā), gesmet beside ghesmet and kesmet (xizmāt, xidmat), ghallie (xālī), gheen (xun), ghabber (xabr), chartsjeraa (xarc ĕ-rāh), biandighanna (baudīxāna), ghossjali (xuš bālī), sachtie (saxtī), dosek (duzax), baksnese (baxšnē-sē), etc. The spelling Godda = xudā may have been partly due to Ketelaer's fancied connexion with the Dutch word God [= xod].

[g]: this sound would seem not to have been common—probably it was pronounced, as now, as g, except among learned circles. Ketelaer writes g: golami, goelam (gulāmī, gulām) garieb (garīb), deggabasi (dagābāzī), deggæ (dagā), tsjogģlie (cuglī), morga, morgi (aurgā, munī), etc.

§ 21. c, ch, j, jh presented difficulties to K., and we find a number of curious devices employed For c, we have usually tsj (i.e. tš), but tsch (as in German), ts, sch and s are also used: tsjockjedaar (caukīdār), moetsje (mūcī), tsitter (cittar, citr = citra), mirritsch (miric), kenschte, kenste (khaīctā), tsijand (cand), etc. tsjettia = tsjettja (caccā) shows the Dutch use of tj for c.

ch is represented by tsj (like c), as well as ts, s: poetsjonga (puchūngā, puchēgā), tsjorre (chorā), poetste (puchtā), tsjoekna for tsjokra (chōkrā), tsjinaal (chināl), ries (rlch), t'sjain(chāế = Skt. chāyā), etc.

j—by dsj (the proper way, = dž), and by sj, ds, dz, dj, and s: e.g. dsjieve (jīw, jī), dsjieuv (jibh), dsjate (jātā), ne dsante (na jāntā), dzamah beside dsjamma (jāma), sjawaab (jawāb), sjad (jad), sjagghe (jāgāh), sjoanna (jawānā), madzmaa (majmu'a), dzaladie (jaldī), wadzudi (wajūdī), hadjam (hajjām), pāssieste (pasījtā) etc. Quite contrary to Dutch (and continental) pronunciation is the use of j in jokoy (jō kōī), jachte (jāgtā) and jutte (jutā).

jh: dsj, s are used: dsjoet (jhuth), somsje (samjhe), boos (bojh) toesjæ (tujhe).

- § 22. Ketelaer has not been able to distinguish, at least in his transliteration, between the cerebrals and the dentals: and the aspirates and pure stops are also confused. Thus—tapoe (ṭāpū), rootie (rōṭī), pethie (peṭī), koetonga (kuṭuṅgā), koethena (kuṭnā), tookrie (ṭōkrī), beetha (beṭā), moetha (mōṭā); djoet (jhuṭh), beth, betth (baiṭh), oethoute (uṭhautā = uṭhātā); dhoeba (ḍūbā), der (ḍar), tidda (ṭiḍḍā); dounte (dhūṛhtā), loondi (launḍī), etc.
- § 23. r rh, derived from intervocal and final single d, dh—the so-called cerebal r and its aspirate—are represented in a number of ways: lerreghe (laregā), dourr (daur), karwa kerwa (karwā), barra (barā), toorte (tortā), garriwan (gāriwān), aandhoe (—'juvencus', ārū), raand (rār), gora (ghōrā), (beside gorra), cerre (sarā); boedia (burhiyā), boedha (burhā or budḍhā), lackrie

(lakți), orrhega orre orrhena (ôrhēgā, ôrhā, ôrhnā), darie (dārhī), etc.

§ 24. The dental t th d dh are represented by t th d dh, but there is interchange of the aspirated and non-aspirated forms in Ketelaer's transliteration: tom (tum), tier (tIr), doost (dost), touttha (tuthiyā), haat (hāth), tha (thā), tannadaar (thānādār), patter (patthar), hathonie for hathorie (hathaurī), mothie (motI), koettha (kuttā), batthie (battī), hatti (hāthī), deete (dētā), also dithe, faidah (fā'ida), andeer (andhēr), gedde (gaddhā, gadhā) (also gheddai), koedhe (kūde), dhimer (dhīmar), dooe (dhowē), dhoed (dūdh), dhoela dhoelen (dulhā dulhan), doel (dhūl), ghido (= gīdh), dhee (deh = body), etc. etc.

n is represented by n (in printing, frequently n has been put in for r): nischan (nišān), gonna (gunāh), noen (nūn, dialectal for lon = salt), etc.

- § 25. p ph b bh: there is confusion between pure stops and asp rates: parwet (parwat = parbat), peyssa (paisā), kappra (kapṛā), pethie (peṭī), oepper (upar), patsjayi (pātšāhi); pharte (phāṛtā), phergte for phengte (phēktā), phitkeri (phiṭkārī), poslaute (phuslāwtā = phuslātā); beetha (beṭā), baab (bāp), bod (but), boed (bhūt), bhay (bhāī), boelle (bhulē), gabroe (gabhru), etc. The use of v in dsjieuv = jībh is curious. For m, the transliteration is m: maa (mš), kham (khām), sjamidaan (šama'dān), etc.
- § 26. f occurs in words of non-Indian origin, and K. writes them f, differentiating from the native ph. Examples are copious. In one place it seems we have f for ph in a native word: tajolte serte for tajelte ferte = calta phirta. In court circles at least, f seems to have become established.
- § 27. y is indicated by j-j and $(y\bar{a}d)$ kjon $(ky\delta)$, gaija $(g\bar{a}iy\bar{a}=g\bar{a}y\bar{a})$ and by y—sichaya $(sikh\bar{a}y\bar{a})$; cf. tsjy $\delta=[c\bar{a}hiy\bar{e}]$ for $c\bar{a}hiy\bar{e}$.
- § 28. r and l are represented by r and l, sometimes doubled: beakarre (byāh karē), sjullaab (julāb), gullaab (gulāb), etc.

- § 29. Hindustani w is represented by w and v, and uw: lakriewala (lakrīwālā), haweli (hawelī), hauwa (bawā), dsjieve (jīw = jī), karwā (karwā), meyuwa (mēwa), auwe (āwē), ewwel (awwal), mervan (mihrwān), khavigæ (khāwēgā); oeaanse = wahāsē, soorrauri = zōrāwarī, give oe and u for wa. A nasalised w is indicated by mw and by w: dsjamway (jāwāe = son-in-law), and ghawar beside gemaer (gāwār). After -ā in certain forms, a w sound occurred in Ketelaer's time: this is dropped now: e.g. kauéna (= khāwənā, now khānā), me gauta tha (mai gāwtā thā for gātā thā), gauwena (gāwənā, cf. Bengali gāonā, for gānā), auwena dsjauwena (= āwənā, jāwənā = ānā jānā), etc. The groups wŏh, wē are represented by whe.
- § 30. s: the following will illustrate K.'s transliteration: isseka (iskā), paroosje (parōsī), tisra (tisrā), soei (sūī), cissa (sīsā), payssa (paisā), circa (sirka), cir (sir, sar), cerre (sarā), doost (dōst), hasse (hāsē), etc. etc.

The word sac (= true) occurs as tjets and as tsjets: did this simple form prove a jaw-breaker for Ketelaer?

- z was no doubt naturalised in Standard Hindustani, certainly in court circles. K. indicates it by s, rarely by z: kesmet (xizmat, xiômat, xidmat), nimaas (namāz), tierendaas (tīrandāz), dosek (duzax), soorrauri (zōrāwarī); hazaar (hazār), darāzje (darāzī), filsoos (fīlsōz = fatīlsōz), dzazia (jīzya).
- § 31. ž does not belong to the sound system of Vernacular or Prakritic Hindustani—it was an imposition from without, from Persian, reinforced by Sanskrit. K. seeks to indicate it by sj and sch, but often writes simple s: sjamidaan (šamardān), patsjayi (pātšāhī), baksnese (bakšnē se), nischān (nišān), nalasch (nāliš), zhossjali (kuš-hālī), bakus (bakšiš), sahanai (šahnāī) etc
- § 32. h: the Arabic h [h], pharyngul sound (unvoiced fricative) had fallen together with the Hindustani h (voiced glottal fricative), and this Hindustani sound is initially represented by

h: hass- (hās-), haat (hāth), hiera(hīrā), hatti (hāthī), hazash (hazār), hadjam (hajjām), hockem, -um (hukm), he (hai), etc. Medially and finally it is usually dropped: bea (byāh), ghossjalī (xuš-hālī), oeaanse (wahā-sē), nanna jutte (nanhā jutā = sandals)- chartjeraa (= xarc-ĕ-rāh), pakkertaja (pakartā hai), sja (šāh), sjay (syāhī), patsjayi (pātšāhī), loy = lou (lōhū) etc. In this matter, it is clear that K.'s pronunciation was modified by that of the outlying dialects, by perhaps Gujarati. In sahanai (šahnāī), the -h- is retained, propped a vowel on either side. Final h (hā-i-muxtafī of Persian) is at times shown: salselah (silsils), hakmah (hakmah), faidah (fā'ida), etc.

The loss of h in the middle of a word, with attendant modification of a preceding a, has been noted before (§ 16).

- § 33. '= the Arabic sound of 'ayn (voiced laryngal fricative —voiced form of h [h]) seems to have been ignored, as now: pronunciation of 'in Hindustani is found as an affectation among the educated classes. K. does not seek to indicate it in malum (ma'lim), dua (du'ā), and in words like taneta (tā'at), taalima (ta'lim), memaar (mima'r), madzmaa (majma'), saata (sā'at), the aa obviously indicates a long ā sound. (The final -a in the above-indicated Arabic words is to be noted).
- § 34. A final-t and -p occasionally figure as -d and -b, following German and Dutch pronunciation of final voiced consonants as unvoiced: bod (but), gied (git), handse for hantse (= hāth sē), keamed (kiyāmat), boed (bhūt), baab (bāp). Conversely there occur ferriant (faryād), madet (madad), mart (mard).
- § 35. In doen- (= dhūrh) and phergte = phengte (phenkta) we have assimilation of a following consonant to a preceding nasal.
- § 36. Ketelaer frequently doubles consonants: oepper (upar) moessaffer (musāfir), brabber (barābar), telle (tale), aggi (āgē), dsjennē (janā = 'born'), hassaab (hisāb), gonna beside gona (gunāh), karringe (karenge), reddi for neddi (nadī; also found as naddī in Hindustani), passarie (pasārī), kissān (kisān), jutte (jutā), -walā (-wālā), etc.

The doubling in Hindustani is as often correctly represented as not:—dsjoemma (jummā), batthie (battī), tsitter (cittar = citra); but matsie (macchī), iset (izzat) do not show doubling.

- § 37. The above, in which words are taken both from the grammar and the vocabularies, indicates the character of the transliteration occurring in Ketelaer, with its phonetic and phonological implications. The third list of words gives some Hindustani vocables which appeared to Ketelier (as a German and Dutch speaker) to be difficult to distinguish from similar words. He appreciated the semantic value of the aspiration of stops, but his frequent inability to distinguish the aspirated and the unaspirated sounds in his transcription, which has been indicated before, might partly be due to his being more familiar with a Gujarati habit of employing the glottal stop for the aspirate. He distinguishes between bag 'garden', bagh 'tiger' and bhag! 'flee!', but writes them respectively as bargh, bhagh, bag, putting the aspirate in the wrong place in the last two words; and he gives as similar words (dhāl = 'shield'), dawl (dāl) = 'pulses', and dall (dhāl = low ground); dharie, elsewhere printed as darie (darhi) and darroe (daru).
- § 38. From his grammar, it is plain that Ketelaer does not describe the standard Hindustani language. His is a popular Lingua Franca which he seems to have first picked up at Surat, and then probably he improved his knowledge of it during his stay at Lahore, Delhi and Agra. Here, too, he could have got the best Hindustani only in the royal entourage, the local dialects (except at Delhi) being forms of patois differing considerably from Standard Hindustani. Ketelaer became familiar with some of the special grammatical forms of Hindustani, but his grammar shows he could not use them, he was largely content with the Bāzār dialect with which he managed. His knowledge of the common grammatical forms of this, too, was not very deep; and his stay at Surat did not help him to retain any correctness of his Hindustani, if he had at all acquired it in the north. At times it looks as if he

wanted to compensate his want of positive knowledge by theorising. The grammar that he could prepare is very meagre indeed, and wanting in both completeness and system. It is based rather on the haphazard notes of a busy man of the position of Ketelaer, than on a scholar's detailed and leisurely study. Local Gujarati influence from Surat is noticeable—in the treatment of the -h-in the interior of words (e.g., forms like bhen=bahin, pelle=pahilā, gher=ghar, in the use of āp- for the first personal pronoun (already noticed in the LSI., IX, p. 8), in the use of -ngā for the future 2nd and 3rd persons (see below, § 45) and in a few words which have non-Hindustani forms (e. g., ghido = gIdh).

§ 39. The Declension of the Noun in Ketelaer.

The two genders masculine and feminine are recognised, but Ketelaer ignores the feminine form of the genitive and the adjective, and he does not give anywhere the feminine forms of the verb. He notes, however, the pronominal genitives meeri, teeri, hammari, tommari(=mērī, tērī, hamārī, tumhārī) inqualifying feminine nouns, in a special paragraph under pronouns. He writes—rootie hammare, uska londi (= rōṭī hamārī, uskī laundī) etc This non-recognition of the feminine forms of the genitive, the adjective and the verb is an important characteristic of Bāzār Hindustani outside the Western Hindi area.

For the number, Ketelaer gives rightly the nominative plural form of the masculine -ā nouns (=-ē) and of feminine nouns ending in a consonant (--ē). But in other nouns he gives plural forms not found in present day Hindustani. He ignores the oblique case for -ā nouns, and his use of the oblique for the plural is peculiar. It is clear that Ketelaer wanted to reduce his Hindustani declension to a system— nouns in -ā, nouns in -1, nouns in -ū, nouns in consonants, both masculine and feminine—and merely supplied a regular set of inflexions which had some agreement merely with current forms.

Of the post-positions he notes the following:—Genitive -ka (-kā; he also once gives -ke), Dative -kon (-kō), Accusative -kon

(-kō), Ablative -se (-sē; he gives also, though not in his paradigms, other forms of it as -sem = -sē and -ssoe - -sū, sū). In his texts, he gives the locative -mē (as -me), and the dative wāstē (waste). But he does not mention the agentive -nē. This is another point showing that his Hindustani is not the standard speech.

Paradigms.

(i) beetha (-bețā).

Singular. Plural. Nom. beetha beethe. Gen. beethaka beethonka (~bētỡ kā) Dat. beethakon beethonkon (-bető kő) Acc. Voc. e beetha (-ai beța) e beethe Abl. beethase beethese.

- (ii) boedia (burhiyā): pl. nom. boedien (= burhiyē), pl. obl. boedion (burhiyő).
 - (iii) admi (ādmī). pl. nom. and obl. admion (ādmīð).
 - (iv) beethi (betī) pl. nom. and obl. beetia (betiā = betīā?).
- (v) aandhoe (firu 'juvencus'), pl. nom. and obl. aandoeon (=firuo).
 - (vi) dsjoeroe (jōru), pl. nom. and obl. dsjoeroeon (jōrūð).
 - (vii) baab (bap), pl. nom. and obl. baabé (= bape?)
 - (viii) ank (akh), pl. nom. and obl. anké (= akhe).
 - § 40. The Pronouns

Ketelaer notes the difference in number between me and ham (mai-ham), and toe and tom (tu-tum): Gujarati and Marathi which he had occasion to know at Surat, evidently helped him to find out this distinction in Hindustani (Gujarati nom. sg. hū, obl. sg. mē, pl. amē: Marathi mī-āmhī). Elsewhere (p. 463) he has remarked on the use of ham—hammare and tom—tommare for the is singular also. The LSI, has noted that apre for the first person due to Gujarati influence: Gujarati gen. pl. is apado, apano—and the r in apre is probably the result of an attempt to represent the -d- (marathi marathi marathi

First Person.

Second Person.

N. me-ham toe (tu)—tom (tum)

G. meere (mērā)—apre (= apne) teere (terā)—tommare

D. mukon (mőkő)—ham kon teerekon (terekő)—tomkon

Ac. meera—hammare teera—tommare

Voc. e me-e ham e toe-e tom

Ab. mese—hamse. toese—tomse.

In addition he brings in mujhe and tujhe (misjæ, toesjæ) later under the Verb.

The third Personal Pronoun is given as nom. sg. who (= woh), plural nom. and obl. inne (= in). The oblique sg. form are given as isseka, issekon, accusative whe, ablative isse.

The Interrogative Pronoun is thus illustrated:

kon he (kaun hai), kon heoeder (kaun hai udhar), kon dourte, bolte (kaun daurta bölta), kja ghabber (kya xabar), kja tsjeyte (kya cahta?), kjon ney (kyő nahl), kiswaste, kjon (kyő), kitte (= kitta).

The Relative and other pronouns are omitted. The feminine forms meeri, teeri, hammari, tommari are illustrated.

- § 41. The Pronoun is followed by a note on the negative particles na, mat, ney; and illustrations of the use of mat are given, like mat dejauw (mat jāô) and give mat (girê mat).
- § 42. We have then a paragraph illustrating by examples the formation of abstract substantives in ie (-I), e.g. ghoeb—ghoebje (zub—zubi), alla—allahie (allāh—allāhi), andeer—andeerie (andher—andheri), etc.
- § 43. Comparison of adjectives is next taken up: kalla—issoe kalla (kala—isso kalla) and sabsoe kalla (sab-sõ for sab-se kala), karwa—issoe karwa—sabsoe kerwa (karua, karwa), etc.
- § 44. Word-formation is illustrated once again, the affixes and dar and ar (gonna—gennagaar, dajimien—dajimidaar = zamīn zamīdār, sonna—sonnaar = sēnār etc.), the

affixes -cī, wālā (toop—tooptsie = tōp, tōpcī, karnai—karnaitsjie, lackri—lackriewalla etc.) being given. Tierendas (tīr-andāz) and deggedas for deggebas (dagā-bāz) are wrongly explained as showing an affix dass (=*dāz). The feminine-forming affix -en (=-an) is noted, as in dhooben, malen, mootsjen (dhōban, mālan, mōcan).

Next, Ketelaer seeks to explain the suffix of endearment -jī, which he gives as dsjieve = jīw: he thinks,—from baab dsjieve, saheb dsjieve, maa or bhen or bibi dsjieve (bāp, sāhib, mā, bahan, biwī,+jī), that beetha dsjieve, beeti dsjieve (= beṭā-jī, bēṭī-jī) are allowed in addressing, in the sense of 'dear son, dear daughter'.

The employ of the word fallam (fulan) is explained, and then comes a further note on comparison, with two sentences—admi gorasoe ghoobha (admi ghōrā-se xub hai and hāthī bhelse barrahe (hāthī bail se barā hai).

§ 45. The rest of the grammar is taken up with Conjugation (pp. 466-485). Ketelaer's treatment of the verb makes it quite clear that his Hindustani is the 'ungrammatical' bazar dialect. The feminine forms of the verbs are unknown to him, and he gives no hint about the passive construction of the past tense of the transitive verb. The three persons have only one form. in both the singular and the plural. One interesting point is that in the future the form for the first person singular is extended to the second and third persons, and the nasal from the first person singular infects the other persons and number. In the basar Hindustani of Bombay and of Gujarat towns, one hears ham jāchgā, wǒh jāchgā, we log karēhgā, sēļhil kal āchgā etc. A similar usage is seen to characterise Ketelaer's Hindustani; and the form without the -n- and that with the -n- Ketelaer through mistake differentiates as being two types of the future (e.g. in giving the paradigms for root kar, he gives first, as Futurum, singular me, toe, whe karonga, plural ham, tom, inne karonge, and then, as Futurum Secundum, singular me, toe, whe karrega, plural ham, tom, inne karrige).

Some of his paradigms are given below:

(a) Substantive verb he:

Present, sg. me, toe, whe he, pl. ham, tom, inne hoe (i. c. hai, hū).

Imperfect, sg. hoea, pl. hoeé (hūā, hūē).

Perfect, sg. hoeétha, pl. hoeéthe (hüethā, for hūā thā, and hūē the).

Pluperfect, sg. hougea, pl. hougee (hō gayā, hō gayê).

Future, sg. hunga. pl. hunge (hunga, pl. hunga).

Second Future, sg hoónga, pl. hoónge (= hōwungā, hōwungā). Imperative, sg. toe ro, pl. tom ree (rah, raho).

Infinitive, hoea, hoeé (hūā, hūē).

(b) Root kar.

Present, kartæ, pl. kartē (kartā, kartē).

Imperfect, kartatha, pl. kartethe (kartā thā, karte thē).

Perfect, kartsjocke, pl. kartsjocke (kar cukā, kar cukē).

Second Perfect, kia, pl. kie (kīā, kīe: active construction).

Pluperfect, kiathā, pl. kiethé.

Future, karonga, pl. karonge (= honorific?).

Second Future, karrega, pl. karrige.

Imperative, toe karro, tom karre.

Infinitive, karre, karne.

Roots kgha- (khā), pie (pī), gau (gāw = gā 'to sing '), has-(hās), are similarly conjugated. There are some inaccuracies, and discrepancies. A further number of verbs—some 50—follow, with some of the tenses indicated. The Passive Verb comes next: the following instances will indicate the treatment:

Singular, misjæ sichte, toesjæ sichte, ikkon sichte, plural hamkon sichte, tomkon sichte, innekom sichte (mujhē, tujhē, ēkkō, hamkō, tumkō, inkō sikhta for sikhātā) = I am taught, thou art taught etc.

So, misjæ poslaute (= mujhē phuslāwtā, phuslātā)= I am deceived; toesjæ galli deete (= tujhē gāli dētā)= you are abused;

etc. The proper passive apparently is not known or understood by the author.

Other forms (e. g. Causatives, Compound Verbs' etc.) are not treated. The conjugation—and the grammar—ends with illustration of a compound tense—the future conjunctive, as it is called—of some verbs in the three persons and both numbers: e.g. sjad or tab me sichaya horse (= 'postquam doctus fuero', jad or tab mai sikhāyā huā), sjad toe moese hoese (= jad tu muā huā), sjad whe hadjam kar hoese (jad woh hajām kar [for kīā] huā—'postquam tonsus fuerit'), sjad tom bea karre huā (= 'postquam matrimonio juncti fueritis' = jad tum byāh-kīe hue), etc.

§ 46. Hindustani texts in the shape of translations of the Ten Commandments, the Creed, and the Lord's Prayer which come next complete the grammar. The translations are devoid of any merit, and are specimens of what was later derided in India as missionary vernacular.' It is a pioneer's work, and is therefore often difficult to follow, at times even unintelligible. The ordinal forms of the numerals are found in the Ten Commandments:

pelle hockum (= pahilā hukm), dusra, tisra, tsjoute, paansme, tsjæme, saatme, aathme, noovme and desme. The Lord's Payer has already been given in the LSI.; here I quote one of the commandments: tom koy bod(=but) oor usse brabber mat benauw, sjon(=jyō) asmaan me oepper he, oor nietsje (= nīce), sjimien me = zamīn mē) he, oor sjimien-mē telle (= zamīn-kē talē) he, oor panime sjimien me nietsje he (= zamīn-kē nīcē hai), tom inneka (= inkā) aggi (= āgē) issed (= izzat) mat karro, oor inne (inhē) gesmet (= zizmat, xidmat) mat karro; waste, me saheb tommara alla he (= is wāstē, ki maī sāhib aur tumhārā allāh hū), we jo gonna ginte baab ka usse beeta kon (= wa jō gunāh gintā, bāp-kā usse bēṭā-ko), tisre oor tsjoute kabila, we gonne karte, oor delassa kar, hazaar se, we jo ham peaar karte oor meera firmaas rakte (= rakhtā).

§ 47. It would appear that the vocabularies are in some respects more useful than the grammar. Despite a number of misprints—and it must be said, to the credit of the editor and the

we get from them a faithful enough picture of the nature of the elements of spoken Hindustam of two hundred years ago—its Sprachgut. It is already fairly highly Persianised, but a good many old Hindi words still are in common use. Some of these latter have become obsolete now; others, including the foreign Persian and Perso-Arabic vocables, have slightly altered their meanings. These vocabularies are well worth a special study.

§ 4° . Inspite of some inevitable errors of omission and commission, Ketelaer's Hindustani grammar throws a good sidelight on popular Hindustani of the early part of the 18th century, when we have a speech which, inspite of a few archaisms which are to be expected quite naturally, is in singular agreement with the typical $b\bar{a}z\bar{a}r$ Hindustani as current as a Koinz or Verkehr. sprache at the present day in all the towns of North India, and in most of the towns of the South.

[Note. The above paper was written in March 1931. In October 1932 I received a communication from Dr. J. Ph. Vogel of the Kern Institute, Leyden, Holland, in which he very kindly gave me some particular about Ketelaer's Grammar. The original was written by Ketelaer in Dutch, when he was in India. A Ms. copy of Ketelaer's original Dutch work is preserved in the State Record Office at the Hague, Holland. This copy was made by a clerk at Lucknow in 1693. The title of the document is:

Instructive oft onderwijsinge der Hindoustanse en Persicanse talen, nevens hare declinatie en conjugatic, alsmede vergeleijkinge, der hindoustanse med de hollandse maat en gewighten mitsgaders beduydingh eeniger moorse namen etc. Door Joan Joan Josus Ketelaar, Elbiyensem. En gecopieert door Isaaq van der Hoeve, van Uytreght. Tot Leckenauw. Ao. 1698.

(Instruction or Teaching of the Hindustani and Persian Languages, also their declension and conjugation, together with a comparison of the Hindustani measures and weights with the Dutch, moreover the meaning of some Moorish names etc. By John Joshua Ketelaar of Elbing [a town on the Baltic, not far from Dantzig, where K. evidently was born]. Copied by Isaac van der Hoeve of Utrecht. At Lucknow, A. D. 1698).

It is quite clear that the grammar was written before 1698, —at the end of the 17th century.

Dr. Vogel thinks that Millius, who was professor of ancient languages in the University of Utrecht, translated the work from Dutch into Latin. The original Dutch work has never been published. (S. K. C. 10 October 1934).

MATERIALS FOR A SKETCH OF TULU PHONOLOGY

BY

L. V. Ramaswamy Aiyar M. A., B. L., (Maharaja's College, Ernakulam)

GENERAL

Tulu or Tuluva 1bhasa (as it is called by native speakers) is a Dravidian dialect spoken by nearly half a million people inhabiting the central portion of the district of South Canara in the Madras Presidency, between the river Kalyanapuri and Chandragiri. The area where Tulu is spoken is bounded on the north and the east by Kannada regions, while to the south lies the Malayalam-speaking district of Malabar. Within the Tuluspeaking area, the Indo-Aryan dialect Konkani and the cultivated Drrvidian speech Kannada are spoken by a not inconsiderable element of the population. As Tulu is not a written dialect, the official language of the localities is Kannada. Though the influence of Indo-Aryan on the one hand and of the Dravidian speech Kannada on the other, has led to the borrowing by Tulu of a fairly large number of words from these speeches, the Tuluva bhâsa has kept up its dialectal individuality in a remar kab measure in the spheres of Phonology and Grammar.

The people who speak this dialect belong to different castes and communities, but the non-Brahmin Bants among them appear to keep up even to-day the social traditions of the Tuluva people as exemplified by the Aliya-Santana system of matriarchy still prevalent amongst them. The Brahmins, however, form to-day the chief custodians of Indo-Aryan culture. Udupi, the centre

⁽¹⁾ The term [tulüve] possesses a meaning "soft" in expressions like (tulüve gujjzæ) soft jack-fruit. Whether indeed there is any connection between this word and the name of the people, one cannot say.

of Tuluva culture, is the seat of eight important religious mathas where Brahminical learning is fostered. The religious zeal of the Tuluva Brahmins had from a very early period brought them in contact with the Nambûdiri Brahmins of Malabar. It is a very remarkable fact that the Tuluva Brahmins have from an early time commanded respect throughout the Malabar country as being fitter to perform the function of the temple priest than any other group of non Malavali Brahmins. From the point of view of spiritual eminence, the Malayalis have accorded to the Tuluva Brahmins very much the same recognition and homage that they have been according to the native Nambûdiri Brahmins of Malabar. Cf. in this connection the terms embiran 'my spiritual lord' and pôt't'i 'worthy of praise' 'the praised one', names by which the Tulu Brahmin settlers in Malabar are called by the Malavalis. As I have said, this apparently has been a direct result of the cultural intercourse that has existed from an early time between the Brahmins of Malabar and of Tuluva nâdu.

The Tuluvas appear to belong to an ancient stock of people as their name is referred to in the ancient Tamil¹ classics. History tells us that they may once have been the subjects of Sâtîyaputra. Notwithstanding this fact, the Tuluvas have not cultivated their language as a literary dialect. Apart from a few Pauranic and Sanskritic legends and religious songs preserved on palm-leaves in the Brahmin families and also folk-songs current among non-Brahmin Tuluvas, there exist no records (literary or inscriptional) of the past condition of this dialect. The Paurânic legends and songs do not seem to be very ancient; yet they are useful to us in elucidating a few dialectal variations, and also the peculiar changes undergone by Tulu borrowings from Sanskrit

pâgalârkai-p-paraikkat-pîli-t tôgai-k-kâvit'-t'rulunâd-anna

⁽¹⁾ Cf. the verse in Aganantru, one of the oldest of extant Tamil classics:

[&]quot;The Tuluva country famed for its arbours filled with peacocks feeding on the pagal fruits."

(and probably Prakrit also which at one time was current in South India). So far as the folk-songs are concerned, they are invaluable to the student of the history of the Tulu language, as they preserve some very old forms of Tulu words.

Valuable material regarding the grammatical and glossarial features of the present-day condition of the dialect has been collected by the Mangalore missionaries whose unique pioneer zeal in the exploration of the languages of these parts deserves to be recognised with gratitude. A Tulu translation of the New Testament (1859), a grammar containing the outlines of morphology and syntax (1872), and a Dictionary which is fairly exhaustive (1886) are some of their publications which furnish the student with rich linguistic data. These works, however, were all written several decades ago, and were primarily aimed at imparting to missionaries a working knowledge of the language. To the modern linguistician interested in details and minute dialectal variations, they are inadequate. Particularly in Phonology and in Grammar where the dialectal differences vary on a communal as well as a regional basis, the modern linguistician has to depend on his own independent investigations for the requisite information.

As the dialects of the Madras Presidency did not fall directly within the scope of the Linguistic Survey of India, Tulu was omitted from the list of Dravidian dialects described in the Fourth Volume of this series.

The present writer whose interest in Dravidic studies led him to the study of Tulu also, happened to spend some time in the Tulu-speaking talukas of South Canara, and he utilised his visit to observe the phonetic and the morphological peculiarities of some of the sub-dialects of Tulu. He has subsequently also been able to verify his observations carefully by comparing them with the views of Tuluvas resident in the Cochin State. He has embodied all these observations of his in the following sketch.

The alphabet originally employed by Tuluva Brahmins in writing out the legends on palm-leaves was a modification of the

Malayalam script. The reason for this preference was apparently the intercourse that existed between the Tuluvas and the Malayalis from an early period. The Mangalore missionaries, on the other hand, printed their Tulu works in the Kannada script, and this was probably more in the fitness of things, in view of the close proximity of the Kannada speaking areas to Tuluva nadu and of the large influence exercised by the former on Tulu, particularly in vocabulary.

TULU PHONETICS.

The symbols employed in this sketch for the representation of Tulu sounds are adapted from the notation of the International Phonetic Association. They are mostly the same as those which the present writer has used in his "Brief Account of Malayalam Phonetics."

Tabular representation of Tulu Sounds. VOWELS.

		[ဨ]	[a]	[8]	[\$]	[i]	[\$]		[h], [fd],

The number of "phonemes" in Tulu is thirty only, these being represented in this sketch by the following I. P. A. symbols: [p], [b], [t], [d], [t], [d], [k], [g], [c], [p], [m], [n], [p]. [l], [l], [r], [o], [s], [s], [s], [i], [f]-[i], [e], [æ], [a:], [o], [u], [m], [A].

Owing to the large influence exercised by Sanskrit on Tulu lexicology, Tulu borrowings from Sanskrit show also the aspirate consonants. It may be noted here that, while the proportion of Sanskrit words in the dialect of the Tuluva Brahmins is exceedingly high, the number of Indo-Āryan adaptations in the common people's dialect is also not negligible.

There occur in Tulu a number of other sounds also which can only be described as "phones" or speech-sounds, belonging as they do to one or other of the above phonemes. The most prominent among these are the following:—

The contexts in which these occur are alluded to below in connection with the description of the phonemes themselves.

The phonation of **Tulu** sounds, generally speaking, shares many common features of south Dravidian enunciation. In the present sketch I shall point out only the unique peculiarities of **Tulu** while, for information about the common features, I would refer the reader to my "Brief Account of Malayalam Phonetics."

1. [p] This bilabial surd occurs initially and intervocally in Tulu words:—['pudæ] dove; ['po:di-] or ['po:di-] to fear; 'Adepu] closing.

Intervocally, the short sound is quite stable and pure particularly in secondary or derivative positions; contrast with this the intervocal enunciation of Tamil surds which become voiced mediae.

Tulu [p] involves no aspiration normally, but its phonation is accompanied by greater muscular tension than in Tamil or in Malayalam.

- 2. [b]—In initial positions this plosive is devocalised a little, but it can never be mistaken for [p]. Intervocally [b] does occur in Tulu in a stable form. ['bAnjzi] belly; [bAr-] to come; ['Adəbæ] adulteress; ['ubi-] to swell.
- 3. [t] This is an interdental surd, in the production of which sometimes the tip of the tongue may be spread not only over the teeth but over the teeth-ridge also.

Tulu lacks the alveolar plosives [t] and [d] of Tamil-Malayâlam. The voiced alveolar [d] in the Tamil consonant group [ndr] and in Malayâlam [nd] is produced with the tip of the tongue on the fore-gums while the voiceless alveolar [tt] of Malayâlam is produced farther backward in or immediately behind the region of the back-gums.

Historically, Tulu has changed the old alveolar group [ndr] to [njz]:—

4. [d] This sound occurs initially in native words:—['daver-] to become loose); ['dall-] to beat.

Compare Kannada and Telugu.

Medially, [d] in Tulu may in some cases be the result of secondary changes peculiar to this dialect. (Vide Phonology below).

5. [t], [d]: These are genuine cacuminals produced with the tip of the tongue on the dome of the palate.

They are not found initially in native Dravidian words.

The consonant group [nt] in Tulu, like the consonant groups [nc]], nt], [nk] and like intervocal surds in derivative positions in this dialect, is quite stable, unlike in Tamil.

- 6. [k]: The phonation of this velar plosive calls for no remarks, except that when compared with Tamil [k], the muscular tension is greater and that the sound shows less tendency to become weakened intervocally than in Tamil.
- [k] in connection with front vowels becomes slightly "frontalised" in its point of articulation though it never reaches the position of the palatal plosive [c], e.g. ['Adi-ik'ei] palm of the hand; ['k'inni] small; ['Akk'i] rice.
- 7. [g]: The voiced velar plosive can occur initially in native words, e.g., ['ga:vü] heat; ['guļi] or ['guri] pit; ['ga:nü-] to glow.

Though not unstable in modern enunciation intervocally, a few instances illustrate the older process of "weakening" e.g.; [ugərui] beside [ubərui], [ubərui], brackishness.

A frontalised [g'] in connection with front vowels is found in words like the following:—[mAg'æ] son; $[g'i:r\ddot{u}]$ to scratch.

[c]], [jz]: These are affricates as in the other south Dravidian speeches, the plosive element being partially present in the initial contact, and the fricative element in the immediately following continuant sound.

These affricates in Tulu are produced at a slightly more forward position than in Malayalam or Tamil, especially when they are in contact with front vowels.

Compare the phonation for instance of Tulu ['cʃu:du'] heat and [c͡ʃikkæ] dwarf.

[jz] occurs initially in native words e.g, ['jzadər-] alternating with [c]adər-] to be dispersed; ['jza:r-] to slide; ['jziras] small; ['jzo:ou] child.

[m] calls for no remarks.

10. [n]: This is an alveolar produced at the fore-gums in connection with front vowels and at the back-gums in connection with back vowels.

It is distinct as a phoneme from [n].

In connection with dental plosives it becomes dental, involving as its production does the spreading of the fore blade, e.g. ['pond] to rise; ['unt-] to stand up.

It may be interesting to note that while the dental nasal occurs in Malayalam initially and medially, Tulu (like modern Tam; Kann, and Tel.) posseses [n] only in the consonant groups mentioned above.

11. [n]: A "palatal" nasal produced at about the same position on the mouth-roof as for [c] and [jz]

Besides being a common sound in the consonant groups $[\widehat{pci}]$ and $[\widehat{pjz}]$, it occurs initially in a very few native words e.g. $[\widehat{parkw}]$ alternating dialectally with $[\widehat{narkw}]$ bark, rind.

12. [n] This cacuminal masal characteristic of DraviJian is being displaced by the alveolar [n] in the common dialect of Tulu; nevertheless, it is conspicuous in the speeches of certain areas and communities:—

['mennu] spark, [mennu].

['kannm] eye, ['ponnm] or ['ponnm] girl.

As in other Dravidian dialects [n] does not occur in initial positions of Tulu words.

- 13. [ŋ]: This velar nasal never occurs in its short form, nor is it found initially. It is found in the consonant groups [ŋk] and [ŋg]. In the adaptations ['Annəna] courtyard and ['kʌnnənæ] plate, [ŋŋ] stands for Skt. [ŋg]. Cf. also ['ʌnnənnolu] limbs, a native plural of Skt. ['ʌnŋʌ].
- 14. [1]: The alveolar lateral when in connection with front vowels is produced at the fore-gums while the articulation is slightly more backward i. e. near the back-gums, when influenced by neighbouring back vowels.

- [1] does occur in Anlaut-positions of Tulu native words as the result of Accent-shift and Aphesis, e.g., ['lamb'] to wash beside ['A,lemb-]; ['lepp-] beside ['vo,lepp-] to call, etc.
- 15. []: The individuality of this characteristic Dravidian cacuminal is conspicuous still in Tulu, though the colloquial favours a tendency to decerebralise the sound: ['alev-] to measure; '(a:lu) person ('kalla) deceitful; ('ba:lu) sword.
- 16. [r]: The points of articulation vary slightly with different speakers. It is only post-dental (i. e. articulated at the edge of the upper row of teeth) in some instances, while it is fully alveolar in others. The most forward limit is the teethedge and the most backward is the region of the back-gums. The rolled or trilled r of Tamil and Malayalam is not found in Tulu. Historically, it had undergone peculiar modifications.
- 17. [v]: Initially, the current bilabial fricative of the common variety of modern Tulu is developed from an original non-syllabic [ŭ] occurring initially before dorsal vowels of native words. The representative of initial [v] of Tamil, Telugu, Kûi and Malayâlam is [b] in Tulu, as in the other b- dialects of Dravidian viz., Kannada, Brâhûì and Kurukh. Tulu [v] involves a slightly greater activity of the lips than Tamil or Malayalam [v].

Some speakers (probably influenced by the enunciation of Indo-Aryan] give a labiodental value to this sound especially in Sanskrit words.

Medially, [v] occurs in radical and derivative positions:—
['a:valu] yawning; ['kA]væ] theft [c]eluvæ] handsome.

18. [s]—The interdental sibilant is a very conspicuous development in native Tuļu words. It is found both initially and medially:—[su:] to see; [sui] eddy; [pasi] boy, child.

Note that Tamil and Malayajam do not generally possess [s] in native words.

The voiced variety [z] does not exist in Tulu or in any other Dravidian dialect for that matter.

- 19. [3]: This sound is produced in Tulu with the tip of the tongue forming a slight hole-like passage somewhere on the alveolar region. The fricative element in the affricate [6]] of Tulu is produced at a slightly more backward position.
- [5] in Tulu is found in initial positions as a variant of [t] and alternating with [s]:—[5ird-] to correct, beside [tird]; [5i] sweetness, beside [ti:].

For the inter-relationships of these sounds, see Phonology below. Medially [\forall] is very rare in native words, the sound having changed to [s] in this position as regularly as in Kannada.

20. [fi]: The glottal fricative is a conspicuous secondary development in native words of certain communal dialects of Tulu: [finderum] lamp; [find.] to die; [findæ] river.

For the circumstances in which the glottal fricative has cropped up in Tulu, see Phonology below.

Ordinarily the sound is partially voiced, but the **Tuluva** Brahmins give the voiceless value to the sound in Sanskrit tatsamas and tadbhavas. Medially, a voiced [fi] appears only in borrowings from Kannada, like [Arifu] knowledge.

Vowels.

21. [i]: The phonation is the same as in other south Dravidian speeches. When followed in the next syllable by short consonants and open vowels, [i] changes to [a] or [e]:—[idæ] place, beside [edæ]; [ilæ] leaf, beside [elæ].

In unaccented positions, a centralised variety of this sound occurs; this is symbolised in this paper by [i]:—[kudikee] fox; [madipu] folding.

22. [e]: In unaccented positions, [e] changes to [e], and in some instances where the character of [e] is distinctly marked off, to [ë]. Finally, a more open [e] is also found.

23. [30]: This sound occurs in final positions of nouns which in Tamil have terminal [Ai] or [31] and in Kannada [6], e. g. [ba:]30] plantain; [mArse] screen.

It is also found as a colloquial variant of [A] or [a:] in connection with the palatal [n], [c]] and [jz]:—[æjzæ] footprint; [c]æder-] to disperse; [c]æ:ræ] coconut palm; [nærk-] to slice.

- 24. [a:]: This, as in other Dravidian speeches, is the value of the long \hat{a} sound.
- 25. [o]: [o] in Tulu is not always so close as in Malayalam or in Tamil. In the speeches of the common masses, I have heard the value of [o] being given to this sound by some speakers e.g. in [bolir-] to become pale; [bold-] to wish; [bokka] and.

In unaccented positions, a centralised variety [ö] appears with less lip-rounding, e. g. [dinödu] in a day; [maröku] to the tree etc.

Normal [o] of Tulu alternates in some speech-varieties with another sound which is allied to [e] and characterised by lip-sounding, in words which in other south Dr. dialects have [e]:—[ponnu] beside colloquial [pønnu]; [po:di-] to fear, colloquial [pø:di]. cf. Tam. [pen] girl and Mal. [pe:di] fear.

26. [u]: Lip-rounding is very conspicuous.

An original glide $[\bar{u}]$ before initial [u] of native words has now developed into [v] in some speech-varieties.

In unaccented positions [u] may frequently appear with a centralised value [ü]: - [kAdü-va:ji] a kind of fish; [ku:dükəttm] association; [kAdüpa] excessive.

[u] changes to [o] in the same circumstances in which [i] changes to [e] mentioned above:—[onengelum] dry, beside [unengelum]; [todas] thigh, beside [tudas].

- 27. [w] This is a close, back sound somewhat similar to [u] but without lip-rounding. cf. Tamil [w]. This sound (replaced sometimes by [u], see 'Phonology') occurs as an enunciative of Tulu words after final consonants. It is noteworthy that it is found not only after some terminal plosives and fricatives but also invariably after [l], [n], [r] [i], [n], [m] and [j], while in literary Tamil and Malayalam the enunciative need appear only optionally after the last-mentioned sounds. [e:dw] sheep [pa:lw] division; [ka:rw] leg; [e:lw] seven [a:nw] boy; [mi:nw] fish.
- [m] in Tulu is also found in declensional endings and conjugational terminations. (see below). The dative ending [km] or [gm], Acc. [nm], Loc. [dm] etc. appear only with final [m] unless influenced by a back vowel in the stem, in which case [u] appears instead of [m]. cf. [pu:ku] to the flower and [Ammagm] to the mother. Among the conjugational forms, the endings of the past participle, the perfect participle, the third person imperative etc. show [m] or [u] according to this rule.
- 28. [A]: This is the short a-sound of Dravidian: Medially in unaccented positions it changes to [a] e. g., [biralu] finger; ['Adapu] closing, etc.
- [A] in final positions becomes slightly more open and probably a little "frontalised." This value is represented in this essay by [a]
- [A] sometimes alternates with [a] or even [e] after the voiced plosives, affricates and fricatives: [jzʌdɨ-] [jzedɨ-] tor am; [cjaræ], cjeræ] head; [dʌn̩tæ], [denṭæ] stick.
- [A] changes in certain varieties to [o] or [o] under the influence of neighbouring bilabials:— ['tappu], 'toppu], ['soppu] mistake; ['par-pü-] beside [por-pü-] to pluck.

Phones.

Consonants:—[r]—This is the value of [r] when in contact with the retroflex sounds. As it is not a "significant" sound in Tulu, it may be considered to be member of the [r] phoneme.

For [n] and [n] and [l] the dental varieties of [n] and [1], see above under the remarks for the latter.

Vowels: A number of these have already been referred to above. Apart from these, I have noted an open mixed obscure [v] in the Gerundial Infinitives of Tulu - [pAnjwræ] for speaking [tinjvræ] for eating, etc. This [v] also crops up in the rapid utterance of final [ä] in connected sentences.

Diphthongs.

The following falling diphthongs are current in **Tulu** in rapid enunciation. Deliberate utterance may lead to the disappearance of the diphthongal value:—

[Ai], [ei], - ['kAi] hand; [mAi] body.

[a:i] — ['ka:i fruit

[Au] — ['Au]u] there; [Auŋkü-[to press].

[oi] — ['koi] to reap; [oilü-] to reel.

Consonant Groups.

- 1. The native consonant groups (apart of course from long consonants), found in other Dr. speeches, occur in Tuju also:—
- (a) Nasals and plosives: [ŋk], [ŋg], [pc], [pz]' [nt] [nd] [nt], [nd], [mb]—For illustrations see below under "Phonology"
- (b] [l], [l] [r], [n] and consonants: [nilk-] to peep, stand on tip-toe; [mulpu] here; [tird-] to mend; [tirkæ] settlement; [ta:lmæ] patience; [unkëlu] night-meal; [panp-] to speak, etc.
- 2. Apart from these, there occur in Tulu certain consonant groups like the following, consequent on the disappearance (in

rapid colloquial enunciation) of an intermediate vowel: [cjadpu] leanness; [Adgæ] near; [cjigrul] sprout; [nesrul] morning [paspu] tender, etc. [odka] end, broken; [kadtelul] what is broken.

Dialectology.

The sub-dialectal varieties of Tulu appear to have both a communal and a regional basis. Of the regional divergences I have not been able to make a proper study yet. The communal variations are all interesting and significant; but among them all the widest cleavage is met with between the sub-dialect of the Tuluva Brahmins and the speech-variety current amongst the most prominent community of Tulu nâdu, viz. the Bants who are cultivators and non-Brahmins. I am told that there are some divergences (of a less significant character, however) between the dialect of the Bants on the one hand, and that current among other non-Brahmin communities like the [mansé] or a class of Holeyas and the [birvæ] or toddy-drawers on the other. differences and the regional variations have yet to be investigated through a systematic linguistic survey of the entire Tuluva country. In the following sketch, I have dealt with only the variations (in Phonology, Grammar and Vocabulary) between the Brahmins' subdialect and what I describe here as the folk-speech i.e. the language employed by the Bants who form the largest community in Tulu nâdu.

Phonology.

(i) Initial [s] of the Br. dialect corresponds to [t] of the mass-dialect in instances like the following:—

Br,	Folk-dialect.
to see [su:-p-]	[tu:p-]
to appear [so:js-]	[to:jæ-]
to leak [sor-]	[tor-]
to die [sAj-]	[5Aj-] and [tAj-]

to be obtained [sik] [tik-]
to wear [sutt-] [tutt-]
underneath [sittut] [tirtut]

(ii) In a few, Br. [t] corresponds to certain regional forms of the folk-dialect [s]:—

sweetness [ti:pæ][si:pæ] or [\$i:pæ]torch [tu:tæ][su:tæ]river [tudæ][sudæ]

(iii) Initial [fi] is found in Tulu in two strata of words: (a) Borrowings from new Kannada of words with initial [fi] < older [p]; (b) [fi] in native words corresponding to initial [t]. Of these, the borrowings from Kannada are found in varying measure all over the country and amongst all communities; but [fi] or sometimes voiceless [h] corresponding to [t] and [s] is more frequent among the Jains and others in the eastern and south eastern taluks of the Tulu country.

```
[fi] words — corresponding to [s] or [t] words
to see [hu:-p-] — [su:-p], [tu:-p-]
river [hudæ] — [sudæ], [tudæ]
to appear [ho:jz-] — [so:jz-], [to:jz-]
```

(iv) Borrowings from Kannada with initial [fi] (derived in Kann. from older [p]) are preserved in the Br. dialect with the initial aspirate, generally speaking; but in the mass-dialect, the [fi] disappears.

Br. Folk-dialect ship [fiAdəgu] [Adəgu]' gold [fionnu] [onnu] adulteress [hAdəbé] [Adebé] much [fie:rəļa] [e:rəļa]

(v) Initial [jz] of the Br. dialect answers to [d] of the folk-speech in the following:

what f [jza:nes] [da:nes]
why ? [jza:jegm], [jze:gm] — [-da:jegm]
to be filled [jzipjz-] — [-dipjz-]
crab [jzepjzi] — [-depjzi]

cf. the adaptation [zeji-] to win, which preserves [zz] in the Br. dialect but appears with [d] as [deji] among certain non-Brahmins.

(vi) Br. [iddi] not, answers to folk-sp. [iffi]

(vii) the sound corresponding to the peculiar voiced continuant [4] of Tamil, Mal., old Kannadi and Badaga is in intervocal positions, [1] in the Br. speech, but [r] in the folk-dialect:

fowl [ko: ii] — [ko: ri]
pit [guli] — [guri]
to fall [bu: i] — [bu: r-]
plantain tree [ba: iæ] — [ba: ræ]

This correspondence Br. [1] - folk [r] exists only in cases where the short sound appears intervocally; when it occurs in consonant groups, it assumes the value of [r] in all sub dialects in Tulu:

Ripe fruit [pArndw], black gram [urdw], dust [burdæ], etc.—corresponding to Tam. [pA.jem], [u.jundw], [pu.judi], etc.

(viii) The retroflex [] [n] apear to be more common in the Br. dialect.

to shine [menək-] — [menk-] should be done [Ampoli] — [mAlpoli] to do [Ampuna] — [mAlpuni]

- (ix) Inter-vocal plosives in derivative and indexional positions appear more often unvoiced in the Br. dialect.
- (x) Aphæresized forms are, so far as I can see, fewer in the speech of the Brahmins than in the folk-speech.

to call [volep·[— [lepp-]
to wash [Alemb-] — [lamb] or [lumb]
left [edengul] — [dAngul] or [dAngul]
spot, stain [kAlenkul] — [lankul]

(xi) The tadbhavas from I A appear on the whole to have undergone fewer modifications in the Br. dialect.

Grammar.

- (a) Post-positional terminations.
- (1) The Act ending in the Br. dialect is (-ni-), while in the folk-speech it is (-nu-) or (-nu), the character of the enunciative

depending upon vocalic harmony with sounds of the preceding syllable in each case-

rice (Ari), (Ari ni) — (Ari-nu)
country (u:ru), (u:ru-ni) — (u:ru-nu)

(ii) The Abl. sing ending of the Br. dialect is (-ttm) or (-ttu), while the folk speech has (ddm) or (-ddu).

from the table (me:jzi-ttw) — (me:jziddw) from the garden (to:ţţö ntu) — (to:ţţəddw)

(iii) The Genitive sing, affix of the Br. dialect is (-to), (-do) when preceded by a dorsal vowel in the previous syllable, while it is (-tä), (-dä) when preceded by a front vowel in the preceding syllable; in the folk-dialect the affix is generally always (-tä). (-dä).

of tree (marö nto) — (marö dä)
of water (nirüdo) — (nirüdä)

(iv) the sing. Gen of words denoting human beings may have [-no] in the Br. dialect:

of the mother [Appano] — [Appä-da]
of the boy [ma:ni-no] — [ma:ni-dā]

(v) A nasal appears in certain post-positional terminations in the Br. dialect in words which (whether native or adaptations from IA) correspond to those which in Tam., Mal. and other speeches have a final [·m]—

at the tree [marö-nţu] — [marö-du]
of the people [jzano nto]—[jzano-dä]

[Note:—[mará] tree (a native word) and [jzana] people (1 A) correspond to [mare-m,] [jzanem] found in Tam., etc.]

The nasal has been carried over, in the Brahmins' sub-dialect, to the post-positional endings of some words like [unesu], as in [unesontu], etc., though the bases of these words cannot have had an original nasal as in [marem] etc.

- (b) Demonstratives and Interrogatives.
- (i) The aphæresized inflexional forms of [indw], [undw]:

[nekkw] to this,
[nettä] of this,
[neddw] from this,
[nettw] at this,
[ne:kulu] these

are not commonly found in the Br. dialect; on the other hand, the non-aphæresized

[undəkw] or [indəkw] to this;

[undəttä] or [indəttä] of this;

[undəttw] or [indəttw] from this;

[undətw] or [indətw] at this;

[undəkulu] or [indəkulu] these;

are met with.

(ii) The following differences are noteworthy in the Interrogatives:

Br. dialect

[jza:næ] what?

[jza:jəgw]

[jzə:jəgw]

[jzə:gw]

[jzə:gw]

[jza:la] anything — [da:jəgw]

[ojikw] what for? — [da:jəgw]

[e:rw] who? — [ja:rw]

(c) Personal Pronouns.

Br. dialect Folk-speech [e:nw] I [ja:nw]

[imbje] he (here)—[imbe] (the "oblique" forms show [imbj-] in the folk-speech)

[imbolu] she (here) — [mo:]u] [Note Aphœresis] [inkulu], [inikulu], [ni:kulu] you — [i:rut]

Honorific [me:rul] he, she (here) is found only in the folk-dialect; in the Br. speech [a:rul] or sometimes a:klu(he, she (there) does duty for both the proximate and the remote forms.

(d) Verbs.

(i) The Infinitive ends in [-nä] in the Br. dialect, while in folk-speech it may be [nä] or [-ni]:

Br. [Ampünä] to make — [malpüni]

- (ii) The third person singular neuter ending of all primary tenses except the future is [-nw] or [-nw] in the Br. dialect, while in the folk-speech it is [-ndw] or -[ndw], e.g., it speaks [panpunu] or [panpunum] [panuumdu] etc.
- (iii) the third person singular neuter ending in the negative of the Future and the Future Perfect tenses is in the Br. dialect [-anm], but [-andm] in the folk-dialect.
- (iv) The first person plural ending of all tenses has [o:] in the Br. dialect, but [-a] in the folk-speech.
- (v) One type of causatives is formed with [-a:] in the folk-speech but with [-o:] in the Br. dialect:

Br. [ampo:] to cause to make -[malpa:] etc.

(vi) Negative verb-forms show some divergences. While in the Br. dialect the infinitive of the particular tense-stem is combined with [iddi] not, and the pronominal ending, the folk dialect shows base plus [inzi-] plus pronominal ending:

[i:bArpüniddjä] thou hast not come or dost not come — folk-sp. [i.bArpinze].

[a:je battüniddje] he did not come -[a:je batti jze].

B. In the negatives of the present and sometimes in the present perfect tense the Brahmin dialect sometimes shows forms constituted of base plus [iri] plus pronominal ending.

[barpirje] he does not come.

[barpirja]ul] she does not come.

V. Certain popular negative forms show divergences:

Br. dialect Folk-speech

[bo:tri] not wanted [bo:diyzi], [bo:diccsi]

[itri] it was not [ittigei]

[a:tri] it did not become [a tiyzi] etc.

(vii) The present relative participle shows [-i] in the Br. dialect, but [-a] in the folk-speech: [bArpi]—[bArpa]

VOCABULARY.

Folk-speech.
[depp-]
[elija] (kippi occurs as a noun).
[tArko:lu]
[pAtt -}
[ett ·]
[unt-]
[ta:ra:ji]
[a:mm]
[jzo:vu] child, [poṇṇu] girl.
[j͡zi:r]
[i:jəvu]
[Attm]

[Amp], $[mAmp \cdot]$ to make [mA]p]

[manta] all [ma:ta]

I A [puruse] husband [kandəne]

I A [Atena], [a:fia:ra] food [umpu], [nuppu] [onesu], [tinesu].

[kol-p] to give [ko

[kor-p] in Bant speech, but [ta:nk-] in the speech of

the holeyas.

[laka] like [lekka]

Unique features of Tulu Phonetics.

- 1. The absence of the cacuminal [r], of the peculiar Tamil retroflex continuant [r] and of the alveolar plosives [r] and [r] found in Tamil.
- 2. The existence of [cf], [s] and [f] alternating in initial positions of native Tu]u words is a contrast to the uniformity with which one or other of these more or less uniformly occurs in the other Dravidian dialects.
- 3. The frequency of the occurrence of [s] in initial positions of native words.
- 4. The development of an initial secondary [fi] in certain communal and regional dialects.
- 5. The conspicuous development of on-glides before initial vowels of native words in certain varieties of speech:
- 6. For other unique features of Tulu, see end of the section on Phonological Correspondences.

INDO-ARYAN ADAPTATIONS.

I have already referred to the presence in Tulu of a fairly large proportion of Sanskrit words and adaptations. A good number of these words have been adapted with characteristic modifications in the parlance of the non-Brahmins also. Generally speaking, the tatsamas used to be evaluated more or less correctly

by the Brahmins till about a generation or two ago; but when the number of laukikas among the Brahmins began to increase, and Sanskrit ceased to be systematically studied by them, the modifications introduced into the popular dialects also began to be accepted by the lay element among the Brahmins.

It is possible that some among the following adaptations were made through the varieties of Prakrit current in south India in an ancient past. No attempt is made here to distinguish the two strata—Sanskritic and Prakritic. I seek only to give here a conspectus of the phonetic modifications as they appear today.

These modifications are very prominent in connection with

- (a) Sanskrit consonant groups.
- (b) Sanskrit initial [v], [s], [Jz] and [j] in certain instances.
- (c) Sanskrit aspirate consonants
- (d) Sanskrit [h] both initial and inter-vocal.
- (e) Some miscellaneous instances.

Without seeking to evolve any rules, I shall briefly give a few instances under each heading.

- (a) Sanskrit consonant groups.
- (i) Anaptyxis is found in the adaptation of Sanskrit consonant groups of which the second component is [r] and the first a plosive.

Sanskrit	Tuļu adaptations
[kiama] order	['k ərəmä]
['grhac]air] curse	[ˈgərəc͡ʃɑːrá]
['gra:ma] village	['gərəma]
['grhasta] householder	['gerəttas],['gerəstas] or [gəresta]
[,pra'jatna] labour	[pe'rəstənä]

(ii) In the following instead of swarabhakti we find that [r] is dropped: ['dr [ti] sight, [ditti]; [']rnga:ra] beauty, ['inga:ra]; ['mrga] animal, [miga].

(iii) Sanskrit consonant groups in which the first component is [v] have lost this [v] in the following: ['vṛnda:vʌnʌ] Brindavana, ['runda:ræ] or ['runda:vʌnæ]; [vjʌrthʌ] futile, ['jertä] or [jertæ].

In the following instances, [v] which is the second member of the groups has disappeared: ['dvi:pa] island, ['di:pr], ['dfivani] sound, ['dani]; ['dva:ra] door, [do:ra]; ['jzwal] to glow, ['jzali-[

(iv) The Skt. group [vj] loses its [j] element in the following: ['vjArthA] futility, ['vertä]

['vja:jzjA] accusation, ['vejzjä]
[,vjA'tja:sA] difference, ['vetja:sä]
['vja:,pa:rA] trade, ['be:,pa:rä] or ['be:rä]

(v) Among the other Sanskrit consonant groups, the treatment of the following is interesting:

['kaṣṭa] trouble, [kaṭṭa] - ['sthiti] situation, '[titi] or ['c̄]ti]
['Ṣaṣṭhi] a 'tithi', ['Ṣaṭṭi - [sthala] place, ['tala]
['duṣṭa] wicked, [duṭṭa] -- ['jzpā:paka] recollection,
['jza:pəka] or ['naːpəga].

- (b) Certain Sanskrit initial consonants.
- (i) [v]: Tulu has not preserved or tolerated [v] initially as Tamil, Tel. or Kûi. it has [b] in the place of this [v] or it has dropped it altogether. The modern [v] of some varieties of Tulu is from [ū]. This intolerance of initial [v] probably accounts for the following:—

['vajzra] diamond, ['ojzira]; ['varsa] winter, ['orsa] ['varjz.] to cast off, ['orjzu]; [vi bhu:ti] secred ashes, [,i'bhu:ti]; ['varna] colour, ['orna] or ['bann.]; ['vista:ra] extent, ['ista:ra], ['vakra] perverse, ['bokra]; ['vi:na:] musical instrument, ['i:na.]

(ii) [s] appears as [t] in the following:—
['sAndfig:] evening, ['tAnjza]; ['svara] sound, [tora]
['sAncfi] bag, [tAncfi]; [so:ma] [to:ma];
['jukra], ['tokra]

- (iii) [d] appears as [jz] in the following:—
 ['da:k\inja] benevolence, ['jza:k\injä; ['vajdja], ['bajzä];
 ['danta] tooth, [jzantä]—
- (iv) Skt. [j] as Tulu [jz]: [jantra] machine, [jzanträ]; ['jatna] effort, [jzatna]; ['jauvana] youth, [jzavəna]
- (c) Sanskrit Aspirate consonants.

The Tulu Brahmins usually give correct values to Skt. aspirate consonants. The carefulness with which the aspirate is incorporated by them has resulted in the conversion of certain initial non-aspirate surds of native words into corresponding aspirates:— ['cfali] cold, ['cffali; ['bandi] cart, ['bfandi]; ['taṇṇgā] ladle, ['thaṇga].

But in the dialect of the common people, Sanskrit aspirates lose their aspiration completely: ['gandfia] smell, ['gandfia]; ['garbfia] pregnancy, [garbfia]; [a'sa:dfija] not possible ['asa:djä]; ['kaṭhina] hard, ['kaṭina];

(d) Sanskrit initial and medial [h] or [h].

Though modern Tulu shows a stable [fi] in certain contexts, the older treatment of Sanskrit [h] reflects the general tendency of parent Dravidian to avoid [h]:— ['AfiA,mAti] egotistic audacity, ['Ambotm] or ['Amottm]; ['AfiAn,ka:rA] selfishness, [aliga:ra]; ['alfia:rA] food, ['alria]; ['bAfiAlA] many, ['ba:la]

- (e) Other peculiarities.
- (i) Metathesis is observable in ['attessä] from Skt ['attatha] [arkama] from Skt. [akrama].
- (ii) SYNCOPE.
 ['bfird:fimAna] brahmin, ['bri:ne]
 ['bfird:fimAna stri:] brahmin woman, ['brd:nti]
 - (iii) Miscellaneous.

['upadrava] trouble, ['upedra] or ['upe,jzedra]; [ma'ha:navami] a sacred day, [ma:rne:mi]; ['smasana] cremation-ground, [masana]

['vandfija] barren woman, ['manjza] [prthvi:] earth, ['podəvi] or ['podəvi] [avasara] — [aməsəra] necessity.

PHONETIC TRANSCRIPTIONS.

I. The North Wind and the Sun [Brahmin's dialect]

'badikëpada 'ga:lila 'sa:dipo:pana:jëla:|| 'onjzi dinëntu | 'tirügönditti ˌsaːdipoːpəna:jëni su:tu | 'surrjede:verla. ori 'va:jude:vərla a:ja mittu opjzi panta pa:dönderu||avu 'ıza:jəgənnəga | a:ja mejtu 'vastrəni | irüvərëde:ru geppo:përa: | a:kulu a: 'pantöntu ızajitəna:kulintəla: | nisclejəm antëruill dumbută | 'ga:lide: vəra samöntu bi:sjeræ (é) suruvantëru aindəla dija vastrəni 'geppoijeræ(e) saiddhjainiddi| 'eitm izo:rudui | ga:libi:sjera: | a:tughattidu a:je ghattidu for vastreni 'podetonde|| unduni su'tu | 'su'rjede:veru | samontu prakaije(v) aijėruii ondu sajrenæ i ai saidipoipenaije i sikæ (sixæ) 'tadëvəræ(ë) 'ti:rəntæ | vastrəni mejtur gettell unduni suitu | 'vaijude:vərm pantöntu 'so:təna:kilintəla: 'surriede veru 'zajitena külintela: | nişclejentutu | a.kulirvərla pera pojerull

LITERAL TRANSLATION.

North wind-and wayfarer-and

One day-in one wandering-being way-farer (Acc.) having seen, sun-god-and wind-god-and him over a wager made. That what-for-it asked-if, his body-from cloth (Acc.) two-persons of who fling-off-makes he (honorific Plural) that wager-in won-has-he decision made-they. First wind god well blow-to beginning-made. Yet his cloth (Acc.) fling make to power-there-was-not. How much force-with wind blew-indeed, so much force-with he the cloth (Acc.) wrapped up This (Acc.) seen having, sun-god

⁽¹⁾ Long bars indicate pauses, the double ones marking full pauses and single ones half pauses.

Short bars (placed on the left side of words or of syllables) indicate accent, those marked on the top showing primary accent and the others placed on the bottom showing secondary accent.

strength-with shine-became. A-little hence that way-farer heat (Acc.) resist-to able-not-being, cloth (Acc.) body-from took. This seeing wind-god wager-in defeated-one to-be-and, sun-god won-and settled-having, they both away went.

Short notes regarding the sounds.1

(1) The relationship between dynamic stress and 'musical' pitch in the south Dravidian speeches requires to be experimentally investigated. So far as I can see, accent in these speeches is constituted of both elements. The accent-marks (strong, medium,) given in this essay only symbolise a perceptible rise in stress or in pitch. Generally speaking, accent falls on the root-syllables of native words when separately uttered. In connected speech, two degrees of accent may be demarcated thus roughly: the strong accent which falls on the initial root syllables of important words of each breath-group, and a less strong accent on the root-syllables of other emphatic words in the breath-group.

Statements or exclamations expressive of strong feelings of course involve different degrees and varieties of accent in which pitch or intonation completely submerges the stress element.

[epclonizi kastappa:] what a calamity!

[a: je batte] he came!

[i: po:jena:] Did'st thou go?

are statements which could be differently intoned according as the feeling underlying each is sorrow, surprise, anger, etc.

(2) I might draw the reader's attention to the neutral or mixed vowels cropping up in these passages. (a) When [A] occurs at the end of a word, it has a slightly more or open and frontalised value which I have represented with the symbol [a], as it is neither so dorsal as [a], nor so open and so frontalised as [a].

When [a] is rapidly uttered in connected sentences, it may become [v].

⁽¹⁾ For full phonological and grammatical notes, on a comparative basis, of a few Tulu passages in both the dialectal varieties, see my "Tulu Texts in Two Dialects" in BSOS, IV.

- (b) [A] in unaccented syllables has the value of [9]; but sometimes when for certain grammatical differentiations, [A] has to receive a little stress or accent, then it has the value of [8] which is a mixed vowel slightly more open than [9]. For instance, in the Second Person Plural tense forms, the ending is [-Arm] as distinguished from [-erm] of the Third Person forms. Here [Arm] becomes [-erm], and [-erm] becomes [-erm].
- (c) Similarly. [e] in unaccented syllables becomes [e], except when as in the third person plural tense endings (Masc. and Fem.) or in the Acc. terminations, the sound is definitely marked out with the value of [e], e.g., panta paidönderu, made wager; saidipo: penaijenu, wayfarer (Acc.)
- (3) For the use of [-u] and [-w] as enunciatives, see below under Phonology.
- (4) Except the enunciative u of old monosyllabic bases, the sounds u and ut appearing as enunciatives in Tulu words are elided in sandhi positions (i. e., in breath-groups) before other vowels: [iruvërud-êrut] who of the two, [a:kul-iruverut] theytwo both, [tirugond-itti] wandering-remaining, etc.
- (5) Note the use of [a:ku]u] as the honorific plural in this text; some Brahmins prefer [a:rum], the form employed as the honorific plural in the folk-speech.
- (6) I have very rarely heard [indu] employed by Brahmins who use [undu] instead.
- (7) Within breath-groups, when vowels appear contiguously (without elision), the glides y and v appear according to the front or dorsal nature of the hiatus created.
- (8) [tirugond-] wandering, and [podetonde] wrapped himself up: Note [-ond] and [ond] which have the value of conferring a particular "reflexive" nuance on the verb concerned. These "reflexive" bases are found in other south Dr. speeches

with [kond] the past stem of Dr. [kol], annexed to the past stems the simple bases of the verbs concerned. In Tulu (as also in Mal. colloquial), the initial [k-] has disappeared; in Tulu there has also been decerebralisation of [nd] in some cases like [tirugond-].

- (9) Some of the peculiarities of the Brahmins' speech reflected in this passage may be noted down here:
- (i) Inflexional: The Acc. ending -ni of the Br. dialect corresponds to -nu or -nu of the folk-speech.

The Abl. [mejttum] from the body answers to the folk-speech [mejddum].

The Locative [dinontu] at the day, [samontu], [pantontu] in the wager, show the infix [n]; the forms of the folk speech would be [dinodu], [pantodu], etc.

- (ii) [jza:jəgənnuga'] 'why-ask if', because, corresponds to the folk-speech [da:jəgənnuga].
 - (iii) [su:tu] having-Folk-speech [tu:du].
 - (iv) [nicc]əjəm-entërul] decision made:

[Anterm] is the past tense of Brahmins' [Amp-] to make, corresponding to the folk-speech [mAlp-] of which the past tense stem is [mAlt-].

- (iv) [iddi] not, as in [sa:dhja: niddi], would be [ijjzi] or even [icc]i] in the folk-speech.
- (v) The causative forms [geppo:perm] cause to take away and [geppo:jeræ] for causing to take away, correspond to the mass-dialect [deppa:verm] and [deppa:veræ] respectively.

[gepp.] take, of the Br. speech answers to [depp.] of the folk-dialect; the causative base is formed from these with [-a:v].

II. The Fox and the Grapes [Brahmins' dialect].

LITERAL TRANSLATION.

Fox-and Grapes-and

Hunger-with at-all suffer-not being-able one fox one day-in eat-to anything getting-not-having all-places-in walked-having trouble felt-having end-in one grapes-of garden-at gone having reached. Somewhat tallness being one tree of branch in grapes having-remained-that having seen, then jumping catch-to fox much trouble took. Many times jumped-having seen-yet, that fox-for grapes obtain-not-was-possible. Yet 'fox auddenly disappointment having creature was not. Self-from becoming work all making-not away-going not-thus decided-having, fox again jump-to beginning-made. Many tricks having animal it was-though, whatever tricks-with-yet fox to grapes obtain-was End-in much sorrow-with he garden-from away-ran. Away-running-while "sour-being grapes me-to want not" thus said having went. Each-each-to hopes fulfilled-being-not happen if, some one-or-other consolation feeling common is-indeed!

Translation.

subrâya: Hail! swami! (A usual form of greeting)

grîdhara: Namaskara!

snbr: When did you come fron Malabar?

gri: It is three days now since I came here.

su: Why have you come?

tri: I came here for witnessing the Laksa-dipa ceremony at Udupi and also to see my relations.

su: How long do you intend to stay here?

fri: For ten days more.

su: Do you still officiate as temple priest (in Malabar)?

sri: Not now. My term of office expired last month.

su: I hear of great floods (and rains) there (in Malabar)!

How much loss has been caused by this in your locality?

3ri: The losses and troubles are better imagined than described! The whole place was stricken with famine!

IV. A passage in the dialect of the Non-Brahmin cultivators called Bants

The evils of the Aliya-santana (matriarchal) system of inheritance prevalent among the Tuluva Non-Brahmins.

Literal Translation,

South Kanara district in aliyasantana family-of manager rule-according-to that family-of property-of holder becomeswell. Practice-in an old-man manager becomes. Him-to family-of property-from his wife-and-children (Acc.) big-to-make mind (desire) exists. This-on-account of he-made-which alienations (Acc.) back-restore-to and maintenance obtain-to suits filing such families-in frequently exist. Mismanagement-for suit made-having, him (Acc.) removed-sent-has-to-be. It his mismanagement from worse. It enmity-and quarrel-and causes, and great cost-of litigation-from family-of blood squeezing-like, property waste-becomes.

Connected Translation.

The manager of an Aliyasantana family is according to law a trustee of the family properties. In practice an old man becomes the manager, and his desire is to enrich his wife and children out of his trust-properties. On account of this, suits are frequently instituted for restoring his alienations and obtaining maintenance. He has to be removed from trusteeship through a suit. This is worse than the mismanagement itself. It causes enmity and quarrels, and the family assets are squandered, like one's life-blood.

A Brief Account of Tulu Phonological Correspondences.

The following brief sketch aims only at visualizing the correspondence of Tulu sounds to those of other Dravidian dialects as they appear in closely allied cognates. No attempt is made to propound theories, but the illustrations are made to speak for themselves. Wherever possible, the cognates are so selected as to be representative of the southern (Tamil, Kannada, Telugu, etc.,) the central (Kûi and Gôndi) and the northern (Kurukh and Brâhûi) groups of the Dravidian family.

It may be observed here that the ancient primary bases of Dravidian are chiefly monosyllabic being constituted of

- (i) a vowel alone, or
- (ii) a vowel+a consonant, or
- (iii) a consonant + a vowel; or
- (iv) a cons. + a vowel + a consonant;

the dissyllabic and the rare trissyllabic bases are all perhaps derivatives formed from the primary bases with the aid of secondary affix-morphemes.

In the following sketch, therefore, I have found it practical to take up the question of sound-correspondences according to the following scheme. [Note:—The symbols I have used in this chapter are those of the R. A. S. scheme of transliteration with two IPA symbols m and a.]

I. Consonants.

- (i) In initial positions.
- (ii) In terminal positions of primary bases.
- (iii) In Morphemes of secondary bases.

II. Vowels.

- (i) In initial or radical positions.
- (ii) In derivatives.
- (iii) Enunciatives.

[In the following sketch - word bases alone are considered, as nearly all of the striking correspondences and relationships between Tulu sounds and non-Tulu Dravidian sounds would be covered thereby; there are a few cases of interesting parallelisms and divergences in the post-positional endings and conjugational terminations. These are dealt with by me elsewhere.]

I

(1) Consonants in initial positions.

[The following consonants appear in initial positions of native Tulu word-bases.

k, g, c, j, t, d, n, p, b, m, r, l, s, s, h and y and v.

(1) k. Initial k- of Tulu answers to k- of other dialects or to the fricatives or affricates of yet others. A rough cleavage is found in Dravidian between those dialects which preserve an ancient k before front vowels and those which have changed this k before front vowels to fricatives and affricates. Tulu belongs to the former group, as illustrated by the following:

Kittu (fire) — Kodagu ciccu, Tel. ciccu; cf. also Gôndi cicc. Kurukh cic.

Kila, kela (some) — Tam. sila, sela.

Kebi (ear) — Tam. sevi, Mal. cevi, Tel. cevi.

Kir- (small) - Tam. siru, Mal. cer.-

(ii) Tulu k- before dorsal vowels corresponds to k- of the southern and central dialects and to x- of the north:

Kai (hand) — south Dr. Kai, gei (but Tel. ceyya).

Kâlm (leg) — south Dr. Kâl, Kûi kâlu,

Koy- (to reap) - south Dr. Koy-, Gô. koy , Kur. xoy-

(2) (1) g- corresponds to g- or k- of other dialects in certain instances:

gandu (male) — cf. Tel. gand αd - (to copulate), Kann. gandu (strength, male)

gații (firm, strong) — Kann. gații, Tam. kații, Tel. gații Kîr., (to scratch)- Kann. Tel. gîr., Tam. kîr.. gâvu, kâvu (heat, glare) — Tam. kây-vu, Kanr, kâv. guri, guļi (hole, pit) — Tam. kuļi, Kann. Kuļi, kuļi, Tel. groyyi.

(3) c- (i) In a very few instances, the affricate c-1 corresponds to the fricatives and affricates:

cadapu (leanness) — Mal. cadappu cûdu, sûdu (heat) — Tam. sûdu, Mal. cûdu, Kann. sûdu Cali, sali (chill) — Kann. cali, Tam. sali.

(ii) In some instances. Tulu c- is a rare sub-dialectal variant existing beside t- (and s- in some cases). The cognates in other dialects generally show t-

Candi (wetness), beside sampu, tampu } — cf. Tam. tan (cold, wet)

Câræ (coconut tree) beside }— cf. Tam tâlai ('coconut tree') târæ, tâlæ

cû, beside tû, sû (fire) — see below.

cêļu (scorpion), beside têļu, sēļu teļu, Br. telh.

caræ (head), taræ — south Dr. tala, Kûi tlâu, Gô. talâ. Also cf. caila (oil) for Skt. taila.

4. j. (i) This sound corresponds ty c., s or j. of other dialects in a few cases:

jari (slope)—cf. Tam. sari- (to incline), Kann. jari, Mal. carijiræ (small) — cf. Tam. siru, Tel. ciru.

jadar- (to be scattered), beside } = Tam. sidar-, Kann. cedar-, kedar

jêvu, jôvu (child) — cf. Tam semmal (child).

(5) \tilde{n} - is not a very common sound in Tulu, but the influence of the neighbouring Mal. is responsible for the sub dialectal \tilde{n} in a very few words like the following:

⁽¹⁾ The influence of Malyalam is probably responsible for c. in these forms.

ñonnu (shrivelled) — Mal. ñaļunn- (to be shrivelled) nekk-, nakk- (to crush) — Mal. nekk-

(6) t-(i) In a large number of instances, t- answers to t- of other dialects:

teri- (to be known) — south Dr. teri-

tey- (to be rubbed) - ,, tey-

teļu (scorpion) — ,, teļ, Br. telh

tôd- - , tôd-

(ii) In the following and other instances, t-1 alternates sub-dialectally with s- and h; the cognates of other Dr. dialects generally show only t-2.

tû, sû, hû, cû (fire) — cf. Tam. tû (bright), Br. tûbe (moon), south Dr. tî (fire)

tôj-, sôj-, hôj- (to appear) — Tom. tônd'r- Kann. tôr-, tôr-, Tel. tôns-, Kûi tônj-.

teli-, seli-, heli- (to become clear) — south Dr. teli- (to become clear).

(iii) In a very few cases, t- appears to correspond to s-, etc. c- etc. of other dialects, derived from an original k-; these t- forms are sub-dialectal:

tett-, beside sett- (to rot) — cf. Tam., Mal., Kann. ked-(to become rotten), Tel. ced (to be spoiled).

tutt- (to wear dress), } — of. Tam. sut't'r- (to go round), beside sutt

⁽¹⁾ For the classification of the conditions in which some affricates and fricatives are related to k on the one hand and others to t on the other, see my papers on "Ancient Dr. k-", "Tulu Fricatives and Sibilants" and "Dr. Affricates and Fricatives".

⁽²⁾ I may point out here that (i) t-forms are generally more common than their variants with s- and h-; (ii) in some instances the Brahmins use s- forms, while others use t- forms. (iii) in some others the "low-class" communities use s- forms, while others (including Brahmins) favour t- forms; and (iv) the Jains and others in the eastern parts of Tulu nadu use the h- variants.

(7) d- (i) The voiced sound d- corresponds to t or d- of other dialects in many cases; the voiced d- corresponding to t is found in southern dialects like Telugu and Kannada and in the central and northern dialects also occasionally.

daver- (to become loose) — Tam. tavar- (to slip off) Kann. tavar-, davar-

dinj- (to be crowded, crammed). — cf. Tam ting- (to beside jinj- [sub-dialectal] (to be crowded), Tel cikk- (dense).

(ii) In the following instances with initial d-, the sound owes its initial position to the operation of Aphæresis consequent on Accent-shift. As pointed out elsewhere by me, the change here involved the conversion of an original initial *d-to d in the mass-dialect of Tulu. The aphæresized forms are popular in the folk-speech, while the full forms are retained in several cases in the Brahmins' dialect.

```
da-mma (left side)
da-ttw ( ,, ),
beside eda (left),
eda-mbu (left side),
eda-ttu ( ,, ),
eda-nkw (on the left)

dambh
from
the Todig- (to
```

cf. south Dr. eda(m) (left), Tel. eda and dâ [For the conversion of d-to dinitially, cf. Tulu adaptations dambha from Skt. dambha. dabbi from dabbi, etc. and cf. also the Tel. alternants like dig-, dig- (to descend)

```
dabbum (crack)—[cf. adar cf. Tam. -(adar-vu (crack) to crack)]
dapp (to plough),
```

beside adapp

-cf. Kann. adak- (to press down)

daræ (fence) beside | - Mal. adir boundary, limit, aduru (boundary limit) fence

de-k-katti (arecanut) - cf. Mal. adekka-k-katti, Kann adegatti adekottu, adakegatti; Tel. adakottu, akottu

de-k-kârm (space between the legs), -cf. south Dr. eda(m) (space, room) beside ada-k-kâlm

dakk- (to cast away), beside Br. s' dialect with finger)

-cf. Kann. ade (to throw or strike with finger)

dang-, deng (to be } - cf. Tam, Mal. adang-(to be hidden), beside adang contained, etc.)

(iii) In the following Interrogatives we find an initial d-(which in some cases alternates sub-dialectally with j-): danse, beside janse (what?)—cf. Tam (y)ên, (y)ênna, Kann. (y)ênu

da (which)—Tam. ya-d, ya-v-ad, Kann yad, yavad, yavad etc da-la, jala (anything) da-y-egu, jayegu (why?) base ya

(8) n (i) This sound generally corresponds to n- of other dialects:

nîrm (water)—south Dr. nîr, Kûî nîr; nil-p-(to stand, stay)—sound Dr. nil, Kûi nil. netterm (blood)—Kann. nettar, Gôndi nettar, Br. ditar.

nadu (middle) - south Dr. nadu.

(ii) the following words (from the mass colloquial) with initial n-seem to be the result of Aphæresis:

nuppu (food, meal), beside

Brahmin's uṇ-pu or umpu

-cf south Dr. uṇ-(to eat, take a meal).

nung (to be dried up) -cf. Tam. uṅaṅg-, Mal. uṇaṅṅ-, Koḍagu oṇaṅṅ-

nungelu, beside unangelu }-unang-above.

netta (of this) beside indetta neddu (from this) ,, indeddu nettu (at this) ,, indettu.

(9) p-corresponds to p- of other dialects:

puli (tiger) -south Dr. puli, Go puli.

puri (worm) — cf. Tam., Kann., Mal. pulu, Tel. purugu, Kûi priu, Gô. pupî

parm (tooth) -south Dr. pal

(10) b (i) This sound corresponds to v of some dialects (Tam, Tel, Mal, Kûi. Gôndi) and to be of others (Kuan, Karukh Brâhûî).

bar- (to come) — Tan. var-, Kûi va-, Kann. bar-, Br. bar-, Kur bar-,

bâyi (month)—Tam, vây, Kann. bây, Tel. vây-i, Kur bây bâlæ, bâræ (plantain tree)—Tam vâl ai, Kann bâle

(ii) In a few instances, Tulu initial be also corresponds to p. of other dialects.

bodedi (wife) __ cf. old Kann. pendati, Tam. pendati.

bordw, beside pordw (battle) - cf. Tam., Mal., Kann. pôr (battle), porud- (to fight), Tel. pôru,

(11) m. (i) m. generally corresponds to m. of other dialects:

mara (tree) __ south Dr. mara(m), Tel. mrânu, Kui mrahnu, Gô. marâ, Kur mann.

min- (to shine, glitter) _ south Dr. min.

murk-, mulk- (to sink, to be immersed) Tam. mulug-, Kann. mulg, Kûi munj-, Kur-mulx.

- (ii) m- in mêli (marriage) corresponds to v-. Cf. Mal. vêli (marriage), Tam vêl- (to desire to marry), Kur benj- (to marry).
- (iii) (a) In mûlu (here) we have Apharesis (consequent on Accent shift) and change of v- to m: i-v ulu, [a formation exactly like avulu (there) which is retained in Tulu withut Apharesis] >vûlu >mûlu,
 - (b) mêru, beside cf. Tam., Mal. Kann. ivar, used as sub-dialectal imberul an honorific plural beside its other meaning of normal plurality of number.

mêru < im(b)eru < iberu <i-var.

(c) môlu (she, this woman) beside Brahmins' imbolu — cf. i-v-al (she, this woman)

Aphæresis is responsible for môlu she (here), as in the instances given above.

- (12) y- does not appear fully evaluated as a consonant except in a few words like yan (1), yada (left side) of the mass colloqual; but a semi-consonantal y does crop up before the front initial vowels of Tulu words. Tulu speakers themselves do not notice this sound and do not regard it is an essential component of the words concerned; nevertheless, the foreigner never fails to distinguish its presence before initial front vowels as in yenne (oil) yenca (how ?), etc. A similar y exists before front initial vowels in other south Dr. speeches.
- (13) r- occurs in initial positions of a small number of native words, as the result of Aphæresis consequent on Accent-shift:

```
rumb- (to feel off) __ cf. Mal. uruv-, Tam. uruv-
```

renkæ (wing) ___ cf. Tam. irakkai, coll. rekka, Tel. rekka, irakka.

```
renk- (to roll on the ground), beside orenk cf. Tam. orai-, etc.
```

(14) I- also appears initially, as the result of Aphæresis; it is noteworthy that the Brahmins' sub-dialect of Tulu preserves in many cases the older non-aphæresized forms:

```
lampu (tender) beside } — Tam. ila-, ela-, Kann. ele, Tel. lê-, Kûi la-
```

lapp- (to measure), be-} - South Dr. ala- (to measure, etc.)

lepp- (to call), beside Brs.' (v)olepp- Tam. vili-, Mal. vili-, Tel. pilits-, Toda piş-

lumb- (to wash), be- } _ Tam., Mal., Kann. alambside Brs.' alumb-

lakk- (to get up) __ cf. Tam., Mal., Kann. el- (to rise), Tel. lê- (to get up).

(15) s. (i) s-corresponds to the fricative s. of Tamil, the affricate c. of Mal. and the sibilant s. of Kann., in the following instances:

```
suli (eddy) __ Tam. suli, Mal. culi, Kann. suli, suli-
sutt- (to roll) __ Tam. sut't'r-, Mal. cut't'-, Kann. sutt-
```

- sai-p- (to die) __ Tam. sâ-, Mal. câ-, Kann. sâ-.
- (ii) s- alternates sub-dialectally with t- in Tulu itself. Vide supra.
- (iii) A few rare variants with s. are sometimes heard in the enunciation of some people, alternating with s. forms: sird., sird., tird. (to mend), sîpæ, sîpæ, tîpæ (sweetness), etc.
- (16) h. (i) h. alternates sub-dialectally with t. and s. in Tulu itself, as already indicated.
- (ii) h- forms corresponding to certain Kannada h- words (derived from original p- words) are borrowings in Tulu from Kann. (Vide my paper in Ind. Ant., March 1933).
 - (iii) Initial h- in the following appears to be prothetic:

hêr- (to climb) beside êr- _ Tam., Mal., Kann, êr.

helse (leaf-offering) beside } - Tam, Mal., Kann. ilai, else, erse (leaf)

haitu, beside aitur (at that), the Loc. of avu (that).

hamar (to be immersed), beside amar-

Unique Features of Tulu Anlaut.

- 1. The sub-dialectal alternation of t., s., and h. in words, the cognates of which in other dialects show t.
- 2. The partially voiced secondary glottal fricative h- in initial positions.
- 3. The occurrence of 1 and r in initial positions of words, as the result of Aphæresis consequent on Accent-shift.
 - 4. Initial d < d (derived by Aphæresis).
- 5. The presence of the voiced sounds g-, j, d, in initial positions.

Of these features, 1 is unique in Tulu, 2 is met with also in Kûi, 3 is found also in Telugu and Kûi, and 4 has some parallels in Telugu. The fifth feature is shared in greater or lesser degree by many dialects of Dravidian; Tamil, Mal. and the lesser varieties

⁽¹⁾ It is worthy of note here that only an extremely, small percentage of people use fi- forms instead of the more common forms with t- and s-.

of these speeches however do not tolerate these voiced consonants in initial positions of native words.

(2) Consonants in terminal positions of bases.

The consonants and consonant-groups (apart from attenuations like -me, -tana, etc.) appearing in Dr. word-bases are the following:

- (1) k, nk, g, ng.
- (2) t. nt. d. nd.
- (3) t, nt, d, nd.
- (4) v, b, mb, p, mp.
- (5) c, ñc, j, ñj.
- (6) l, l.
- (7) r, r.
- (8) n.
- (9) $y, \dot{s}, \dot{s}, (\dot{j})$.

These appear in what we might distinguish here as the primary and the secondary bases.

The following points are noteworthy in connection with Dr. word-formation:

- (a) Primary Dr. bases (monosyllabic) may, or may not have, final consonants. In case final consonants are found, these consonants are of the following types:
- (i) In a number of ancient bases with short radical vowels, like ad-u, kad-u, ar-u, etc, short voiced plosives or other short voiced consonants are found.
- (ii) In other bases with short radical vowels, either geminated surds or consonant groups formed of nasals and plosives, are met with.
- (iii) If the radical vowel is long, single plosives (voiced or voiceless) and consonant groups formed of nasals and plosives are alone found, the geminated plosives (characteristic of (ii) above) being conspicuous by their absence.
- (c) While Tamil (on account of its phenomenal tendency to voice inter-vocal surds and surds in contact with nasals) shows

no group formed of nasals and surds, the other dialects of the south (including Tulu) tolerate such consonant groups.

- (d) The sounds and the sound-groups belonging to each of the sets listed above are related to one another. Caldwell's-comments on this point to a certain extent bring out this interrelationship, though some of his observations require modification and revision in the light of new facts and perspectives. The nasal constituents of the consonant group appear to be secondary growths in connection with the plosives with which they are respectively associated.
- (e) These consonants and consonant-groups are conspicuous enough in the southern dialects to be distinguished as such, while they are present in attenuated and modified shapes in the central Indian and the northern dialects.

Primary Bases.

```
Kann. têg-, Tam. tigatt-, Tel.
     (1) têg (to belch)
                                       têp., dêv-
         pong- (to rise)
                                     South Dr. pong-
         tânk- (to take care of)}___
                                   Tam. tâng- (to support)
         tang (to assist)
         agg-æ (shoot, branch) _ Mal. agu- (shoot) Kûi âk-i
                                       (branch, shoot) Tel. âku
                                       (leaf).
    (2) mutt- (to knock)
                                    South Dr. mutt-
       kûd- (to be joined)
                                              kûd-
        nad-u,(middle)
                                              nad-u
        tand-ur (stem)
                                              tand.
    (3) (i) \hat{\mathbf{u}}d- (to blow)
                                              ûd-
                                       79
            pond- (to rise)
                                              pond.
    (ii) Tulu medial -d- corresponds to r of Tamil, Mal. old Kann.
and old. Tel.
        tud-se, sud-se (river) ___ Kann. tur-e, Tam. tur-ai.
        nûd-m (hundred)
                              __ South Dr. nûr-u
        nâd- (to stink)
                                             nâr.
        pad-se (rock)
                                             pâr-ai, pâre, etc.
                                       ,,
```

(4) This group of morphemes definitely occurs only in
derivatives.
(5) (i) ây- (to select) Tam., Mal. ây-
ey- (to shoot arrow) , ey
(ii) & rarely occurs in Tulu as a terminal morpheme.
(iii) s is another derivative morpheme. In Tulu, s occurs in
pass-beside patt- (to be attached), in ess-beside ett- (to raise a
fund) and posur- beside pottur- (to kindle), isse (now) beside
it'a), less (having called) beside lett
(iv) j, a frequent medial sound in Tulu corresponds to three different sounds of other dialects:
aj- in the following answers to -y- of Tamil:
kajapu, beside kayapu Tam. kay-pu (bitter taste)
koj-e- (to reap) south Dr. ko-y-
paj-i (green) ,, pay-pas; pas-
β. j in the following corresponds to r:
kaj-se (stain, blackness) Tam. kar-ai
maj-e- (to conceal), mar-ai-
ûj- (to percolate) ,, ûr-
aj-i (six), ar-
ka-ñj-i (calf) ,, kand'ru, Kann. karu.
tôj- (to appear), beside Kann. tôr, tôr, tôr, Tam. tônd'r-
taj-a-p- (to cut) Tam. tar ai
7. Tulu -j- answers to -l- in the following.
ijji- (not) South Dr. il, ill-ai; cf.
Tam. ind'ri also.
pej-æ (kind of Artocarpus) Tam., Mal. pala-vu, palâ.
(6) (i) kal-l-m (stone) _ South Dr. kal.
nil- (to stand), nil-
bâl-w (sword) ,, val, bâl.
kol- (to cleave to) , kol-

(ii) -1 in the Brahmins' sub-dialect of Tulu corresponds in the following to the peculiar continuative -1 of Tam., Mal., and old Kannada; it may be observed here that in the folk-dialect of Tulu the sound corresponding to 1 in these instances is -r-:

tal se, beside folk-speech tar-se (cocoanut tree)

__ Tam. tâl-ai ('cocoanut tree')

bâl-æ, bâr æ (plantain tree) _ Tam. vâl-ai, old Kann. bâl-e kôli, kôri (fowl) — Tam, old Kann. kôli.

guļi, guri (pit) — " kuļi

bûl, bûr- (to fall) — Tam vil- old Kann. bûl.

It is noteworthy that generally speaking, both the Brahmins' sub-dialect and the folk-speech alike retain-r- corresponding to 1- of Tamil, etc., when this sound appears as a constituent of consonant of groups:

parndu (ripe fruit) — cf. Tam., Mal. pala-m.

portu (time) - Tam., Mal. poludu,

[beside also poltu] Kann. poltu, portu, hottu Tel. proddu, poddu.

urdu (black gram) - Tam. ulundu.

(7) r- (i) This Tulu sound stands for the post-dental r of other dislects in instances like the following:

tir- (to be finished) — south Dr. tir-

nîrm (water) — south Dr. nîr.

ner-æ (straightness) — south Dr. nêr (straight)

(ii) In some instances r corresponds to the cerebral r of other dialects, which r does not exist in Tulu now (as it has either become r or i):

pâr- (to fly), to run - Tam., Mal., old Kann. T. pâr-

or-se (sheath) Tam. or-ai; Mal., Tel. or-a; Kann. or-e.

mâr- (to sell) — Kann. mâr- (to sell) Tam., Mal. mâr (to change).

(iii) Tulur answers to the alveolar lateral 1 of other dialects in the following:

iræ (leaf), beside ilæ - Tam. ilai. Mal. ila, Kann. ele.

parm (tooth) — south Dr. pal. birm (bow) — south Dr. wil, bil. kârm (leg) — south Dr. kâl. kur-k- (to shake) — south kul-u-kk-

- (iv) As noted above, the folk-speech shows r corresponding to 1 of Tamil, Mal. and old Kann.
 - (8) n (i) n corresponds to n of other dialects: tannu (cold) Tam. Mal., Kann. tan., Tel. ts-an-un- (to eat, take meal) south Dr. un-, Kûi un-, Gô. und-ponnu (girls) south Dr. pen, pon
 - (ii) n in the following corresponds to 1 of other dialects:
 gân (to glow)—Mal, kâl- (to be ablaze), Tel. kâl- (to burn)
 kên- (to hear)—south Dr. kel-, Gô. kenjkôn- (to hold)—south Dr. kol-, Tal. kon.

Derivative Positions.

- (1) ul-k- (to be sprained) Tam., Mal. ulukk-.naḍa-k-æ (behaviour) Tam. naḍakk-âi. kere-ṇg-w (root) Tam., Mal. kilaṇg-u
- In the following, the affix is somewhat unique in Tulu:—
 pôḍi-g-æ (fear) Mal. pêḍi (fear), Kann. pêḍi, hêḍi
 (coward)
 - male-ng- (to recline) Tam., Mal. malar-, Kann. malag-
- (2) baradu (useless) Tam., Mal. varadu, Kann. baredu maradu (barrenness) Tam. maladu pijint- (to be twisted) south Dr. pirikurunt- (to contract) "kurul-, surul-, etc
- (3) kor-nd-u (tender) Tam., Mal. kolu-nd-u par-nd-u (ripe fruit) Tam., Mal, pala-m
- (4) [The affixes are derivative]
 ur-c- (to go to stool) _cf. Tam. oll-kk- (to empty)
 alec-, beside alek(to shake) Tam., Mal. alakk-

```
purnc- (to squeeze)__ ,,
                                        pili-
     parnc- (to prattle)_cf. Tam., Mal. parai- (to speak)
(5) adavu (closing)...Tam. adai-vu Mal. adavu-
     parab-æ, palab-æ cf. South Dr. pala (old).
        (old person)
     komb-u (branch) _South Dr. kombu
     adep-u (lid, closure)__ ,, adai-p-u
(6) 1 and 1. (In secondary position 1 is becoming gradually
     merged in 1.1
     oyl- (to stagger)_cf. Tam dy-
     kurul, kurul (to be } __Tam, surul. Kann.
       contracted)
     birelu (finger)_South Dr. viral.
     udalm (belly)__ ,, udal (body)
(7) r__normal
     tuder-m (lamp)....Tam. sudar (the sun or moon),

    gadusu } (heifer)_Kann. kadasu (heifer)
```

nigasu (repletion)_cf. Kann. negasu, Kann. negi-

(to rise)

^{1.} This -s- is related to -t-, -d-, etc. in elidus, elasu (what is young, tender), peridus, perisu (what is big), etc. of Tamil elidu, elasu (what is young) and piridu, percu, heccu (what is big) of Kannada.

- (1) Vowels in primary (radical) positions,
- (1) Tulu a, \hat{a} , \hat{i} , \hat{i} , u, \hat{u} regularly correspond to the same sounds of other dialects.
- (2) e and ê: (i) These are normal in a number of words like the following: eri- (to burn) elu, ellu (bone), êļu (seven) êr- (to ascend).
- (ii) There is a rule in South Dravidian whereby a short radical i (of words of more than one syllable) followed by an open vowel in the next syllable is replaced by e: the operation of this rule is restricted to derivative words only and, further, the change occurs only when in the above circumstances the consonant immediately following the radical vowel is a short one. The literary varieties of Tamil and Mal. show in the above circumstances the i forms, while the colloquials show e- words; in Kann, and Tel., even the literary speeches have accepted a number of e- forms. Tulu shows forms with i and e side by side in some cases, and those with e alone in others:

idæ, edæ (place)....Tam., Mal. idam, coll. edam. ilæ, elæ, eræ (leaf)....Tam. ilai, coll. Tam. elai, Kann. ele.

tinasu, tenasu (food)_Kann. tinisu, tinasu, tenasu.

nene-p. (to imagine) Tam. ninai-, coll. Tam. nenei, Kann. nene-

nela (earth, soil)_Tam. nilai, coll. Tam. nelai, Kann. nele

Kerengu (Sweet potato)_Tam. Kilangu, coll. Kelengu

^{1.} pili (tiger) answering to puli of other Dr. speeches, and pilæ (pollution) corresponding to pulai, pule, pole, show i.

In mennu, mennu (spark), menc (to shine), beside minc, there is an opening of the vowel in Tulu sub-dialectal forms. cf. a similar opening in sub-dialectal tenasu beside tinasu, (food).

(iii) In certain adaptations from IA of words with initial voiced plosives followed by a, and in a few native words with initial affricates followed by a, some of the south Dr speeches show in the colloquial a change of a to e or a. Of course, the instances where this change occurs in native words vary with the speeches; in Tulu there are instances like the following with -a- and a- side by side:

taræ, caræ, ceræ (head) gaitæ, getiæ (clod, lump)

(iv) Tulu -ê- in the following, corresponds to -â- of some of the other dialects:

êdu (goat) — Tam. âdu, Kann. âdu, Tel. êdu.

êmæ (turtle) — Tam., Mal. âmai.

eru (who?)— Tam. âru, Kann. (y)âru.

ênu (1) beside folk speech yanu-

-Tam. yan, nan, Kann. an, nan, Tel. nênu.

(3) ō-(i) normal in words like the following:
onji (one), ori (one person)—Tam. oru, ond'rw, Kann.
ondn.

ôd- (to run) -South Dr. ôd-

above, there exists in South Dr. a change of u>o also. Tulu shows forms with u and o side by side in some cases, and words with o alone in others: udelu, odelu (belly)—South Dr. udal, odal.

ugaru, ogaru (brackishness)—Tam. uvar.

nnasu, onasu (food)—Kann. onasu.

oræ (Sheath)— Tam. urai, coll. Tam. orai.

mosalæ (crocodile) —Tam. mudalai, modalai Kann.

mosale

(iii) -o-or-ô- in connection with bilabials corresponds to -e (or in rare cases to a.) of the literary speeches of South India.

ponnu (girl) — South Dr. literary pen, pennu, coll.

bolpu (whiteness) — Tam. veluppu, Kann. belpu. bôd — (to want, desire) — Tam. vend. Kann. bëd. por-p- (to pluck) — Tam. Mal.pari — Kann. pare-.

[It may be noted that in the colloquial of Tam. itself, the bilabials have the power of changing the literary e- to -o-]

(iv) Tulu -o- in the following answers to -a- of other dialects.

oret—(to wrangle)—Cf. Tam. alatt—
operu (moss, lichens)— " an—(to be attached closely)

ôvu (which?)—cf. the syntactic Interr. particle-â- of Tam., Mal. and Kann., and also Kûi à (which?)

(v) -ô- in the following corresponds to û of other dialects:

môdu (cloudy)—cf. Tam. mûd-al

(cloudiness)

cf. the following adaptations in Tulu from IA:—
môrti (image) for mûrti
môdæ (fool) " mûdha
môtra (urine) " mûtra
koşta (leprosy), kuşta

(vi) -o- in the following few instances appears to be due to the avoidance of initial v.

odæ (round cake).

(called vade) — Tam. vadai.

olevu (curve) —, valavu, base val

ole (to call) — Mal. vili. Tel. pil.

Tulu regularly shows (like Kann. Kur. and Br.) b corresponding to w of Tam., Tel, Kûi and Gôndi; the above forms with o-(apparently) <(v) + vowel) are possibly adaptations in Tulu of w words from the neighbouring Mal. It may be noted, however, that ole- (to call) and its counterpart le-in the folk speech are very common and frequently used while the form bulp (to cry out) normally corresponding to Mal vili, etc.) is but rarely used in common speech.

(vi) -u- in the following, neighboured by bilabials, corresponds to -i- of other southern dialects:

```
bûr-, bûl - (to fall)—Tam. vîl , vil , Kann. bûl-: bud- (to leave) — Tam. vid-, Kann. bud-bul-p-(to cry out) — ,, vil-i-bulæ (standing crops) — ,, vil-ai
```

- (2) Vowels in secondary positions
- (1) -i- normal—
 er-i- (to burn)
 ad-i- (bottom)
 pod-i (powder)
- (2) -a- normal-in some cases —

kad-a- (to cross), nada-(to walk), ala- (to measure), mada-(to forget.) etc.

(3) -e in verbs corresponds to ai- of Tam., and to -e- of Kann. kale - (to be lost, deducted) — kal ai, kale-.

ade (to shut) — ad-ai, ade.

(4) -æ-answers in nouns to Tamil-ai and Kann.—e.

bâļæ (plantain tree) — vâļ-ai, bâļ e

iræ, ilæ (leaf)-il-ai, ele

(3) The vowels ut and u as enunciatives.

(i) As in the other south Dr. dialects, the vocalic enunciative at the end of old monosyllabic bases with short radical vowels and short terminal consonants, is-u:

kad-u (hard, firm), nad-u (middle), puru (snail, worm), ar-u (brim, edge), etc.

(ii) Monosyllabic bases with long radical vowels or with short radical vowels followed by geminated consonants or by consonant groups, show generally (see below for exceptions) the enunciative up in Tulu. Colloquial Tamil in similar cases shows -up, Mal.-9, Kannada and Telugu -u:

nâd w (country) — Tam. nâdw, Mal. nâdə, Kann. nâd-u. kâr w (leg) — Tam. kâlw, etc.

katt-u (bond) — Tam. kattu, etc.

kann-u (eye) — Tam. kannu, etc.

Dissyllabic bases also show - u:

pudar-u (name)—Tam. peyar-ut. Kann. hesaru, Tel. peru

ugar u (brackish) - Tam. uvaru, etc.

barad-w (barren) — " varadw, etc.

(iii) Exceptions in Tulu to the above rule are furnished by instances where labial consonants or dorsal vowels in the neighbouring syllable are found; in all these cases the enunciative is -u and not -um:

ponn u (girl)
jôv-u, beside jêv-u (child, etc.)
bolp-u (whiteness)
ucc-u (kind of snake)
morod-u (empty)
kapp-u (blackness)

(iv) Certain post-positional endings show -w; the rule of vocalic harmony pointed out in (iii) above is applicable here too.

(v) The use of -u and -u in the following personal pronouns is illustrative of the same rule of vocalic harmony:

Honorific âr w (they), but âkuj-u, the plural proper.

Honorific imber-u (folk-speech mer-u) meaning this person) beside mökuļ-u (these persons) the Plural proper.

- (vi) -ur or -u appears in the following conjugational forms; the rule of vocalic harmony is found here too:
- (a) Third Person Sing. of the Present, the Past, the Perfect and the Pluperfect tenses:

Compare Third Person Present Sing. malp-undu of the folk-speech and ampunu of the Brahmins' dialect, with the corresponding Past Sing. maltund-un, antun-un.

- (b) Past participle (maltudu) antudu, (having made), but pôtu, (having gone), sûtu, tûdu (having seen), etc.
- (c) Third Person Feminine Sing, Past, etc., with -al-u: Pr. malpuval-u fampuval-u, etc.
- (d) Second and Third Persons Pl. (Masc. and Fem. only) of all tenses,—with ar w, er-w: malpuvar-w, ampuvar w
- (e) The Neg. tenses corresponding to (c) and (d) in the folk-dialect show $\cdot \mathbf{w}$.

- [Note. In (c), (d) and (s) the enunciative is w only, as the immediately preceding syllable in these cases has no dorsal vowels]
- (f) The Neuter Future Third Pers. Sing. with -p- shows -u only [note the influence of the bilabial];

malpu, ampu.

- (g) Compare Third Person Imperative (having -ad w) with the so-called Potential (having -od u): malp ad-w, amp-ad-w (let him, her, it make) beside malp od-u, amp od-u (it is necessary to make) and maltondu, antondu (making).
- [Note: (1) Excepting the u of monosyllabic words (see (i) above), all enunciatives (whether u or u) are elided in sandhi in South Dr. dialects; this rule is true of Tulu also.
- (2) While in Tam., Mal. and old Kann., the enunciatives need not necessarily appear after the consonants I, r, n, n, I, y, these enunciatives are invariably present in modern Tulu; of the condition of old Tulu we can have no direct idea as materials are lacking. See my paper on Dr. Sandhi for further information about the use of enunciatives in Dr.]

Some significant features of Tulu Phonology.

- (1) The retention of ancient k-corresponding to the k-derived affricates and fricatives of certain dialects.
- (1) The sub-dialects show t., s. and h. in initial positions, corresponding mostly to t. of other dialects.

The sub-dialectal variations are unique in Tulu.

(3) The operation of Accent-shift and Aphæresis, resulting in l, r, d (< d), j (and some cases of n and m) assuming initial positions of words.

Some specific instances of this change in **Tulu** are unique; but aphæresis has operated in **Kûi** and Telugu also.]

- (4) The correspondence of some cases of Tulu medial-j-(and d-) to-r-of the other southern dialects. [Unique.]
- (5) The correspondence of **Tulur** (and intervocal lin the Brahmin's speech) to the sound l of Tamil, etc.

[This correspondence is met with in certain Kann. and Tel. words also.]

(6) The cleavage between Brahmins' speech and folk-Tulu.

THE RUDHARI DIALECT.

(High Rudhárí).

Where Spoken. The Rudhari dialect, discovered by the present writer in 1930, is spoken in a region called Rudhar, which belongs to the Raja of Chineni, a jagir in Jammu. It is situated about 70 miles north of Jammu town and borders on the lofty peak of Suddha Mahādeya, a place of pilgrimage with a temple of Siva flocked by thousands of pilgrims every year. Near it is also situated Gauri Kund, a place where Parvati is said to have performed the penance described by Kālidāsa in his Kumāra sambhava. Rudhār is situated between two rivulets, the Raggi and the Thanda Pani The Raggi is a larger stream dividing the Khasali tract from Rudhar, and falling into the Chenab at a point about 10 miles west of Doda (the dialect of which, the Sirāji of Doda, has been described in the Linguistic Survey of India Vol. VIII. Part II). and about 30 miles west of Bhadarwah town. The most interesting place in Rudhar is a village recently named Bilandpur by the late Rājā of Chineni, but the old name of which is Zangal "forest." It is situated on a lofty ridge about 7000 ft. high, with a natural grassy tableland on the top, and with dense forests on both sides. The other important villages are Drāmrū, Rānkā, Kharaoth, Sangā Charhotta and Assar. Of these five villages, the first three are situated on the lofty ridge mentioned above, and have a dialect of their own, which we shall call High Rudhari, and which will be exclusively treated in this paper. The dialect of the fourth village, Sangā Charhottā, (which are really two villages representing a number of hamlets widely apart) may be called mid-Rudhārī, while it is called nālerī Rudhārī "Rudhārī of the vallev" by the inhabitants. The dialect of the fifth village, Assar, a place near the junction of the second stream Thanda Pani with the Chepāb belongs to a region which is the lowest part of Rudhār. Its dialect is called by the inhabitants Kandhialū Rudhāri—the "Rudhārī of the Kandhī or sub-montane tract" which we shall cal! Low Rudhārī.

History. According to local tradition, Dramru is the oldest village. It was originally independent, being ruled over by Rānās (petty chiefs) who were Birian Thakkurs (and not Rajpūts) by caste. Here they had their own mintage, until they were driven out by Raipūt immigrants from Chamba. These Chambyal Rājpūts are said to have come from Bhatti Chawārī in Chambā. When Dramru was seized by the Rajputs, the Birian Thakkurs then made a settlement at Zangal, now called Bilandpur. Later, however, the Chambyal colony at Dramru was seized and annexed by Chineni, in which the whole region is now situated. It is important to take note of the fact that the oldest ruling caste here was the Thakkur caste and that the Raipūts came later. Side by side with these two castes there was a third, the untouchable caste. These untouchables are called "Meghs", and they probably came along with both the above castes from time to time It is these castes which mainly inhabit the region at present and contribute to the characteristic features of this dialect which is pre-eminently a caste-dialect.

Characteristic Features. Rudhārî has the following main features:—

- I. It is a Pahäri dialect.
- II. It is a caste dialect.

We shall consider these points in order.

I. Rudhārī is bounded on the North by the Sirājī of Dodā. on the East by Khasālī, on the South by Seutī, Khasālī and Dogrī, and on the West by Dogrī. Besides these dialects, Bhadarwāhī, being spoken by a much larger number of people, is a lingua franca of these valleys and so exerts considerable influence on Rudhārī.

The Pahārī features of Rudhārī clearly appear in the following:—

(1) the preservation of PI s, as dos "ten", sup "hear", 'solly "mother in law".

- (2) the preservation of PI dental surd after a nasal, of. Rudh. Bhad. dant "tooth", dat "bullock."
 - (3) The future tense in "1" cf.

	Rudhārī	Bhadarwähi
"he will be"	bhòla	'bholo
"he will start"	'cal:la	'calelo

(4) the genetive in "r", cf.

	Rudh.	Bhad.
"of the horse"	'ghorera	'ghoṛ ę ro
"of the man"	mán ∪era	mēņero

In its vowel-system Rudhārī has preserved a pre-Bhadarwāhī stage in the following:—

(1) in the Static Participle: -

		Rudh.		Bhad.
"(h <mark>as or h</mark>	ad) arrived''	' ^or a	'øro
46	,,	gone'	gnora	'jøro
"	,,	eaten"	'kh aor a	'khøro
(2)	in the	Conjunctive Pa	rticiple—	

	Rudh.	Bhad.
"having died""	'marita	'm ęr tã
"having cut"	¹kaṭṭita	'kętt t ā
"having fought"	'larita	'lei'tă

In its consonantal system, Rudhārī (High Rudhārī as spoken by the Rājpūts and Low Rudhārī in general) has preserved the pre-Bhadarwāhī stage of the peculiar consonants and and Khas, cf. the following—

	Rudh.	Bhad, and Khas.
"brown bear"	'bhrabbu	'ḍħļębbu
"brotherless woman"	nı'bh rei	nıqhlai
(a term of abuse)		•
"sleep"	nıddər	$\mathbf{n}_{\mathbf{i}}$
"grass"	traț	flat
"thirst"	trif	ដ្ឋារ

"shoe"	tr ∧ppər	Hypbai t
"three"	trae	ध्रिका
"ringworm"	dadder	βαţ

Grammatically, its relations with the neighbouring Pahārī dialects may be indicated by the following examples:—

(1) "thou art":			
Rudh.	Khas.	Bhad.	Seuți
'ęsi	'Asu	Δs	hã.

(2) "on the horse":—

High Rudh.	'ghoretir
Low Rudh.	'ghorebal
Mid Rudh	'ghoreu r
Khas.	'ghoreti r
S'euțī	'ghoretir
Sundhläsī	'ghorebər
Bhad.	'ghorepur

In vocabulary, its close relation with the neighbouring Pahāṛī dialects may be indicated by the following:—

(1) Numerals.

	Rudh.	Khas.		Bhad.
"one"	ękk	ękk		Akk
"two"	duτ	dur		dui
"three"	trae	्रीवा		fla i
"four"	çəur	caur	Ð	c or
"five"	pang	panc		panc
"six"	lg	ſà		Sa

(2) Sirājī influence may be noted in the deaspiration of consonants in Rudh. hatt "hand", 'hati "elephant", hett "below.".

(3) Interrogative pronouns: -

	Rudh.	Khaś.	Bhad.
"what"	chə	khjə	kuņ
"why?"	ketan	ki	ki

The following shibboleths indicate its relation with the neighbouring dialect Khasālī:—

	Rudh.	Khas
"my"	màra	'mera
"thy"	tòra	'tera
"died"	mariga	'mari gja
"above"	tikker	bấmni
"hither"	'idi	'ìra
"whither?"	kệdi	k ar a
"somewhere"	kęŗkhi	kocch
"but"	pà	par

The following words peculiar to Rudhārī have an interesting bearing on the history of Indian Linguistics:—

'oddna "to roof a house"

àli "egg"

takhu "tear from the eye."

The above phenomena clearly establish the existence of High Rudhārī as a distinct dialect. That it differs considerably from the neighbouring Low Rudhārī may be noted from the following words:—

	High Rudh.	Low Rudh.
"whither"	kệdi	'kudi
"above"	tıkkər	'khara or uppər
"where"	k è ri	kòŗi
"somewhere"	kệi khi	'kute
"in this way"	èmbre	Ĩa

In pronunciation High Rudh. differs from Low Rudh. in the change of 1, 1h into 2, 2h. cf.

	High Rudh.	Low Rudh.
"if"	ze	ìe
"root"	zìl	jìl
"to sleep"	zhulna	'jhulna
'to fall'	'zhaj na	'jharna

In Grammar, the following differences may be noted:-

(!) As noted above, the Locative in High Rudh has the termination tir, but Low Rudh has bal ef.

High Rudh.

Low Rudh.

"on the horse"

'ghoretir

gpoi.epvj

(2) The "potential mood" with the "can" significance in High Rudh has the root bat- or san-, but in Low Rudh. it has Jak-, cf.

High Rudh.

Low Rudh.

"I can be"

λũ bhoĩ 'bʌṭta

aũ bhoĩ '∫akta

or aũ bhoi 'santa

(Rājpūt).

Aũ bhoi 'chanta (Untouchables)

- II. It has been noted above that there are three castes in Rudhār. The speech of each of these castes has peculiarities of its own. And then there are over-lappings, giving rise to many complicated permutations and combinations.
 - (1) Phonetically the following differences may be noted:-
- (a) Intervocalic n in Rājpūt pronunciation remains unchanged, as in 'pani "water," 'khana "to eat," but it has become n in the pronunciation of the Thakkurs and the Meghs.
- (b) Suffixal k and t in the Rājpūt pronunciation remains unchanged, but in Megh-Thakkur pronunciation it varies between g, g, and g, d, d and đ, cf.

	Rājput.	Megg-Thakkur,
"from the horse"	'ghoị eka	ghorega, ga, ga
"on the horse"	'ghoretir	ghore dir, dir or đir

(c) In Megh-Thakkur pronunciation there occurs a peculiar j (soft j as in Russian maja "my") which lightly palatalizes the preceding consonant (for details see below p. 450). But the phenomenon does not occur in Rājpūt pronunciation ef.

Rājput. Megh-Thakkur.

"Mares" 'ghoria ghorja

"(Women) become" 'bhōtia bhōtja

(narrow transcription ta).

(d) For "can" the Rājputs and Thakkurs use the root san—, but the Untouchables use the root shan—, apparently derived from PI ksam cf.

Rājpūt-Ţhakkur. Megh.
"I am'' Aŭ 'santa Aŭ 'ghanta

(2) Grammatically, the following differences may be noted:-

(a) The Subjunctive Mood differs thus:—

Rāj	p ū t	Megh	Thakkur.
"I may be"	bhoũ	bhốt or bhốth	bhon
'I may go'' "I may accomplish	'gaçchã	'gacchã 'keri 'charã	gã Deorile 4 72
"I may accomplish	Kått sa	Káti Envia	'kęri'saŗã

(b) In the Personal Pronoun, the second pers. sg. has the stem tu in Rājpūt and Megh speech, but among the Ţhakkurs it has ti. cf.

	Megh-Rājp ū t	Thakkur
"by thee"	tũi	tī
"to thee"	turan	tran

But while in the 2nd person sg. the Rajpūt and the Megh coincide, in the 2nd pers. genitive plural the Rājpūt is left alone, while the Thakkur and the Megh coincide. cf.

	Rā jp ū t	Megh-Thakkur
"your"	t u'ha ra	tùra
Similarly "its"	ıjara	èra
"his"	tı'ha r a	tèra
"whose"	kı'hara	kèra
"which (of the many	y)" k∪ņzìna	kun'jha

(c) As regards the Past Participle, the Megh-Thakkur participle has "t" more frequently than the Rajpūt correspondent. cf.

	Rājpūt	Megh-Ţhakkur
"washed"	dhoa	'dhota
"drank"	pia	'pita

(d) Similar difference is visible in the Conjuncative Participle, the Rājpūts changing the final a of verbs into e, to which ita is added, the Megh-Thakkur speech keeping the a unchanged. cf.

Rājpūt Megh-Thakkur "having eaten" kheita 'khaita 'ru'jeita ru'jaita

The classification of Rudhari.

The above complications raise a problem for general Linguistics. Is the geographical classification of languages universally applicable? Will not the name of Rudhārī (which is a geographical name) for these caste dialects be arbitrary and misleading? Among which groups of dialects should Rudhārī be classified? Until the caste complications, noted above are explained (a subject for future research), a secure classification of the dialect will not be possible.

May we not provisionally group it along with the Khaśālī dialect? No doubt there are two difficulties in the way of its affiliation to Khaśālī. In the first place, Rudhārī has no neuter gender, while all the other dialects of the Khaś group have it. Thus cf.

Rudh. Other Khas dialects.

"a big serpent" bara sapp bara sapp (masc.)

"a big house" bara ghar barughar (neut.)

Again, Rudhārī has no epenthesis, while the vowel-system of all the other dialects concerned betrays a definite influence of Umlaut. Thus the Rudhārī plural of 'machli "fish'' is 'machlia, while in the other dialects it is is 'mechli (Khaś) or 'michli (Seuțī).

In spite of the above circumstances, it seems to be desirable to group it tentatively with the Khaśālī group, for many of the general features of this group characterise this dialect as well. For instance, (a) in Rudhārī as in all the other members of the Khaśālī group, the oblique of all non-feminine nouns ending in consonants has the suffix a, and of those ending in a has the

suffix e, cf. 'ghorase "with a stone (ghor)" but 'ghorese! "with a horse ('ghora)". (b) the Dative postposition in Rudh., as in all other dialects of the Khas. group is n or ni. (c) in Rudh., parallel to Khas, in the oblique of all nouns and adjectives ending in i, the i is changed into ia or ja, as 'ghoria or 'ghorja "by the mare". (d) Besides the above facts, social reasons seem to require this grouping. For marriage relations between Khāsālī and Rudhārī people are very common, and consequently the interaction between these dialects is quite natural.

The number of speakers.

According to the estimate of the Zaildar of Rudhar, the total number of speakers speaking the various dialects of Rudhari is approximately as follows:—

	Number of speakers	Number of houses
High Rudhārī	400	9 8
Mid Rudh.	100	25
Low Rudh.	100	21

He bases this calculation on the number of houses in which these dialects are spoken, taking four persons as the rough average population of each house.

A description of High Rudhārī.

We shall now take up a systematic description of the dialects.

I. Phonetically, the following phenomena may be noted:—

The vowel-system is simple. The dialect has neither mixed vowels, as in Bhad, nor epenthesis, as in Khas and Bhad, cf.

	Rudh.	Bhad.	Khas.
"four"	cour	gor	çəur
"caps (women's)	' j ujia	' jyj i	'juji
"fishes"	'machlia	'm ęc hli	'męchli
"with elephants"	'hatia-sệĩ	'hethi-seī	'hertra sathi

Besides the back vowels A and a, as in 'cala "start", 'ghara "pot", there occurs, in the Megh pronunciation, the front-vowel a, somewhat like French a, after the peculiar palatalized consonants, (cf. p. 445) as in the following:—

"these things (fem.) were washed"	'dhot;a	('dhotja)
"these things (fem.) were spoken"	boll _j a	('bollja)
"these things (fem.) were drunk"	'pitt/a	('pitja')

Of the front vowels, there occur i, I, e and e but not E cf.

	Rudh.	Khas.
"hair"	ke∫	kej
"belly"	peţ	peţ
"sister"	pęn	bèn

e is a very close e and is pronounced as in English "bed", cf.

"by him" teni
"by whom?" 'keni
"come!" (pl.) 'escha

Diphthongs are of more frequent occurrence in Rudh. than in Khas., in which, in many instances, the corresponding sounds are monophthongs or semi-vowels followed by vowels. cf.

	Rudh.	Khaś.
"servant"	naoker	nokər
"arrived"	'Aora	'ura
"bring!"	nèa	nja
"to her"	t è gn	tjan
"to this lady"	ìan	jani

As compared to Khasalī and Marmatī, Rudhārī may be called A - a dialect, for it has A, a where the other two dialects have e, e, o, o respectively, cf.

	Rudh.	K ha ś	Marm.
"axe"	'makku	'mękku	'mokku
"knee"	z àņu	z≩ņu	zòņu

The high falling tone is significant in this dialect, cf.

	"foot ball"	¹guli
but	"kernel"	gùli
	"eat! (you)"	kha
but	"eat!" (thou)	khà
	"put on"	la
but	"8aw"	1à

- (2) In the consonant-system, the following special features may be mentioned:—
- (a) The suffixal or intervocalic plosives in the Rājpùt pronunciation remain unchanged, but in the Megh-Thakkur pronunciation they are vocalized, as has been illustrated above (p. 414). Even the initial k of the auxiliary verb 'kenna "to do'' becomes g, g or g in the latter speech, cf.

Rājpūt

Megh-Thakkur.

"I am eating" Aŭ khae 'ketta Aŭ khae 'getta, 'getta or 'getta

- (b) Of nasal consonants, **n** sometimes occurs at the end of words, as kun "what "ban, "forest", but in intervocalic position it does not so frequently occur in Rājpūt pronunciation, cf. 'keni "by what "'pani "water".
- (c) The alveolo-palatal fricatives c and c are of common occurrence in the Rājpūt pronunciation, but they are rare in Megh-Thakkur speech, which preserves the original c and c, c.

Rājpūt Megh-Ṭhakkur.

"to graze'' 'aarna 'carna
"any one'' kēc 'kēc
"fish'' 'machli 'machli
"calf'' 'bachru 'bacchu

(d) High Rudhārī has preserved in some instances the palatoalveolar fricative \int for which the corresponding consonant in the neighbouring dialects is velar cf.

	Rudh.	Kha ś.	Bhad.
"Mother-in-law"	'JAJJu	ſę̀χu	ſskh
"poison"	þıſ	bìχ	bıkh

- (e) Like other Pahārī dialects, Rudhārī has changed the initial PI v to b, as in bat "wind", 'bela "time", but in the interior of words the reverse change occurs, b becoming a bilabial s, as babb "father" but 'basian "to the father", 'basia "O father!"
- (f) An interesting phenomenon is the occurrence of significant double consonants as contrasted with merely long consonants, cf.

"he will speak" bôl: la
but "you may speak" bôlla
"he will open" khôl: la
but "you may open" khôlla
"to knead" 'san: na
but "to put, accomplish
or be able" 'sanna.

(g) But the most interesting phenomenon is the occurrence of Palatalized consonants in the Megh-Thakkur pronunciation noted above (p. 444). These consonants somewhat resemble the Slavonic palatalized consonants, and not only the plosives, but also the nasal n and the lateral 1 participate in this phenomenon. Further examples:

"(women) drink" 'pit,a ('pitja) "(women) will speak" bòll_ia (bòllja) "(women) will do" (kèllja) kèllia "(we women) will start" calnjuia (calnuija) "(we women) will speak" bonnjuia (bonnuija) "(we women) will give" dè∪n₁ã (dèunuija).

The n, has a sound somewhere midway between French n and Russian m. The exact description of these consonants, however, is a subject for further investigation.

- (h) As regards the consonant-groups tr, dr, bhr, it has been noted above (p. 441) that High Rudhāri as spoken by the Rājpūts has preserved them. But in Megh-Thakkur speech some words have I, II, and in the examples given above, but even here individuals vary.
- (i) Rudhārī has great aversion to nasality. Nasality in the other dialects of the Khas. group is an incident or often the only indication of the Grammatical Plural number, but in Rudhārī this distinctive feature of plural does not occur in oblique cases of nouns and adjectives, nor has the dialect shown any substitute for this nasality. Thus 'ghore-sei means at the same time "with the horse" or "with the horses", and only the context will show whether one or many horses are meant. In

the nominative plural (fem.) Khas. has zibbā for "tongues", but Rudh. has zibba, without nasality. A striking example of this aversion is man "to the black bean", dative of ma (Skr. māṣa-). In this word the vowel a has absolutely no trace of nasalisation, as it has in English "man".

More details regarding this will be noticed as we proceed with morphology.

- II. Grammatically, the following general points may be noted: -
- (1) Rudhārī, like other dialects of the Khas. group, has a final a in words like 'ghora "horse", 'mara "my", 'kala "black", tia "was".
- (2) Rudh, has no neuter gender, as noted above (p. 446). It has only two genders, masc, and fem.
- (3) Like Bhad, and other dialects of the Khas group, Rudhārī shows distinction of gender even in *personal* pronoun 2nd person plural, cf.

	Rudh.	Khaś.	Bhad,
"you (men)"	tu	\mathbf{tu}	tus
'you (women)"	tùa	tùã	'tùsa

But unlike these dialects, it does not have this distinction in the first person, cf.

	Rudh.	Khaś.	Bhad.
"we (men)"	à	à	8
"we (women)"	à	ã	'Asã

- (4) Rudhārī has no distinction for the plural number in the oblique of nouns and adjectives (p. 450).
- (5) As in other dialects of the Khas. group, the oblique (except the agent case) of all non-feminine nouns ending in consonants has the suffix a, and of those ending in a has the suffix e, (cf. p. 447); thus the instrumental sg. of the word ghor which means "a stone" both in Khas. (including Rudh.) and Bhad. is in Khas. group 'ghora-set "with a stone," but of 'ghora "horse' it is 'ghoreset "with a horse". In Bhad, however, 'ghoreset is

the form in both senses, and only the context will show whether Bhad. 'ghore-sol means "with a horse" or "with a stone". The genitive in Rudh, however, is an exception, which has e in both the senses, cf. Rudh. 'ghorera, which has four meanings—: "of the horse", "of the horses", "of stones".

(6) As in other dialects of the Khas group, the final i of all nouns and adjectives is, in oblique cases, changed into ia. cf.

"thy mare struck me" toria 'ghoria Aŭ 'mara.

"he made a sign with a finger" 'teni 'angulia-seī sart ki

(7) A feature peculiar to Rudh. is the nom. fem. pl. in ia, cf.

"I ate many chupātis":-

Rudh. mî 'baria 'roţṭia khaia Khaś. mî 'beri 'roṭṭi khei Bhad. mî 'meti 'røṭti khei

- III. We shall now describe the grammatical peculiarities in due order.
 - (1) Declension of nouns and adjectives.
- (a) The nominative case of fem. nouns and adjectives ends in ia, correspoding to ia in Hindi and Panjābi, cf. 'ghoria "mares', Khas. 'ghori, Bhad. 'ghøri.
- (b) The agent case sg. and pl. of all nouns and adjectives ends in e, whether the word ends in a vowel or a consonant (cf. p. 451). Thus 'ghore has four meanings:—
- (i) "by a horse" (ii) "by horses" (iii) "by a stone" (iv) "by stones".
- (c) The dative case sg. and pl. has the termination n, Khaś. having ni (as in Curāhī) but Bhad. Jo. If the stem ends in a consonant, preterminational a is added to it, as 'ghoran "to the stone", but if it ends in a simple vowel, 1a, ua or ia is added, cf.

"to the horse or horses" 'ghorian.
"to the oilman or oilmen" 'telien.
"to the man or men! manuan.

If the word ends in a diphthong, the alternation may be noticed from the following examples:—

"to the rain or to the rains" dewan to the crow or to the crows" kawan.

Besides the Dative of Purpose, which has the termination n, the dialect has another dative which may be called "Acquisitive" according to the terminology of (European) classical Grammarians. It is the Dative of use or benefit, signifying "for the use of", "for the sake of". The termination for the Acquisitive in Khas group (including High Rudhārī) is interesting. It is 'kite, PI krte "for the sake of". cf.

"for myself" 'Apne 'kite.

Here, according to the speakers, 'appnan (with the -n dative) will be wrong. cf.

'mîka 'apnekite bi 'pura 'pɛ̃sa nɛ̃i 'ese "I have no money sufficient even for myself."

(d) The genetive has the termination 'era ('era after the feminines in i) for both the numbers and genders, whether the word ends in a consonant or a vowel. cf.

"of the brother or of brothers"

"of the horse or of horses, of stone or of stones"

"of the man or of men"

"of the mare or of mares"

"of the mather-in-law or of mothers-in-law"

"jajjuera

The dialect, in this respect, differs from both Khas and Bhad. cf. the above with the Khas, and Bhad forms:—

	Khaś.	Bhad.
of the brother"	bhrara	'dhlaero
"of brothers"	'bhrar a	'dĥļākero
"of the horse"	'ghorera	ghorero
"of horses"	' gho r er a	ghor akero
"of stone"	'ghorara	ghorero

^{*}cf. Paley: Euripides (1874) Vol. II, p. 16.

"of stones"	'ghoṛa r a	'ghoṛākero
"of the mare"	'ghoria r a	'ghøre ro
"of the mares"	'ghoriara	'ghørikero
"of the mother-in-		

Jèxuara

(e) In High Rudhari, as in the other dialects of the Khas. group, there are two cases -the Ablative and the Allative1 (the "near" case) - which have the same termination ka, thus 'gharaka means "near the house" and als) "from the house." In Bhad, however, only the Allative has ka, the Ablative having 'kerā cf. Bhad.

'sikkhākero

"near the house" 'gharekà but "from the house" 'gharekerã

The Allative case is also used in connection with the verb 'milna "to meet." e.g.

"Finally" all the brothers came and met Rāma": -'pAtta 'sare bhra ramka 'eschita 'mile. Here 'ramaka is Allative, lit. meaning "near or approaching Rāma," and is used in connection with the verb 'mile "met.''

The following interesting sentence, in which both the Ablative and the Allative cases are used, will illustrate the difference between them-

"I am afraid of going near Rāma":-

Rudh. Aŭ ramaka ghechneka 'darta

Bhad. Aŭ 'rameka 'ganekera 'darta

Here Rudh, has ka in both cases, Bhad, has ka in the Allative. kerā in the Ablative. The Allative is also used in the sense of possession e. q.

"My brother has a hundred Rupees."mare 'bhajjeka ekk Jao re'pajje esen

(f) The Elative or "out of" case is signified by the postposi-

tion mata among the Rajputs and maga among the Meghs and Thakkurs cf.

^{1.} Vide Eliot's Finish Grammar, P. 145.

Rajpūt

Megh Thakkur.

"out of the well"

khuija mata

khuij**a M**ãga

In Bhad, the corresponding postposition is màzera or simply 'era, e.g. khùe-màzera or khuera "out of the well."

(g) The Locative proper has among the Rajpūts, the postposition tir, but among the Meghs and Thakkurs it is dir. dir or δ ir, cf.

Rājpūt

Megh-Thakhur

"on the horse"

ghoretir

'ghoredir, dir or fir.

(h) As in other dialects of the Khas. group and in Bhad., there occurs the "down-from-up" or Delative case. The post-position used in this sense is thra or tra (in fluent speech). In slow speech the postposition used is thra of.

"he fell down from the horse":-

të 'ghoretira 'khirki ga.

"Come down soon from this tree":-

- e 'buttatira txole 'eggha.
- (i) As in other dialects of the Khas. group, there occurs a case which may be called "Directive" case, though in another paper "the Dialects of the Khasālī group" (unpublished at the moment of writing these lines) I have called it the "prepositional dative". The former name, however, is more appropriate, as it better gives the sense of the case. When direction is implied, many of the above cases get an additional postposition n "towards". Thus the following forms of the Directive arise:—
- (i) Allative Directive (ii) Locative Directive (iii) Illative Directive (iv) Relative Directive.
- (i) Allative Directive. In the sense of "towards near", the Allative Directive is formed by the addition of the dative postposition n to the postposition ka "near",—the whole postposition being kan (Rājpūt), gan, gan or gan (Megh-Thakkur), e.g. "ghorekan "towards-near the horse".

^{1.} Vide Eliot's Finnish Grammar, P. 155.

So Rudh. 'ghorian 'cala and 'ghorekan 'cala have a shade of difference. The former means, "he moved towards the horse," the latter, "he moved towards near the horse", his object being not only to direct himself to the direction of the horse, but also to approach it. In Bhad. also the same sense is indicated by the postposition 'kajo, e.g, të ghore kajo 'galo "he moved towards near the horse'.'

(ii) Locative Directive. In the sense of "towards-on" the Locative Directive is formed by the addition of the Dative postposition n to the Locative postposition tir. with a connecting vowel g between, i.e. tirgn "towards-on". Rudh. (and the other allied dialects of the Khas. group) will not allow an idiom like "came upon" before the coming is finally effected; it would require "came towards upon" (tirgn) in this sense. The following High Rudh. sentences will make this difference clear:—

'dharatır deo a

"The rain has come (lit. came) upon the mountain'. Here the rain has actually reached the mountain, and so the ordinary termination tir is used.

'dharatıran deo 'norase

"the rain has come towards upon the mountain".

Here the rain has not yet reached the mountain, and so tirgn is used. The tense "has come" is here equivalent to "has started for".

- (iii) Illative Directive. In the sanse of "towards-in" the Illative-Directive is formed by the addition of the Dative postposition n to the Illative postposition mā—the whole postposition being mān, cf. tē' phata māta 'khadda mān 'khīrka "He fell from the hill towards in the stream'. The "towards-in" suggests his direction towards the stream before he is actually in it.
- (iv) Relative Directive. In the sense of "behind-towards" the Relative Directive is formed by the addition of the dative post-

^{1.} Vide Eliot's Finnish Grammar P. 162.

position n to the post-position 'patti "behind"—the whole post-position being 'pation "behind towards." cf.

të mare 'bhrapatian 'daura

"he ran behind towards my brother,"

sie 'gauwapatian jhapp 'ditti

"the leopard pounced behind towards the cow."

(i) As in the other dialects of the Khas. group, the Prolative case occurs in the sense of "over" and the postposition 'tikre is used in this sense, cf. the difference:—

'ghore tikre 'makhi 'udre 'ketti

"the fly is flying over the horse"

but 'ghore tır 'makhi 'bıffuri

"the fly is sitting on the horse."

(k) As regards the declension of Adjectives, masculine adjectives ending in a are not fully declined in all the cases. In oblique cases, as in Hindi, the final a is changed into e, e. g., cf.

'rora manu "good man"

but i 'rore manuan 'bolla "speak to this good man."

Feminine adjectives ending in i change the final i into ia in oblique cases, cf.

'rori 'kuri "good girl"

but la 'roria 'kuria 'bolla

"speak to this good girl."

All feminine pronominal or possessive adjectives participate in this declension. cf.

tòria 'ghoria ati 'mara

"thy mare struck me."

mària 'Ammã Aũ 'mara

"my mother beat me."

'rameria 'ghoria mian du'latti 'ditti

"Rāma's mare kicked me."

razeria malia mian bolla

"the king's mother said to me."

(1) The Definite Article. There occurs in the Dialects of the Khas group a form of the pronominal adjective ending in -zina (Rājpūt) or -jha (Megh-Ţhakkur) in High Rudhārī. The sense of this zina or -jha somewhat corresponds to that of the Definite Article in English. cf.

buddazına 'kedi ga "whither is the old man gone?"

Here buddazina refers to the old man of the house, or the old man already mentioned. Similarly

boddizmi 'kedi gei

"where is the old woman gone?"

chelluzma 'cali pja

"the kid (already mentioned in the story) started"

'bhedruzine 'cali gee

"the sheep (already mentioned) went away."

(m) The declension of numerals in oblique cases is somewhat irregular. cf.

ekk	'ekki seî	"with one"
dui	'duĩ seĩ	"with two"
trae	treĩ seĩ	"with three"
19	Jei sei	"with six"
satt	'satta seî	"with seven"
nao	'nauwa seî	"with nine"
bì	bìa sel	"with twenty"
JAO	Jauwa sei	"with a hundred"

- (2) In the declension of Pronouns the following features may be mentioned:—
- (a) The gender in the personal Pronoun 2nd person Plural has been already pointed out (p. 451).
- (b) The genitive Personal Pronoun 1st and 2nd person sg. is peculiar:—

	High Rudh.	Khas.	Bhad.
"my"	màra	'mera	'mero
"thy"	tòra	'tera	'tero

plu ; equentative (c) As in Khas., the stem of the 1st person à - e. a. -ticiple "we" à "our" àra ãka "from us" "on us"

In the forms of the Demonstrative Pronouns there are variations among some villages. In Bilandpur the pronouns are

"this" i (very near) (less near, but visible) "this" е (distant but visible) "that" u "he or that" (distant and invisible) tè

ātır

In the village Kharaoth, however, neither i nor u occurs. or u is used instead.

As in Khas., the word for "his" and "her" is the same, viz., tera (Thakkur), tı'hara (Rājpūt).

- (3) In Conjugation, High Rudhari has the following notable features:-
- (a) The Verb Substantive has an interesting form 'esi "thou art," so much resembling the corresponding Sanskrit (Homeric) Greek forms. The only modern Indian language with a similar form is Bashgall, which has esi. A comparison with the neighbouring dialects will show the distinctive features of the Rudhārī Verb Substantive:-

	,	H. Rudh.	Khas.	Bhad.
Singular	1.	¹ęsã	'asã	ęĩ
	2_{\bullet}	'ęsi, ęsī, ısi	'Asu	ΛS
	3.	¹êse	'Ase	дe
Plural	1.	'esu	'Asũ	Am
	2.	'esa	'ASũ	Ath
	3.	'ęsən	'Asũ	An

(b) The terminations of the Present Indefinite Tense are simple: sg. ta (masc.), ti (fem.; pl. te (masc.); the fem. pl. has a peculiar tia (Rājpūt), t,a (Megh-Thakkur), cf.

(1) Thy become":-

Khas A. Rudh. 'bhotia (Rājpūt) 'bhot,a (Megh. Thakkur)

Khas. bhaoti
Bhad. bhocen

Verbs ending in a vowel have a nasal final of the stem in this tense. cf.

	H. Rudh.	Bhad.
"I eat"	k hãta	khatā
"I drink"	'pĩta	'pitã
"I become"	'bhōta	'bhotã

- (c) As in other dialects of the Khas. group, there is a rich variety of Tenses, with delicate and specific shades of meaning. Besides the Present Indefinite Tense, there occurs the Durative, which is of 3 kinds:—
- (i) Incipient Durative. This indicates that the action is either just going to occur, or its early stages have just started. It is formed by adding the Verb Substantive to the present participle. cf.

Aŭ 'zhulta 'esa "I am just going to sleep, or I am napping, overpowered with

sleep.''
but Aü 'zhulta "I sleep

"I sleep" — indefinitely with reference to time or place.

Aŭ 'kasri 'bhota 'esā "I am getting ill."

Aŭ 'khāta 'esā "I am about to take my meal, or,
I have sat down to take my
meal."

(ii) Imperfect Durative. This indicates that the action has passed the incipient stage, but is yet incomplete. It is formed by adding the present participle of the verb 'keana "to do." cf.

Aũ khae 'ketta "I am eating''
Aũ 'kere 'ketta "I am doing''

Aũ gà cche ketta "I am going".

(iii) The continuous Durative. This has a frequentative or habitual sense. It is formed by adding the present participle of rana "to keep, remain" to the present participle of a verb. cf.

tè seda khāta rāta "he is always eating."

(d) The present and the past Perfect are formed from the Static Participle:—

aŭ 'kasri 'bhura 'esã

or Aŭ 'kasri bhoi 'gaora esã

"I have become ill."

tè gaora thia

"he had gone."

(e) As in other dialects of the Khaś. group, there is a Pluperfect, which is formed by 'Atthi "had been", which is used either independently, as

tè man tệri 'Atthi "that man had been there." or as an auxiliary, e. g.

tè serap pie 'ketta 'Atthi "he had been drinking wine."

A notable feature of this 'atthi is that it is unaffected by gender and number. Thus it remains the same whether the subject is masc. or fem., sg. or pl. cf.

tè man tèri 'Atthi "that man had been there.''
tè zonan tèri 'Atthi "that woman had been there.''
'teni 'bAre cor 'mari 'sAore 'Atthi

"he had killed many thieves."

'teni 'b^ria zenania 'mari 'sAoria 'Atthi

"he had killed many women."

It is used only in the 2nd and the 3rd person, not in the 1st person.

It necessarily implies the absence of the subject at the time or place referred to by the speaker.

'dera iri 'Atthi "the camp had been here," implying that "the camp now is not here."

afi têrî ga tə tə 'agru têri 'atthi

"he had been there before I had reached there."

boll "sav!" "(he) said" bòlla "to do" kenna 'ketta (Rājpūt) "he does" 'getta (Megh Thakkur) kere "he may do" kèrla (Rājpūt) he will do" kella (Megh-Thakkur) "do" ker "(he) did" kia 'sanna \ "to put, to finish. to be able" (generally an auxiliary in the perfective sense). 'channa' keri satta (Rājpūt-Thakkur)} "he finishes off" chanta (Megh) 'keri sae (Rājpūt) "he may finish off" 'sAre (Thakkur) chae (Megh) 'keri sàlla (Rājpūt-Thakkur) "he will finish" chàlla (Megh) 'keri s∧r (Rājpūt Thakkur) ļ "finish off!" char (Megh) 'keri sa (Rājpūt) "(he) finished off" cha (Megh) 'sAra (Thakkur)

- (j) Besides the above moods and tenses, the following compound verbs are a special feature of Rudhārī, as of the other dialects of the Khaś. group:—
- (i) The Past Conditional. The peculiarity consists in the optional use of tia (Rājpūt) or thìa (Megh Thakkur) cf.

ze Aŭ ìri 'bhốta tia tə tã 'razi bhoī gàta tia or ze Aŭ ìri 'bhốta tə tã 'razi bhoī gàta

"if I had been here, I would have recovered."

Note the peculiar use, in protasis and apodosis respectively of bhota tia-gata tia (Rājpūt)

'bhốta thìa — gàta thia (Megh Thakkur)

(ii) The Contingentive or "Probable-mood" is a type of the Past Conditional, in which both the protasis and the apodosis are formed from the Static Participle, and the apodosis indicates

a stronger probability than in the case of the ordinary Past Conditional of.

Aŭ dewa pi gaora ta razi bhối gaora

"If I had taken medicine, I would have (probably) recovered".

(iii) The Dubitative or "Perhaps mood?" is another variety of the Subjunctive. It is used with the participle 'zeni "perhaps'.

It is formed by the addition of the auxiliary this to the Subjunctive, irrespective of gender, number or person. It is used only in the Past or the Present, not in the Future sense. cf.:

'zeni te manu 'honnia 'razi bhoi gache thi

"Perhaps the man may now recover".

'zeni tè zenan hi; 'razi bhoi gàcche thi

"Perhaps the woman would have recovered yesterday."

- (k) Of the Participles, the following may be noted:—
- (i) The Present Participle. Its form is the same as that used in the Present tense, the verbs with a final vowel having a nasality at the end. cf.

'bhōta "becoming''
'khāta "eating''
'pīta "drinking''
'marta "dying''
'botta "speaking''
gàta "going''
'ketta "doing''

e.g. i 'mațiha mĩ kadî 'kasri 'bhốta nếi là

"I never saw this boy becoming ill".

- (ii) The Past Participle. This Participle, which serves as the Past Indefinite Tense, has the following features:—
 - (x) Monosyllabic forms like

a "came"
ga "went"
sa "finished"
ba "sown"

(y) tia "was" in Rājpūt and occasional Megh pronunciation.

```
(z) The greater frequency of t in Megh-Thakkur pronuncia-
tion, cf.
     'pita
           (Megh-Thakkur) "drank".
                                        Rājpūt pia
     'dhota
                             "washed"
                                               dhoa.
     Some more examples: -
             "became"
     bhua
                                 pea
                                        (Rājpūt
             "said"
     bàlla
                                 poq
                                          Thakkur)
    kha
             "ate"
                                 drtta
                                                     "gave".
             "delivered"
                                                     "brought".
    za
                                 niq
            "was born"
                                                     "died"
    'Z^rma
                                 mua
            "won"
    'zita
                                 là

     kıura
                                        ,,
```

{ 'kvttura (Rājpūt) " cut'' 'b\ddura(Megh-Thakkur) " cut''

As in other allied dialects, the Static Participle is also used in the Absolute sense, cf.

'bana 'gaore tè dui bàri bhue

"it is two years since he went to the forest"

'mî 'pani prure ekk 'ghari bhui

"it is half-an-hour since I drank water"

(iv) The Conjunctive Participle represents a vowel-system which indicates a pre-Bhadarwāhi stage, for the latter has epenthesis where the former has two vowels, each in a different syllable (cf. p 3).

,	Rudh.	Bhad.
"having died"	'marita	'mertã
"having sit"	'kațțita	¹kęţţã
"having started"	'calita .	'celtã
"having reached"	'puzzita	'pyztã

When verbs end in a vowel, the final vowel is nasal cf.

'pīta "having drunk''
rũita "having implanted"
'bhoīta "having become''

If the verb ends in a, the Rājpūt speech changes the a into e, but in Megh-Thakkur speech a remains unchanged cf.

	Rājpūt	Megh-Thakkur
"having eaten"	'kheîta	'khait a
"having délivered"	'zeîta	'zaîto
"having put on"	'leita	¹laîta

(1) The Causatives are formed by the addition of a, with the necessary vocalic changes, as prana "to make drink," khuana "to feed."

In some verbs l is further added, as in

zul'hlana "to make to sleep''
nu'halna "to make to bathe''

(i) A special feature of Rudhārī and the allied dialects is a compound causative passive participle in the perfective sense, cf.

mī 'mattha zul'halaī sha

"the boy was made to sleep by me," the act being finished.

Similarly: -

rujai sha "was irritated"
khuai sha "was fed"
cəluai sha "was made to start"

nuhaluai sha "was made to bathe."

(ii) Causative conjunctive participle is formed by the abovementioned rules, cf.

khuàita "having fed"
nuha'laita "having made to bathe"
ce'laita "having made to start"
pı'aita "having made to drink"

(iii) Causative Past Participle is simple. It ends only in a (masc.) cf.

pia "made to drink"

khua "fed"

zulha'la "made to sleep" nuha'lha "made to bathe'' cə'la "made to start''

bol'la "called"

ma'ra "made to beat"

This formation gives interesting doublets: -

mī tē 'mara "I beat him"

but mi tè ma'ra "I got him beaten"

'bakra 'cala "the goat started"

but mī 'bakra 'gharan cəla

"I started the goat for home."

(m) Denominatives, intransitives as well as transitives, are another interesting feature of Rudhārī as of other allied dialects of.

Intransitive		Transitive	
'ucc9na	"to be high"	uc'cerna	"to make high"
1/mm9na	"to be long"	lam'merna	"to lengthen"
'rorona	"to be good"	ro'rerna	"to improve"

Intra	nsitive	T	ransitive
'shittona	"to be white"	chrt'terna	"to whiten"
'kalena	"to be black"	ka'lerna	"to blacken"
'm^ndhonã	"to be bad"	man'dherna	"to aggravate"
'nık r 9na	"to be small"	nık'rerna	"to make small"

(n) The Potential mood with the "can"—significance (of. p. 444) has two roots, viz., bat - or san - (Megh shan-) of.

Aũ 'keri 'bAţta

,, ,, 'sAtta (Rājpūt)

,, ,, 'ghAnta (Megh)

,, ,, bAţna

,, ,, sAnna (Rājpūt)

,, ,, 'ghAnna (Megh)

"I shall be able to do"

Note that in Bhad, the root used in this sense is bat-, in Low Rudh. Jak- (cf. p. 444).

(o) The Passive voice, as in other dialects of the Khas. group, is synthetic. It is formed by the addition of \tilde{o} , (h \tilde{o}) to the root, as 'marota "I am beaten". It is also optionally quasisynthetic. In this case it is formed by the addition of participles from 'gagghna "to go', cf. 'maroj gata "I am beaten".

The synthetic form can be declined in all the Tenses and Moods, as the following examples will show:—

"I am eaten" khañwā
"I was eaten" khañwa
"I shall be eaten" khañwona

The Passive in Rudh, as in Khas. group, is "Absolute Passive" because both the agent and the subject of the action are here felt as Passive, having absolutely no control over the action. The English sentence "I am beaten by him" cannot be translated in the Passive form into Rudhārī, because the Rudhārī Passive is beyond the control of the agent. This Absolute Passive, however, can be used for such a sentence as "Look here! I am beaten" here! Aŭ marõta. Here the fact of being beaten is said to occur independently of the agent. If the agent is mentioned at all, the Ablative, and not the Instrumental case, is used, cf.

teka Aŭ 'maro, ta "can l be beaten by (lit. from) him?" Here the Ablative indicates that the so-called agent is no agent at all; at the most he may be a medium through which the action may independently proceed.

This Absolute Passive is often used in the involuntary sense cf.

'mika jərap 'pıõõta

"Wine is (involuntarily) drunk by (lit. from) me."

Similarly:--

'mika zhullua "I slept involuntarily". lit. "It was slept from me".

Even the verb 'bhona "to be" takes this Absolute Passive, as it does in Sanskrit. cf.

tè 'appu razi bhouyra ('bhura being the active form) "he was cured spontaneously", lit. "he was become healed by himself."

tore bonne-sei aŭ cor bhaoota

"can I be a thief with thy .telling?" lit. "Can I be become thief with thy telling?"

(p) For the future Passive participle the Infinitive of the Absolute Passive is used:—

```
"to be become"
bhaõgna
                "to be washed"
'dhaõona
                "to be said"
'bollona
                "to be eaten"
khaõgna
                "to be delivered"
zaõgna
                "to be born"
zArmona
                "to be won"
'zitona
                "to be implanted"
rugna
                "to be drunk"
'pıõ9na
                "to be gone"
'gachona
                "to be laid"
¹pjeõgna
                "to be brought"
nječona
                "to be dead"
'mArgna
kAttona
           (Rājpūt)
                               "to be cut"
baddhona (Megh-Thakkur)
                "to be arrived"
echona
```

bilgna "to be seated" "to be fought" 'largna marqna "to be beaten" "to be grazed" garqna "to be boiled" kàr 9na zalona "to be burnt" "to be evaded" 'talona "to be brought up" 'pal9na

Note some Causative forms of these Passive infinitives or Future Passive Participles:—

'pjaõ9na "to be made to drink" kh'uaõ9na "to be made to eat"

zaromagna "to be made to be born i. e. to be made to be begotten"

ru'Jaogna "to be irritated"

zu'laõgna "to be made to sleep" nu'halgna "to be made to bathe" bol'laõgna "to be made to say"

ma'raogna "to be made to be beaten."

- (q) For the Causative Passive participle in the perfective sense as zulhalaï sha "was made to sleep" see p. 467, (i).
- (r) The Absolute past Passive participle is another peculiarity of Rudh, and other allied dialects. cf.

khadwa "was eaten involuntarily or with difficulty"

but kha "was eaten"

pruya "was drunk involuntarily or with difficulty"

but pia "was drunk"

dhoùua "was washed involuntarily or with difficulty"

but dhoa "was washed"

kerua "was done involuntarily or with difficulty"

kia "was done."

The intransitive forms of this participle are also used in the impersonal sense, for which see below (p. 472).

(s) The Absolute Passive has also a Static participle, of bhodyra "(has or had) been become"

tè appu 'razi bhoù yra "he recovered spontaneously" khaù yra "(has or had) been eaten"

kal 'mika 'masa krá khadyra

"Yesterday I could eat pudding with difficulty," lit. "pudding had been eaten from me with difficulty." dhoùurd "(has or had) been washed" pruura "(has or had) been drunk"

(t) The Absolute Passive has also a compound participle in the perfective sense, the Causitive passive form of which has already been mentioned (p. 471, (q)). cf.

bhoùuiga "was become spontaneously"

'mattha 'appu 'razi bhoù y ī ga

"the boy was cured spontaneously"

bolluï ga "was said spontaneously" 'khaŭyī ga "was eaten spontaneously"

'zʌrmuī ga "was born spontaneously"

piuui ga "was drunk spontaneously"

(u) The Denominatives also have an Absolute Passive form cf. uccaoqna "to be made tall"

i 'maṭṭha uccʌõona muʃkəl ese

"This boy can be made tall with difficulty". Similarly

chittaoona "to be made white"
roraoona "to be improved"
mandaoona "to be aggravated"
lammaoona "to be made tall"
kalaoona "to be blackened"
nikraoona "to be made small"

- (v) The Impersonal, which occurs in Rudh as in other allied dialects, can be studied under the following heads:—
- (t) Absolute Passive Impersonal (ii) Non-objective Impersonal (iii) Non subjective Impersonal (iv) Categorical Impersonal.

(i) The Absolute Passive Impersonal is often a past participle formed from Intransitive verbs, cf.

mika	hasya	"I laughed involuntarily	y'' lit.
	"it was la	ughed from me involunta	rily"
**	'zullya	"I slept involuntarily	,,,
,,	pjęÿa	'I lay "	
,,	gachua (Rājpūt)	"I went ,,	
"	ghua (Thakkur)	"I " "	
"	'khırku a	"I fell ",	
,,	ndssua	"I ran "	
,,	h∆llua	"I moved ,,	
97	'p∪zzya	'I reached ,,	
19	'echya	"I came ,,	

(ii) The non-objective Impersonal is a quasipassive (i.e. the ordinary) past participle and has no reference to any particular object. Thus

```
mī pλṛa "I read''
mĩ cλkha "I tasted"
```

Here "I read" refers simply to the act of reading, and may be translated "I did reading".

(iii) The non-subjective Impersonal corresponds to English "it rains", "it thunders". cf.

```
'gurkne 'laora "it thunders''
'sine laora "it snows''.
```

- (iv) The "cateogrical" Impersonal in the Imperative sense corresponds to Hindī cāhiye, and is translated as "ought to". It is formed from the root 'ler "to require", e.g. ae têri 'gaora 'lorta "we ought to go there", lit., to us there become-gone needs".
- IV. Syntax. The syntax of the various grammatical forms has been discussed above under their respective heads.

But the concord in Rudhārī, as in other allied dialects of the Khas group is peculiar. The past tense always agrees with the subject in these dialects, and is not used impersonally. cf.

mī dedd puchi "I asked sister" but cf. Hindi mai ne bahin ko pūcha.

Again of. 'rame Aŭ mara "Rāma struck me' but Hindī ram ne mujh ko mārā. In the Rudh. sentence Aŭ is the nominative case.

While in Rudh, the verbs 'puchi and 'mara fully agree with their subjects, in Hindi these verbs are impersonal in the sense that they are independent of the gender or number of the subject.

HERODOTUS'S ACCOUNT OF TWO STANDARDS OF MEASURE OF ANCIENT PERSIA COMPARED WITH THE ACCOUNTS OF OLD PERSEE BOOKS.

By Dr. Sir Jivanji Jamshedji Modi, C. I. E, Ph. D. introduction.

"It is with a feeling of gratitude for having been permitted to finish a work extending over thirty years that, after writing this Preface the pen will be laid down". (Grierson in his Preface of Volume I, Part I (1927) p. 1).

While reading the above words of Dr. Sir George Grierson written at the close of his Monumental work, relating to India, I am reminded of the following words of Firdousi (about 941—1020 A. C.) at the close of his Monumental work of the Shah-Nameh relating to Persia, uttered about 900 years ago.

Sî ô panj sal az saraye sepanj

Basî ranj bordam ba ûmid-i ganj.

"I bore a good deal of trouble for 35 years in this transient world in the hope of (being rewarded with) money".

Firdousi died disappointed at want of appreciation of his work at the hands of his King. Dr. Grierson has the satisfaction to see, that his monumental work is appreciated not only by his sovereign, but by an admiring number of scholars. Firdousi's work was in a different line. Sir George Grierson's work is in a different line but it also includes (Vol. X) a linguistic survey of the languages of the Iranian family of Firdousi's Persian. Firdousi wrote his last line with a broken heart. Grierson has written his last lines with "a feeling of gratitude", gratitude towards God,

⁽¹⁾ Macan's Calcutta Edition, Vol. IV, p. 2095.

who inspired him, and gratitude towards all, who helped him. The present Volume, for which this paper is written, is an expression of the gratitude of Indian scholars towards Sir G. Grierson, and, it gives me great pleasure to be associated with this work. expressive of gratitude. Sir George Grierson's name has often come to my lips in some other directions. When I occasionally cast a glance on the past work of my dear Anthropological Society of Bombay, of which I am a member since its very foundation, and of which I was the Honorary Secretary for a long period of about 30 years, I remember him as a past-President of our Society. When I occasionally cast a glance on the past work of my dear Bombay Branch of the Royal Asiatic Society, of which I have the pleasure and honour of being the President to-day, I think of Sir George Grierson as the Honorary Fellow of the Society and as the recipient of its Campbell Medal, in the Committee of the selection of which I had the pleasure of acting. All these associations and thoughts and to the pleasure of doing honour to one who has served India well.

OBJECT OF THE PAPER.

The object of the paper is to present a Note upon old Iranian standards of weight and measures, as described in the writings of Herodotus in old Iranian books.

ARTABA.

Herodotus, while speaking of the power of the Babylonian Empire says: "Whereas there are twelve months in the year, the Babylonian territory provides him (the King) with subsistence for four months and all the rest of Asia for the remaining eight; thus the territory of Assyria amounts to a third part of the power of all Asia, and the government of this region which the Persians call Satrapy, is considerable; since it yielded a full artaba of silver every day to Tritdechmes, son of Artabazus, who held this district from the King; the artaba is a Persian measure, containing three Attic chaemices more than the Attic medimnus".

⁽¹⁾ Herodotus Book I, 192. Cary's Translation (1889) p. 83.

Sir J. Gardner Wilkinson gives a table which helps us to know the weight of an artaba. He says:— "This (artaba) is the same name as the Artab of modern Egypt and, like the medimnus, is a corn measure. The artab is nearly five English bushels and contains 8 med. This too is the Latin Modicus, which last was equal to one-sixth of the Greek medimus. But ardaba differs in quantity from the artaba".

- 1 Medinus = 48 chaemices or 6 Latin modii.
- 1 Madius = 8 chaemices.
- 1 Artaba = 51 chaemices.
- 1 Artaba = a little more than 61 modii.
- 1 Modicus = nearly 1 peck English.
- a artaba = $1\frac{3}{4}$ bushel.

When Herodotus gives us an artaba as a standard of measure corn, in the Avesta we find denare as a measure of weight. It is danar in Pahlavi, dinar and danar دينار or دينار or Persian. According to Anquetil du Perron, a dinar is equal to 4 tolas. Now, as one tolla is equal to 175 grains, 1 dinar (danare) comes to $4 \times 175 = 700$ grains.

According to Mr. Harlez also, a danaré comes to 700 grains. He speaks of adamire as "measure de capacité ou de poids dont la base est une certaine quantité de grain. Elle parrait peser environ 700 grains".²

Now one artaba, as given in the above table, is 1½ bushels. For bushel, we find the following table in our modern books of arithmetic:—

7000 grs. = 1 pound

10 pounds = 1 gallon.

8 gallons = 1 bushel.

- (1) Vendidad XVI 7; Le Zend Avest, Tome I, Partie II, page 398, n. 1.
- (2) Avesta, Livre sacré du Zoroastrisme 1881. Translation: It is a measure of capacity or of weight of which the base is a certain quantity or grain. It appears to weigh about 700 grains.
 - (3) Cornwell's Arithmetic,

So 1 bushel is equal to $8 \times 10 \times 7000 = 560000$ grs. and 15 bushels = 980000 grs.

Thus the Avesta danare which contains, as said above, 700 grains, is in the part of an artaba. In other words, 1 artaba = 1400 danares. A danare, therefore, seems to be a very small measure.

Parsang a Measure of Distance.

Herodotus thus refers to a measure of distance in connection with a road in Persia: — "There are royal stations all along, and excellent inns, and the whole road is through an inhabited and safe country. There are twenty stations extending through Lydia and Phrygia and the distance is ninety four parsangs and a half". (Bk. V 52).

The paresang of Herodotus is the parsang of Pahlavi and farsang فرسنگ of Persian. In the Zand Phalavi glossory, a parasang or farsang is said to be "a measure of one thousand foot marks" (hazār gāmi do pāe)¹

According to Herodotus, "the parasang is equal to thirty stades" (Bk. V, 53). A Greek stade is one furlong. So Herodotu's parasang is equal to 30 furlongs.

Sir George Rawlinson says that the above figures of Herodotus were correct Greek figures. According to Strabo, some took a parasang to contain 49 stades or furlongs and others 60.

Herodotus seems to be right in taking a parasang (farsang) to be 30 stades or furlongs. He is supported by the Phalavi Zâd-sparm where a farsang is taken to measure 20000 ft. and 20000 ft. come to about 30 furlongs.

ACCENT IN TELUGU SPEECH AND VERSE.

(Mr. G. V. Sitapati B. A. L.T. Lecturer, Rajah's College, Parlakimedi, Madras Presidency.)

My object in contributing this article is to show that there is in Telugu, what is commonly known as accent and that it plays a significant part not only in Telugu Speech but also in Telugu Metres. It may look strange to students of Linguistic Science that I should make an effort to prove what is, after all, a natural characteristic feature of any spoken tongue. "Only a machine" says Prof. Blackie¹ "could produce a continuous series of sounds in undistinguished monotonous repetitions like the tum, tum, tum of a drum; a rational being using words for a rational purpose to manifest his thoughts and feelings necessarily accents both words and sentences in some way or other." But many Telugu scholars do not seem to have recognised the presence of accent in The failure to recognise it is the result of a their own speech. prejudice against the spoken tongue. About eighteen years ago, when the Government of Madras accepting the views of the Modern School of thought recognised the spoken Telugu as a proper medium of instruction in all the Educational institutions, a monster memorial presented by the conservative was Academy to the Government, in the name of Telugue Telugu population, praying " Classical" that and not "Modern" Telugu should be the proper medium of The leaders of the "Classical" school declared in instruction. that memorial: -- "The Telugu of Nannaya of the 11th century is not different from that of Rao Bahadur K. Veeresalingam Pantulu of to-day. The language of the one is the same as that The same rules of grammar, rhetoric and prosody of the other. govern both. It is, therefore, wrong to say that the literary

^{1.} Place and power of Accent in Language in the Transactions of the Royal Society of Edinburgh 1871—quoted in Encyclopædia Britannica Vol. I. pp. 80—81.

language is archaic or antiquated as the few advocates of the In the opinion of the Modern School represent it to be." leaders of the "Classical" school, the Telugu language has undergone no change and has, therefore, no history; and the rules of the old Telugu grammars govern or must govern and fix the Telugu language for ever! But these grammars as Rao Bahadur K. Veeresalingam Pantulu stated in his autobiography (Vol. II. p. 156) treat only of the ancient poetic dialect and were prepared before the cultivation of the Telugu Prose, spoken dialect was not the subject of study for the grammarians, the question of accent did not arise. The opinion of the classical school prevailed and thanks to the influence of its leaders, the Government of Madras had to withdraw its recognition of "Modern" Telugu and the Syndicate of the University of Madras announced that "it is not at present in a position to recognise what is known as Modern Telugu for University purposes." The very idea of accent in Telugu is not, therefore, appealing to advocates of the classical school; in the first place, it refers to the spoken tongue that deserves no study; and in the second place. it was not noticed by the old grammarians and it is, therefore, a foreign product that should be boycotted!

Nevertheless, there is accent in Telugu. It may not be so strong and distinct as in English. "That the accentuation of some languages is more distinct, various and effective than that of others is beyond question but there are, none so far as we know, in which its power is not felt. The statement sometimes made that the French have no accent in their words can only mean that their accent is less emphatic or less variously so than that of certain other nations. If it means more; it is not merely an error but an absurdity." The same may be said of Telugu.

Ordinarily it is the first syllable of a word that has the main accent as in 'paleke (a plank or slate), 'veduru' (bamboo).

^{1.} The modern school has, since then been steadily making progress and gaining strength in the Telugu country.

^{2.} Encyclopædia Britannica Vol. I, p. 81.

^{3.} The medial d as in this word is more a fricative than a stop.

'sagemu (half) 'enimidi (eight). In words of more than four syllables, which are generally compounds, the secondary accent may fall on the prominent syllable of the words or particles that enter into the compound. The ordinary man is not conscious of the composition of the word but nevertheless accentuates as accurately as the grammarian. Ex. 'mage tauemu (manliness), 'telusu'konu (to know), 'velikilə padu (to fall flat on the back). In polysyllabic words which are not compounds, the secondary accent is rarely noticed. palu kuduru, may mean 'they speak or say' or 'the arrangement of teeth', but the difference in meaning is brought out by accentuation. In the former sense, it is 'palukuduru and in the second sense, it is 'palu 'kuduru. 'rend 'edlə 'bandlu means carriages (each) drawn by two bullocks, while 'rend 'edlə bandlu means two bullock-carts.

The final syllable of a Telugu word is generally unaccented; but if it is a significant particle, the secondary accent may fall on it. 'ka:ni (but), 'ka:ni: (let it be) are etymologically the same; ka:n means 'to become' and i: means 'give (thou)'. The ordinary Telugu man is quite ignorant of this derivation; but accentuates correctly to bring about the difference in meaning. The final i in ka:ni was originally i: but became short as it was unaccented. The final short, unaccented and therefore weak vowel disappears in liaison when followed by a word beginning with a vowel. 'va:du (he) + 'appudu (then) + 'undenu (was) = 'va:'dappu 'dundenu.

'atani (his) + 'odda (a particle denoting place) was in old Telugu 'atani 'jodda (with or near him) because i(j) was in old Telugu, a glide. In modern Telugu, such glides are disappearing. So, one would expect in modern Telugu, the form 'atanodda and so it is in the speech of some Telugus. In my speech as in the case of many others, a bilabial voiced fricative has developed before the initial back vowels o and u So, we hear, 'atani 'vodda 't a: ti (of palm) + 'a:ku (leaf) = t:ati'ja:ku = 'ta:,ta:ku. The

second form is of later Telugu and the se: sound is the result of the assimilation of a: with the palatal i.

In words where the first syllable has a short vowel and the second syllable has a long vowel the accent is on the second syllable:—su'ma:[from tsu:du-ma:look thou!], i'de: (Is it this for It is only this), kə'da: (verily, is it not f). The final vowel in such words is accented and strong and does not, therefore, disappear when it is followed by a word beginning with a vowel:—

'ni : v- 'inți- 'voddan-'unța: vu su'ma: 'ippude : you house near remain look! now only (= note)

'vasta:nu. i'de:—'atən(i)—'illu kə'da:—'ani I come this only his house verily that 'ne: n—'anu,konna:nu.

I thought

In the old Telugu form atoda (it is only he) the final syllable had the primary accent though it had only a short vowel but since the tendency is, in later Telugu, to shift the accent to the first syllable unless the previously accented syllable had a long vowel, atodo developed as a dialectal form, but the force of the particle a at the end of the word could not be brought out unless that vowel was clearly pronounced. Hence, has developed the modern form atode:

The old Telugu form ko'landi (of measurable capacity, size, number etc.; 'limited; little; few) has gradually undergone several modifications with the tendency to shift the accent to the first syllable:—ko 'lādi, 'koledi, 'koledi, 'koddi.'

The evolution of some of the modern from the old Telugu forms illustrates the gradual disappearance of the unaccented syllables. For want of space, I shall content myself with a few typical examples:—

^{1.} A few more similar examples are given under syncope below.

- Aphesis:—e'van*(he) (Prem. Dravidian) > e'vanu >
 (e) 'vandu > 'va: ndu > 'va: du > 'vadu¹
- 2. Apheresis:—wi 'la:ti (foreign from Hindusthani-wilāyati)
 lā: ti
- 3. Apocope: undedu adj. remaining, staying) > unde: ; 'unțini (I was) > 'unțin > 'unți > 'unți.
- 4. Sycope:—'moleke (sprout) > 'molke>'mokke;
 'ma: ninedi (is cured) > 'ma:nindi;
 'unnedi (is) > undi; 'kottine:va: de-nu

The syncope in the following words in due to the shifting of the accent to the first syllable:—'kalte from ke'lante (affliction); 'taltsu-,konu from te'lantsu,konu (to think about); 'anti-'pandu from e'nanti-'pandu (plantain-fruit).

The part played by accent in determining the rhythm of Telugu metres has been altogether ignored by the writers on Telugu prosody. So far as metres borrowed from Sanskrit are concerned, they have simply translated the rules laid down in the Sanskrit works; and so far as genuine Telugu metres are concerned, they have adopted the classes of gapams or feet arranged for Canarese metres and modified them in accordance with the structure of the Telugu verses they had before them. The classification of these gapams or feet shows however, that they had felt the force of accent in determining the rhythm; but they made no reference to it. Under Sūrya gapams, they provided for a trochee and a tribrach but not for an iambus; though it 'has three moras

^{1.} va:ndu from evan had developed before the tendency to shift the accent to the first syllable commenced.

^{2.} The earliest form is a compound 'ti:siti-vi + 'e:nin (removed-you+if) and was used in the second person singular; and after-vi (a suffix denoting second person, singular) was dropped, the later forms came to be used indiscriminately in every number and person.

^{3,} The development of koddi from kolandi is traced above,

or measures as the former two have. The exclusion of this kind of foot is, indeed, very significant because in the Telugu metres where these Sūrya gapams find a place, the first syllable of each foot should be accented and while it is possible to have an accent on the first syllable in the case of the two gapams included in the group, it is impossible to have the first syllable accented in an iambus.¹ But as the gapams are arranged with reference to quantity but not quality or accent, no safeguard is provided against the use of a foot of three short syllables in such a way that the first syllable of this foot may be the last syllable of a word and the second syllable may begin a new word. When used in this way, the foot is not a tribrach but practically an amphibrach with the middle of the three syllables having an accent. For example a poet held in high esteem by the advocates of classical Telugu composed the following line (vide Pracanda-Cānakya p.94).

'naruni | 'nuddhə | tə 'gati | ki 'rajə | mu gənu man high State quickly

This is a line which should, according to the rules of Prosody, contain five Sūrya gapams and as it has the required gapams, it is considered to be quite correct. But it runs like a piece of prose having no rhythm at all. I wonder if any could readily say to what kind of metre it might belong. The absence of rhythm is due to the displacement of accents in the third and fourth feet and the absence of any accent in the fifth foot. A secondary accent may be thrown on the second syllable in the fifth foot but that would only make it as bad as the third or fourth. Without altering the sense, it is possible to improve the rhythm thus:—

'naruni | 'goppa | 'dasəku | 'tvarita | 'gatini

Similarly the writers on Prosody have provided for six Indraganams, four of which have, each, five moras or measures.²

^{1.} This feature is noted in the case of Canarese more metres also. "Observe that no foot dare begin with an Imbusi. e. ——! Such a foot being foreign to true Canarese metres" vide Nagavarma's Canarese Prosody edited by Rev. F. Kittel, pp. 76 and 98.

^{2.} A short syllable has one mora or measure and a long syllable two moras or measures.

```
(1) — — (5 moras or measures) (ta-ganam) Antibacchicus
                                 (ra-ganem) Amphimacrus,
                   (4
    (3) - \sim \sim
                              (bha-ganem) Dactyl
    (4) - - - (5)
                              (sq-lam)
                                  (na-gəm)
    (5) \cup \cup \cup -

                           )
                              (ja-ganem) Bacchicus.
      or - - (5 ,, )
```

The first six feet may be indiscriminately used in some Telugu metres as they have a similar rhythmic character. The Canarese prosodists note the difference in the total number of moras or measures among these feet. For example, in a verse known as silsem while the Telugus use any of these six, the Canarese use the feet of only five moras as measures each and exclude the third and the sixth. In my opinion, their sissem is more rhythmical than the Telugu si:sem. The exclusion of the last two feet where the first short syllable is immediately followed by a long one is as significant as the exclusion of the jambus under Süryaganams. But as there is no reference to accent, it is possible, without violating the conventional rules, to compose a line in such a manner that the first short syllable of the fourth, fifth or sixth foot is the last unaccented short syllable of the previous word and the second syllable of the foot is the first accented short syllable of a new word; or that the last syllable of ____ begins a new word and is therefore accented. In either case the cast of accents does not harmonise with the cast of the feet and the line does not run well. The following lines satisfy the conventional rules of prosody but do not run well for reasons explained above.

- 1. 'janeni: 'ja | nekulu 'put | runeku 'jin | ne'tane (mother and father to son childhood)
 - 'mon | da vi'va : he | munu 'se:si | ne 'phale | mu 'gade at marriage of having done fruit is it not
- 2. 'kannu | le 'karevu | 'dire 'gan | ge 'ganu | gonti (of eyes want to remove water saw (I))

The first line belongs to a sissem and should have 6 Indraganams + 2 Süryaganams. The second line belongs to a telegical and should have 1 Süryaganam + 2 Indraganams + 2 Süryaganams. To maintain the rhythm, of which we can have an idea from the verses composed by good poets, each of the ganams should have run of the ordinarily the accent on the first syllable. In the case of the Indra ganams it may fall on the first or the third or both. In none of them should the second or the last have an accent.

With slight alterations the rhythm of these two lines may be improved thus: —

- (1) 'pitarulu | 'sutuneku | 'pinne'ka:l | | a:ne-vi |
 parents to son childhood-time

 'vā:hembu | 'se:sine | 'phalemu | 'ga:de
 marriage of having done fruit is it not ?
- (2) 'gangə | 'ganu-:gonti | 'kannu lə | 'karəvu | 'dirə water found (I) of eyes want to remove.

The metrical rule relating to a kind of verse known as Vrjebhegati-ragede says that every line should contain 28 morasor measures with a cassura after the 14th measure; but says nothing about the distribution of the longs and shorts or about the cast of accents. So, the line may vary from one of fourteen long syllables (amounting to twenty-eight measures) to twenty-eight short syllables. The following lines are all in accordance with the rule but no two are of the same rhythm and the last has no rhythm at all. They show how rhythm varies with accent:

- (1) 'cevini 'badinədi | 'celijə 'palukani |
 in the ear that fell friend's speech that

 'cilukə 'palukulək | 'alərə 'jendenu
 of parrot to words to be delighted began
- (2) 'cilekele | 'pālukulu | 'vinebade 'ga: | of parrots words are heard when

'celi 'palu | 'kani 'bhrame | 'padenu gə 'da: | friend's word that surprised fell verily

- (3) 'cilekele | 'palukulu | 'vinin-'antan |
 of parrots words as soon as heard
 'celi palk- | 'anije: | 'bhrame 'nonden |
 of friend's word that indeed surprise got
- (4) 'oke 'ciluke | 'paluku 'vini | 'talacen |
 one parrot's word having heard thought.
 'oppüga: | 'celi paluke ' 'janetsun
 rightly friend's word saying
- (5) 'cileke 'palukulu 'vin-n'antene:
 parrot's words as soon as heard
 'celje: 'paliken 'ani 'talecinedi
 friend only spoke that (she) thought

According to the metrical rule all these are known as lines of vrfabhagati-ragada; but I would give each of the first four a separate name and refuse to accept the fifth as a line of poetry as there is no definite rhythm in it.

The Telugus have borrowed the Sanskrit Vrttams and Arya metres and have adopted the metric rules given in Sanskrit works on Prosody. But neither the classification of Vrttams nor the Scansion has any relation to the rhythm in them. A line is scanned not into rhythmic feet but into feet each of three syllables. The cast of ganams or feet prescribed for a kind of verse does not determine the rhythm. For example the Halamukhi Vrttam is defined as a verse of four lines, each having ra-ganam, na-ganam and sa-ganam i.e.

The Telugu verse given in an authoritative work on Prosody, to define and illustrate this kind of verse runs thus:—

kinkeri: kṛte sure vara: paŋkeja:te dale najena: poŋkemau ra-na-sa-gaṇamul śaŋke le:ke halemukhi-kin It is impossible to determine the rhythmic nature of this kind of verse from the definition and illustration given here. On experimenting I have found that the cast of longs and shorts given here lends itself to four varieties of rhythm and I illustrate them below:—

(N. B. The order of longs and shorts is the same in every line given below.)

- 'sauri' 'muddu 'paluku vi'nan
 'sauri 'mo: mu 'sogasu ga'nan
 'sauri 'to: den 'epudu c'anan
 'go:ru 'tsundu 'madini se'do:
- 'sauri 'pa: tələnu 'vinuma:
 'sauri 'ru: pəmunu 'ganuma:
 'sauri 'centəkunu 'januma:
 'sauri 'cittəmunən 'iduma:
- 'sauri 'pa:təlu 'vinutəkun
 'sauri 'ru:pəmu 'ganutəkun
 'sauri 'centəku 'janutəkun
 'go:ru 'cundonu 'manəmunən
- 'nja: jəma: 'prija 'nuduvuma:
 'pre: jəsin 'nanun adəvilo:
 'ba: jude: 'ninu vedəkutsun
 'ro: jəde: 'madi paguləga: n

The orthodox scholar would call every one of these verses a Halamukhi Vrttam and scan every line in the same way as is indicated in the definition; but I should like to give each a separate name and scan the lines in the way indicated above. The difference in rhythm should be explained with reference to the changing position of the accents.

^{*} For the palatal in Sibilent in Sanskrit words I have used this symbol \$

The Telugu Kandam is based on the Sanskrit Arya metre. It consists of four lines, the first and third of which are shorter, each containing three feet and the second and fourth are longer, each containing five feet. Ganams of four measures each, only, are to be used. There is, further, a restriction regarding the use of the amphibrach. It should be avoided in the first and third ganams of lines 1 and 3 and in the second, fourth and fifth ganams of lines 2 and 4. The third ganams of lines 2 and 4 should be either an amphibrach or a foot of four short syllables. But as there is nowhere any reference to accent, no safeguard has been provided againt the abuse of a ganam of four short syllables. line may be composed in such a way that the first syllable of a ganam of four short syllables is the last syllable of a previous word and the second syllable begins a new word. Such a ganam has the same rhythm as an amphibrach. For example if in 'Va: ni'paluku, ni'paluku is taken as a ganam of four short syllables it has the same rhythm as an amphibrach like ni'palku in 'Va: ni palku (palku is a variant from paluku-vide examples under Syncope). So, if such a ganam of four short syllables with accent on the second syllable is used in a place where the amphibrach should not be used, there is a practical, though not a theoretical, violation of the rule. The following lines illustrate the point.

- (1) 'varjemu | 'kurisine | di'ga:ne
- (2) 'varjemu 'kurisine | di'ganuke

The orthodox scholar would condemn the first line and accept the second line if they were used as the first or the third lines of a Kandam because the amphibrach comes in the third foot where, according to the metrical rule, it should have been avoided; but a ganam of four short syllables, whatever be its nature, is not so excluded. But I would condemn this ganam because it has an accent on the second syllable and is, therefore, as out of place as an amphibrach in this particular place. With a slight alteration the rhythm of the line may be improved thus;—

varjemu | 'kurisenu | 'ganukenu

Similarly, I would condemn the use of a ganam of four short syllables where the second has no accent, in the third foot of line 2 or 4, because that is the place reserved for a ganam of four short syllables or an amphibrach and the ganam of four short syllables should be of the same rhythm as an amphibrach. The orthodox scholar would condemn the first and accept the second of the following lines, if they are the second or fourth lines of a Kandam, because in the first of the following lines, an amphibrach is used in the second foot where it should have been avoided and in the third foot, a dactyl is used while an amphibrach or a ganam of four short syllables should have been used according to the metrical rules:—

- (1) 'ninu 'ne: | nu 'goltu | 'nepdunu||'ninne: | 'talatun.
- (2) 'ninu ne: | nu 'golutu | 'nepudunu||'ninne: | 'talatun.
 you I worship always you only I think of

But I would condemn both because nu'golutu and 'nepudunu, though they are each a ganam of four short syllables and can, therefore, be indiscriminately used according to the metrical rule, are respectively of the same rhythmic effect as nu'goltu and 'nepdunu and if in the first of the above two lines the metrical rule is theoretically violated, in the second, it is practically so. With slight alterations, the rhythm of the line may be improved thus:—

'ninu 'ne: | 'nirətəmu | nu 'golutu | 'ninne: | 'talatun you ,I always worship you only I think of By using the ganams of four short syllables, each with varying accent, it is possible to compose Kandams of varying rhythm':—

- 1. 'ciluke | 'paluku | 'cevini | 'badine | parrot word in the ear as it fell
- 1. The idea contained in the verses is the same: "Hearing the parrot's voice a lover thought it was his sweetheart's and called to her; but the parrot cried as if it meant to say it was not".

- 'celije | 'palike | -n-'anutsu | 'daleci | 'celini | 'biluve | -'ga:
 friends spoke saying having thought friend called while
 ciluke | 'japudu | palike-n-'ateni |
 parrot then spoke his
 'celije | 'paluku | 'gg:d-e | 'tantsu | 'ceppu | -n-'atulu | :-ga
 friend's word not saying in form like
- 2. 'ciluke | palukulu|| 'vinine | d'ane

 'celi|| 'palike | -n-'ani 'madi|| 'daleci | 'celija: || 'janega :

 'ciluke | 'jappudd || 'palike 'ni :

 'celi||-j-'etseje | 'gale 'dani || 'celije | 'citteme || 'larpan
- 3. 'celi 'paluke | 'jagu-n-'anutsu | -n-'oke

 'ciluke | 'paluku 'vini | 'madidaleci | 'nilici 'cane- | ga :

 'celi-j-'etsețe- | n-'unned-'ani | j-a :

 'ciluke | | j-'oke 'taruvu | 'paji'ni lici' | ce :se 'rute | mun

The first runs with three-measure-ganams; the second with (3+4) seven-measure-ganams and the third with five-measure-ganams.

The following verse has no rhythm at all as the cast of accents is not based on any principle:—

'vanəmu 'nadumənu vi'se: jə 'ra məni: jəmul-'agu 'tarulənu 'suməmulə-n'etulə 'ce: seno 'gadə 'ja: 'brahmə 'jani 'kadu n-'alərutsund' əgə va'santudu 'pilice 'nannuun

The orthodox scholar would acceept all these verses as Kandams because every one of them is in accordance with the metrical rules. But I would discard the last as no verse and give each of the first three a separate name.

The following line may be scanned according to the conventional method either as a line of telegilti or as a line of dvipade:—

- (1) 'de: ve | ki: 'sutu | d.'ante 'de: | di: pje'maine
- (2) 'de: veki: | 'sutud 'ante | 'de: di:pje | 'ma: ne

But the scansion as a line of dvipade (3) Indra-ganams + 1 Sūrya ganam) agrees with the cast of accents and is, therefore, natural as is shown in the second example given above but the

scansion as a line of Tetagsti (1 Sūrya gaņam + 2 Indra gaņams + 2 Sūrya gaņams) does not agree with the cast of accents and is, therefore, quite artificial and conventional for a line of this type.

The examples shown above are, I hope, clear enough to convince the reader, whether he knows Telugu or not, that the conventinal method of scansion has no reference to rhythm; that the existing metrical rules are not adequate enough to determine the rhythm of a verse; that the rhythm varies with accent as well as the number of measures and that the natural scansion should be made with reference to the cast of accents in a line.

Linguistic Society of India. RULES RELATING TO MEMBERSHIP AND SUBSCRIPTIONS

- 4. The membership will be open to those who are interested in Linguistic Studies and Research specially with reference to India.
- 5. There will be two classes of members: active and ordinary. Active members will pay Rs. 24 and ordinary members Rs. 12 as yearly subscription payable in advance on the 1st day of January of each year. Members who join after the 1st June will pay half-yearly subscription only for the year they join (i. e. Rs. 12 or Rs. 6, respectively.)

Libraries and other institutions will have to pay Rs. 12 as yearly subscription.

Student-members will be admitted on a subscription of Rs. 6 per annum. Any member can have his subscription compounded for life by becoming a life-member, if he pays Rs 100 at a time or Rs. 75 if he is already a Founder or a Donor.

- 6. The ordinary members will receive the Bulletin of the Society free of charge and other publications at concession rates. The active members will get free of charge all publications of the Society.
- 9. Any member whose subscription remains unpaid by the 1st of February of the year in which it is due, shall be reminded of his default twice within the first quarter of the year. If no notice is taken of these reminders, the matter will be referred to the Executive Committee by the Honorary Treasurer.
- 11. Members who pay an initial subscription of Rs. 50 upto the end of 1930 will be designated as Founders of the Society. They will not have to pay the annual subscription for the year in which they enroll themselves as Founders.
- 12. Members who after the 1st of January 1931 pay a Donation of Rs. 50 or more will be designated as Donors of the Society. They will not have to pay the annual subscription for the year in which they enroll themselves as Donors.
